## FCC PART 22H AND PART 24E TEST REPORT

Applicant	Wilson Electronics, Inc.
Address	3301 E. Deseret Drive St. George, Utah 84790 USA
FCC ID	PWO271201SA
IC Label	IC: 4627A-271201SA
Model Number	271201
Product Description	Wireless Dual-Band Cellular/PCS Amplifier
Date Sample Received	August 7, 2008
Date Tested	August 28, 2008
Tested By	Nam Nguyen
Approved By	Mario de Aranzeta
Report No.	886XAUT8TestReport.pdf
Test Results	<input checked="" type="checkbox"/> PASS <input type="checkbox"/> FAIL

THE ATTACHED REPORT SHALL NOT BE REPRODUCED EXCEPT IN FULL  
WITHOUT THE WRITTEN APPROVAL OF TIMCO ENGINEERING, INC.

Certificate # 0955-01

## ATTESTATION STATEMENT

Certificate # 0955-01

This equipment has been tested in accordance with the standards identified in this test report. To the best of my knowledge and belief, these tests were performed using the measurement procedures described in this report. All instrumentation and accessories used to test products for compliance to the indicated standards are calibrated regularly in accordance with ISO 17025 requirements.

I attest that the necessary measurements were made, under my supervision, at TIMCO ENGINEERING, INC. located at 849 N.W. State Road 45, Newberry, Florida 32669.

Authorized Signatory Name: Mario de Aranzeta

Signature: On File

Function: Engineer

Date: 1/2/2009

Test technician name: Nam Nguyen

Date: 1/2/2009

## REPORT SUMMARY

Disclaimer	The test results relate only to the items tested.
Report Purpose	To demonstrate the unit comply with FCC Part 22H and Pt 24 and Industry Canada RS-131 requirements for a PCS/Cellular amplifier.
Applicable Rule Part(s)	Pt 22, Pt 24, Pt 15.109, RSS-131, ICES-003, ANSI C63.4: 2003, ANSI/TIA-603-C: 2004
Related Test Report	886BUT8TestReport.pdf (RSS-131)

## TEST ENVIRONMENT

Test Facilities	All required tests were performed by Timco Engineering Inc. that is located at 849 NW State Road 45 Newberry, FL 32669.
Test Conditions	Temperature: 26°C Relative Humidity: 50%

## TEST SETUP

Deviation to the rules	There was no deviation from the test standards.
Modification to the DUT	No modification was made to the DUT.
Test Exercise (e.g. software description, test signal, etc.)	The DUT was placed in continuous transmit mode of operation.
Supporting Test Equipment	<p>Manufacturer: Agilent</p> <p>Description: Dual-mode baseband generator (arbitrary waveform and real time I/Q) 250 kHz to 6 GHz</p> <p>Model Number: E4438C</p> <p>Cal Date: 01/31/06</p> <p>Cal Due Date: 01/31/08</p>

## DEVICE UNDER TEST INFORMATION

Manufactured by	Willson Electronics
DUT Description	PCS/Cellular Smart Amplifier
FCC ID	PWO271201SA
IC Label	IC: 4726A-271201SA
Model Name	271201
Operating Frequency	Uplink 824 – 849 MHz Downlink 869 – 894 MHz Uplink 1850 – 1910 MHz Downlink 1930 – 1990 MHz
Maximum Output and Input Power Rating per manufacturer spec	Uplink: 2.30 Watt Downlink: 0.016 Watt
Emission Designators	F9W (CDMA), GXW (GSM), F1D(AMPS), GXW (EDGE)
Modulation(s)	CDMA, GSM, EDGE, FM, HSPA, EVDO
User Power Range & Control	There are NO user power controls
Test Item	Production
DC Voltage and Current into final amplifier	Power Into Final Amplifier (uplink) Vcc = 6 VDC, 1.2 A Power Input (downlink) Vcc= 6Vdc, 0.67A
Type of Equipment	Fixed and Mobile
Antenna Connector	Fixed Applications: N-Type Mobile Applications: FME

## TEST PROCEDURE

### RF Power Output

RF power is measured by connecting a 50-ohm, resistive wattmeter to the RF output connector. With a nominal voltage and the amplifier properly adjusted the RF output measures.

