

Tune-up Procedure and DC Voltages

2.1033(c)(8)

Question: The dc voltages applied to and dc currents into the several elements of the final radio frequency amplifying device for normal operation over the power range.

Uplink: 5VDC @ 300mA to 1.5A. Downlink: 3.6VDC @ 50mA

• **2.1033(c)(9)**

Question: Tune-up procedure over the power range, or at specific operating power levels.

NA – There are no adjustments to be made by the user of this equipment. Everything is internal and factory adjusted.
