RX SPURIOUS EMISSION

Test of: SIEMENS A56, IMEI: 001002000132683

Date of Test: 10/09/02

Lab:

Siemens
Information and
Communication Mobile LLC
16745 West Bernardo Drive
Suite 400
San Diego, CA 92127

Tested by: Milton de Leon

Checked by: 
Peter Nevermann

1 INTRODUCTION

THIS DOCUMENT SHOWS THE PERFORMANCE OF A56 SIEMENS MOBILE PHONE, REGARDING TO SPURIOUS EMISSION ON RX FREQUENCIES DURING OPERATION AT GSM850 BAND.

2 TEST SET UP

2.1 Equipment Description

1. FSEM 30 – Spectrum Analyzer 20Khz to 26.5Ghz RODE&SCHWARZ	Serial No. 100024 Calibration Report No. 85639
2. 8652A – Power Meter Giga-tronics	Serial No. 8650929 Calibration Report No. 85605
3. 80420A – Power Sensor Giga-tronics	Serial No. 1834334 Calibration Report No. 85606
4. CMU-200 – Radio Communication Tester RODE&SCHWARZ	Serial No. 100432 Calibration Report No. 85612
5. 85902A – Burst Carrier Trigger Agilent	Serial No. 3308A01293 Calibration Certificate No. N/A

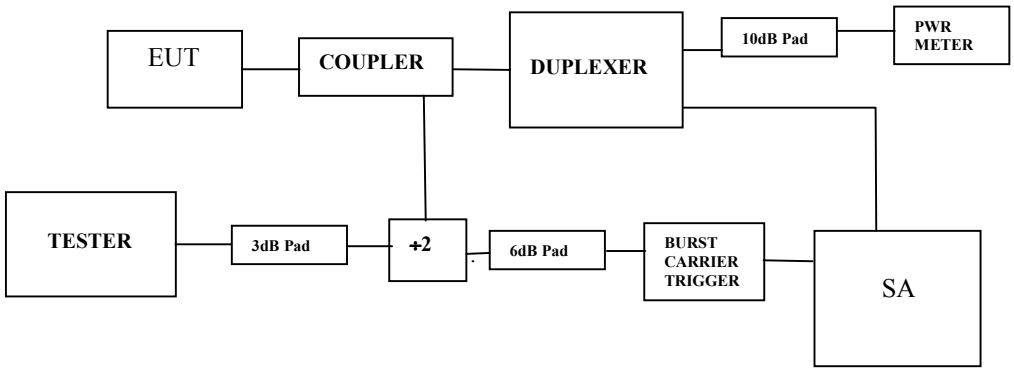
2.2 Accessories

1. 4226-20 – Directional Coupler 0.5 to 18Ghz Narda Microwave
2. WD-00003 – Duplexer Filter Lorch Microwave
3. 6B5W – 5Watts 10 dB Attenuator INMET
4. 15542 – Power Splitter Mini-Circuits
5. MCL BW-S3W2 3dB Attenuator
6. MCL BW-S3W2 6dB Attenuator
7. Coaxial Adapters (several)
8. Coaxial Cables (several)

2.3 Equipment Under Test

A56 Siemens Mobile Phone	IMEI No. 001002000132683

2.4 Test Set –up Block Diagram



3 TEST DESCRIPTION

3.1 Equipment settings

CMU200 – Communication Tester	GSM850 Signaling Mode/Default settings RF Attenuation = according total set-up losses
FSEM – Spectrum Analyzer	Frequency: 869 Mhz to 894 Mhz RBW: 30 kHz (Manual) VBW: 30 kHz (Manual) Sweep: Auto selected (70ms) Detector: Sample Trace: Averaging over 200 cycles Trigger: pulsed, gated to transmit pulse Offset: according total set-up losses
8652A Power Meter	Sensor Set-up: Burst Average Power Offset: according total set-up losses