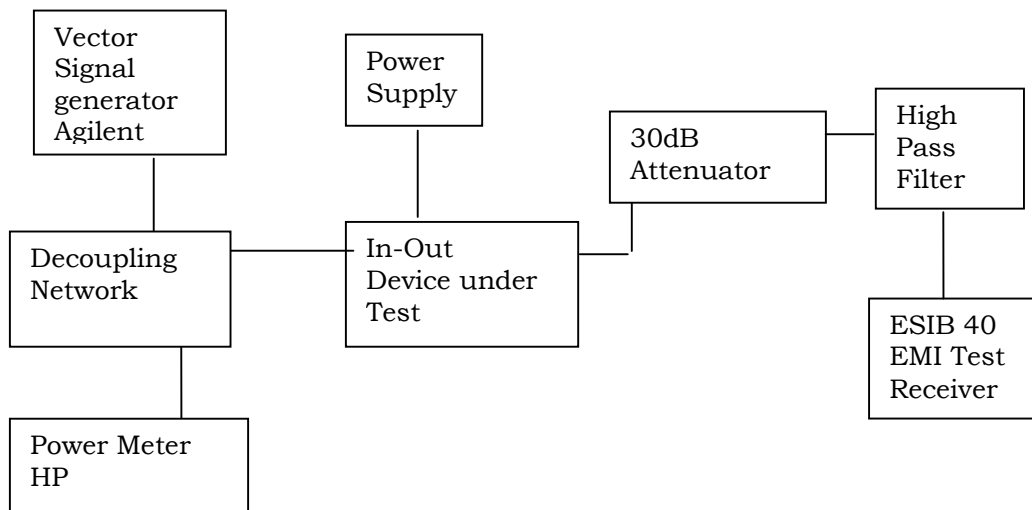

RF Output Power Test Setup Diagram

### Input/Output Modulated Amplitude Comparison And Band-Edges Compliance

On the following plot, the reference level was calibrated using a resolution bandwidth wider than the emission bandwidth. First the gain was measured for the maximum output power. Then for each frequency and type of modulation, an attenuation equals to the gain of the amplifier was added on the measurement side of the amplifier, as to overlay the input versus output modulated envelope.

Test Setup Diagram

[Continued]

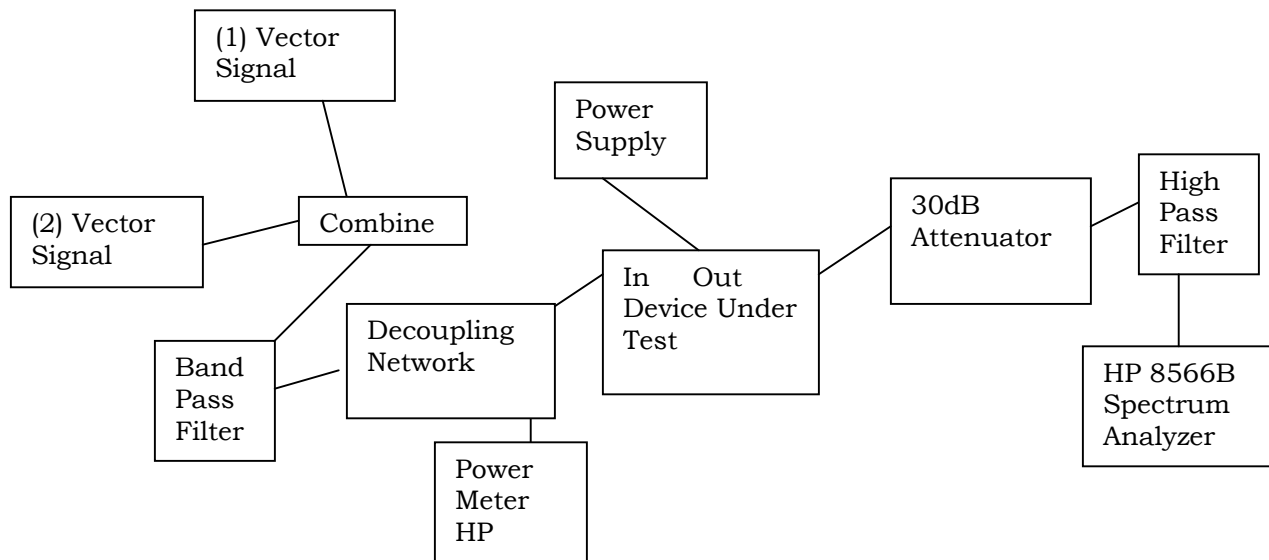

**Intermodulation Product Spurious Emissions**

The procedure used was ANSI/TIA-603-C: 2004. The spectrum was scanned from 9kHz to at least the tenth harmonic of the fundamental using a HP model 8566B spectrum analyzer.

The modulation type was tested using the two-tone / three tone test method. The input power to the amplifier was set at maximum drive level by combining the two tones. The two tones were chosen in such a way (1) the third order intermodulation product frequencies are located within the pass band of the DUT and (2) they produce the worst-case emissions out of band.

