

**EXHIBIT 3**

**DC VOLTAGES AND CURRENTS INTO FINAL RADIO AMPLIFYING DEVICE**

As required by § 2.1033(c)(8), presented in Table E3.1 are the DC voltages applied to and the corresponding DC currents into the final RF power amplifier, over the entire range of nominal RF output powers that the Core Engine normally operates.

Table E3.1. Final power amplifier—DC voltages and currents

| Nominal<br>Output Power<br>(dBm) | Final PA                |                          |
|----------------------------------|-------------------------|--------------------------|
|                                  | Input Current<br>(Amps) | Input Voltage<br>(Volts) |
| 30                               | 1.805                   | 2.869                    |
| 28                               | 1.422                   | 1.941                    |
| 26                               | 1.102                   | 1.941                    |
| 24                               | 0.875                   | 1.600                    |
| 22                               | 0.711                   | 1.313                    |
| 20                               | 0.602                   | 1.077                    |
| 18                               | 0.515                   | 0.883                    |
| 16                               | 0.445                   | 0.737                    |
| 14                               | 0.398                   | 0.613                    |
| 12                               | 0.375                   | 0.521                    |
| 10                               | 0.352                   | 0.451                    |
| 8                                | 0.320                   | 0.391                    |
| 6                                | 0.305                   | 0.343                    |
| 4                                | 0.297                   | 0.297                    |
| 2                                | 0.281                   | 0.263                    |
| 0                                | 0.250                   | 0.213                    |
