CT Project: P1350025

From: John Erhard

Date: December 2, 2013

1. No test setup photos were provided. Please provide them for the review on all projects.
[CT – Test Photos exhibit provided.](#)
2. Occupied bandwidth plots on page 10 do not use the same RBW.
[CT – Retook plot for page 55, changed report to rev 4.](#)
3. Note to laboratory – Input OCC BW plots on page 64 have very little dynamic range shown and it is difficult to ensure proper linearity in this condition. The associated output plot does show a very clean signal so in this case no re-testing is required but be advised that without sufficient dynamic range this could reviews in subsequent devices could be affected.
[CT – Acknowledged about the dynamic range, next time I will use pre-amp.](#)