Setup Diagram

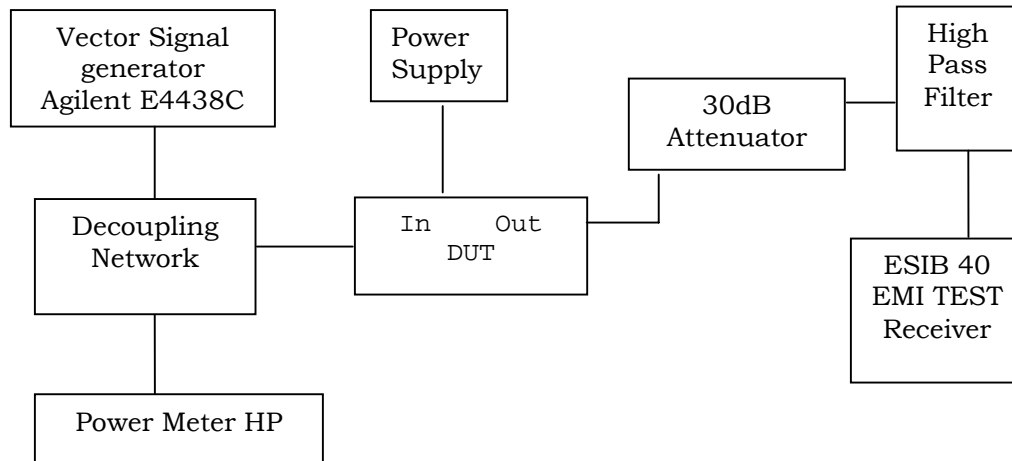

**Spurious Emissions at Antenna Terminals**

The procedure used was ANSI/TIA-603-C: 2004. The spectrum was scanned from 9kHz to at least the tenth harmonic of the fundamental using a HP model 8566B spectrum analyzer.

Data on the following page shows the level of conducted spurious responses. For analog modulation, the carrier was modulated 100% using a 2500 Hz tone. For digital modulation, the carrier is modulated to its maximum extent. The spectrum was scanned from 9kHz to at least the 10th harmonic of the fundamental. The measurements were made in accordance with standard ANSI/TIA-603-C: 2004. The maximum input power was set for each test.

[Continued]

Conducted Spurious Emissions Test Setup Diagram

**Radiated Spurious Emissions**

The spectrum was scanned from 30 MHz to at least the tenth harmonic of the fundamental. The CW signal was used to perform this test. This test was conducted per ANSI/TIA-603-C: 2004 using the substitution method.

Radiated Spurious Emissions Test Setup Diagram

Equipment placed 80 cm above ground on a rotating table platform.

**RF POWER OUTPUT**

**Rule Part(s) No.:** Pt 2.1046(a)

**Requirements:** Pt 2.1046(a)

**Test Result:** As the following table indicates. Notes: the maximum power output value was obtained with CDMA modulation at 836.5MHz and 1960MHz.

Test Data Table 1 – Output Power – CDMA 1900 – Uplink/Downlink

Tuned Frequency (MHz)	Power Input (dBm)	Power Output (dBm)	Power Output (mW)	Tuned Frequency (MHz)	Power Input (dBm)	Power Output (dBm)	Power Output (mW)

893.80	-39	7.86	6

## **INPUT/OUTPUT MODULATED AMPLITUDE COMPARISON AND BAND-EDGES COMPLIANCE**

**Rule Parts No.:** Pt 2.1049, Pt 2.1051, 22H, 24E

**Requirements:** The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P)$  dB.

**Test Data:** The DUT appears to meet the requirements.

Bandedge compliance: Measurements were performed in accordance with Part 24.238

The Reference level on the following plots was calibrated using a 3MHz RBW=VBW.

Compensating for RBW (1%) using  $10 \log(12.5/3) = 6.2$  dB we get the following amplitudes at the bandedge:

Test Data Table 10 – CDMA 1900 – Uplink/Downlink

Channel (MHz)	Bandedge Frequency (MHz)	Amplitude bandedge (dBm)	Limit (dBm)	Margin (dB)
1851.25	1849.91	-24.72	-13	11.72
1908.75	1910.04	-25.09	-13	12.09

## **INTERMODULATION PRODUCT SPURIOUS EMISSIONS**

Rule Parts No.: Pt 2.1051

**Requirements:** Emissions must be  $43 + 10 \log (P_o)$  dB below the mean power output of the transmitter or below the  $-13\text{dBm}$

All the modulation types were tested using the three tone test method. A CW signal was use instead of GSM, EDGE, and F1D modulations. EDGE and GSM provided the same test results and only GSM data are presented in this report. The input power to the amplifier was set at maximum drive level by combining the three tones. The three tones were chosen in such a way (1)the third order intermodulation product frequencies are located within the pass band of the DUT and (2) they produce the worst-case emissions out of band.

**Test Data:** The DUT appears to meet the requirements.

Date: 8.SEP.2008 14:09:44

## SPURIOUS EMISSIONS AT ANTENNA TERMINALS

**Rule Parts No.:** Pt 2.1051

**Requirements:** Emissions must be  $43 + 10\log(P_o)$  dB below the mean power output of the transmitter:

$$1850 - 1910 \text{ MHz: } 43 + 10\log(1.00) = 43 \text{ dBc}$$

$$1930 - 1990: 43 + 10\log(0.03) = 28 \text{ dBc}$$

**Test Result:** The DUT appears to meet the requirements.

## FIELD STRENGTH OF SPURIOUS EMISSIONS

**Rule Parts No.:** Pt 2.1053

**Requirements:** Emissions must be  $43 + 10\log(P_o)$  dB below the mean power output of the amplifier:

$$43 + 10\log(1.00) = 43 \text{ dB}$$

$$43 + 10\log(0.032) = 28 \text{ dB}$$

**Test Result:** The test data indicates the DUT meets the requirements
