

Circuit Description MSD3009 Transmitter

9 V battery power supply voltage be stabilized and smoothing by combination of R6, D1 and C7, and then power supply for block TX-2B, and power supply for Q1, Q2.

Oscillation circuit is composed of Q2, C6 and crystal, port 8 of block TX-2B will output code signal when press button, code signal and 27.145 MHz carrier are modulated by Q1, and then transmit with C2 and L1.
