April 1, 2019 Subject: RF MPE EXPOSURE Re: FCC ID: PWO 460044

To Whom It May Concern:

The MPE calculations for model 460044 signal booster were done for each frequency band: 700 MHz Band 12, 700 MHz Band 13, 800 MHz, 1900 MHz, and 1700/2100 MHz. For each band one calculation was done; this included an outside antenna, and an inside antenna that may be connected to this signal booster. The order of the attached calculations is as follows:

700 MHz Band 12:	
1. Inside Antenna: 314440-0630	2. Outside Antenna: 314411-40075
700 MHz Band 13:	
1. Inside Antenna: 314440-1160	2. Outside Antenna: 314445-100100
800 MHz band:	
1. Inside Antenna: 314440-0630	2. Outside Antenna: 301111-400170
1900 MHz band:	
1. Inside Antenna: 309902-75F	2. Outside Antenna: 314473-0640
1700/2100 MHz band:	
1. Inside Antenna: 304412-40010	2. Outside Antenna: 314453-40075

A booster's uplink power must not exceed 1 watt equivalent isotropic radiated power (EIRP) for each band of operation. Composite downlink power must not exceed 0.05 watt EIRP for each band of operation (20.21(e)(8)(i)(D)). The following formula was used to calculate the equivalent isotropic radiated power:

EIRP= Power Out (Watts)*Duty Cycle Percent*Antenna Gain (non-log)*Coax loss (non-log)

The power density (mW/cm²) is calculated using the following formula:

Calculated Power Density=1000*EIRP (Watts)/($4^{\pi*}$ (Distance from Antenna (cm)^2))

Sincerely,

Patrick Cook CTO

700 Band 12 Downlink

INPUT DATA

Frequency MHz	728
Pout Watts	0.01514
Duty Cycle Percent	100.0%
Ant. Gain dBi	3.76
Coax Loss dB	0.00
Distance From Antenna In cm	20.3

RESULTS OF CALCULATIONS

Ant. Gain less Coax Loss dBi	3.76
Distance From Antenna In Inches	8.00
