Office of Equipment Authorization
Federal Communication Commission

To Whom It May Concern:

This letter will address the request for the emission designator and other aural data for the FCC ID PW2U106T-PRO application. Please add this information to the appropriate places on the 731 form.

The frequency range of operation is 470-806 MHz. The power level range is from 3 watts to 11 watts. The emission designator that applies to the aural part of this equipment is 250kF3E. Since this equipment upgrades translator equipment, no frequency tolerance information is required as documented in the letter elsewhere in the application by Richard Fabina of the FCC.

Sincerely,

Gregory L. Best
