Tuning and Adjustment of Wilson Model 277180 Signal Booster

There are no external tuning adjustments. The installer selects the desired channel and adjusts the gain of the booster as explained in pages 11 through 14 of the User Manual. These adjustments are “fail safe” to prevent interference with cellular systems. If the adjustments are not made properly, the amplifier will either shut off or reduce its gain. Indication of these less than optimum conditions is evident by the booster’s indicators (i.e. LED light and LCD panel).

Sincerely,

A handwritten signature in black ink that reads 'Richard M. Kline'. The signature is written in a cursive style with a large, prominent 'R' and 'K'.

Richard M. Kline  
Senior Electrical Engineer