3.2 Test procedure

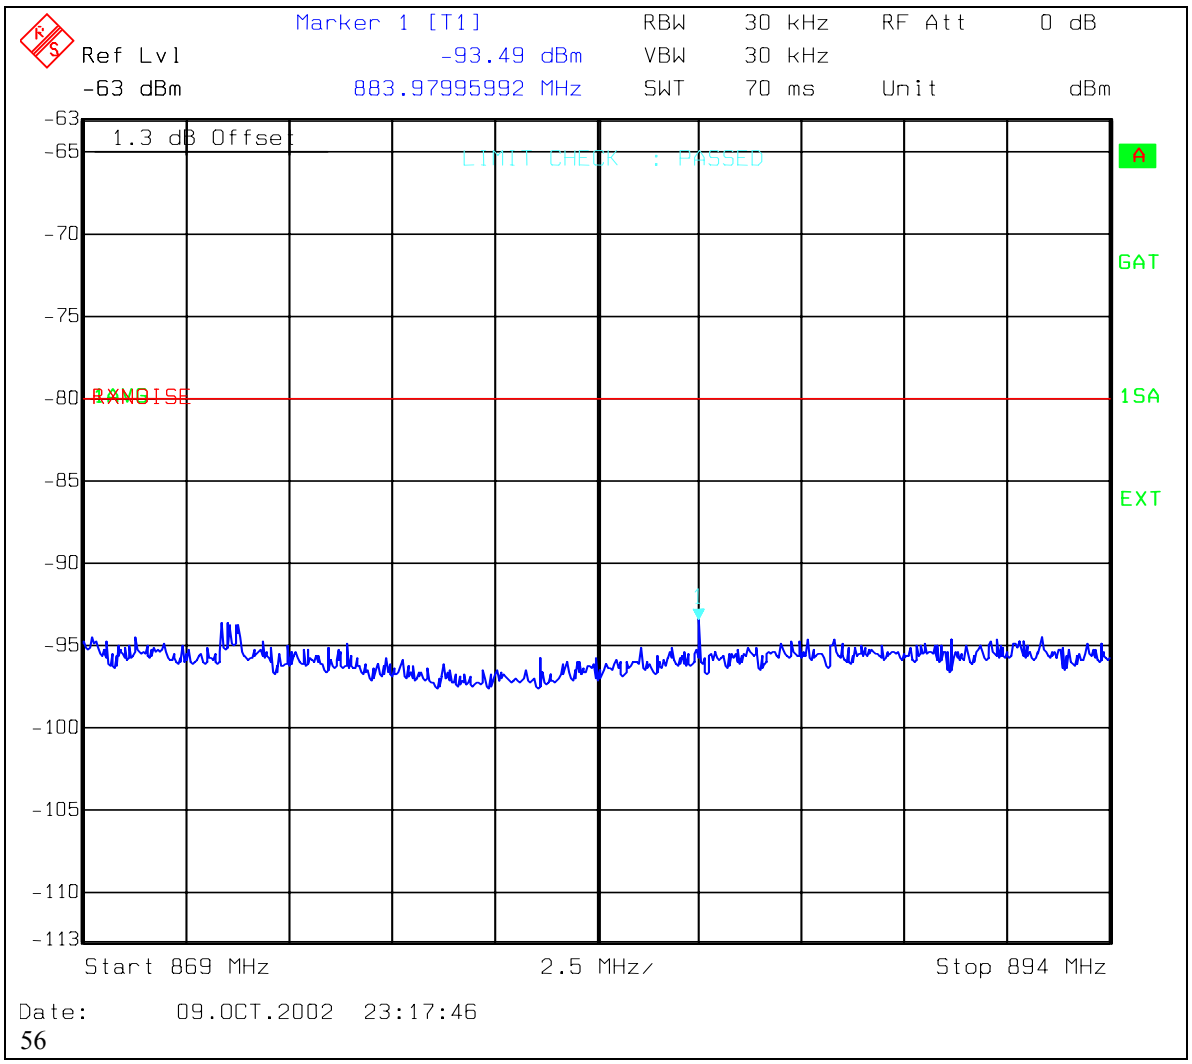
- Use the CMU200 as a base station and the MMI to establish a call with the EUT.
- Set the EUT power level to PCL=5 (Unit operates approximately at +32.0 dBm at this power level)
- Set the Tx channel No. to 128 (824.20 Mhz)
- Measure the Spurious emission at RX Band with the Spectrum Analyzer
- Repeat the procedure for TX channel No. 190 (836.60 Mhz) and 251 (848.80 Mhz)

3.3 Specification

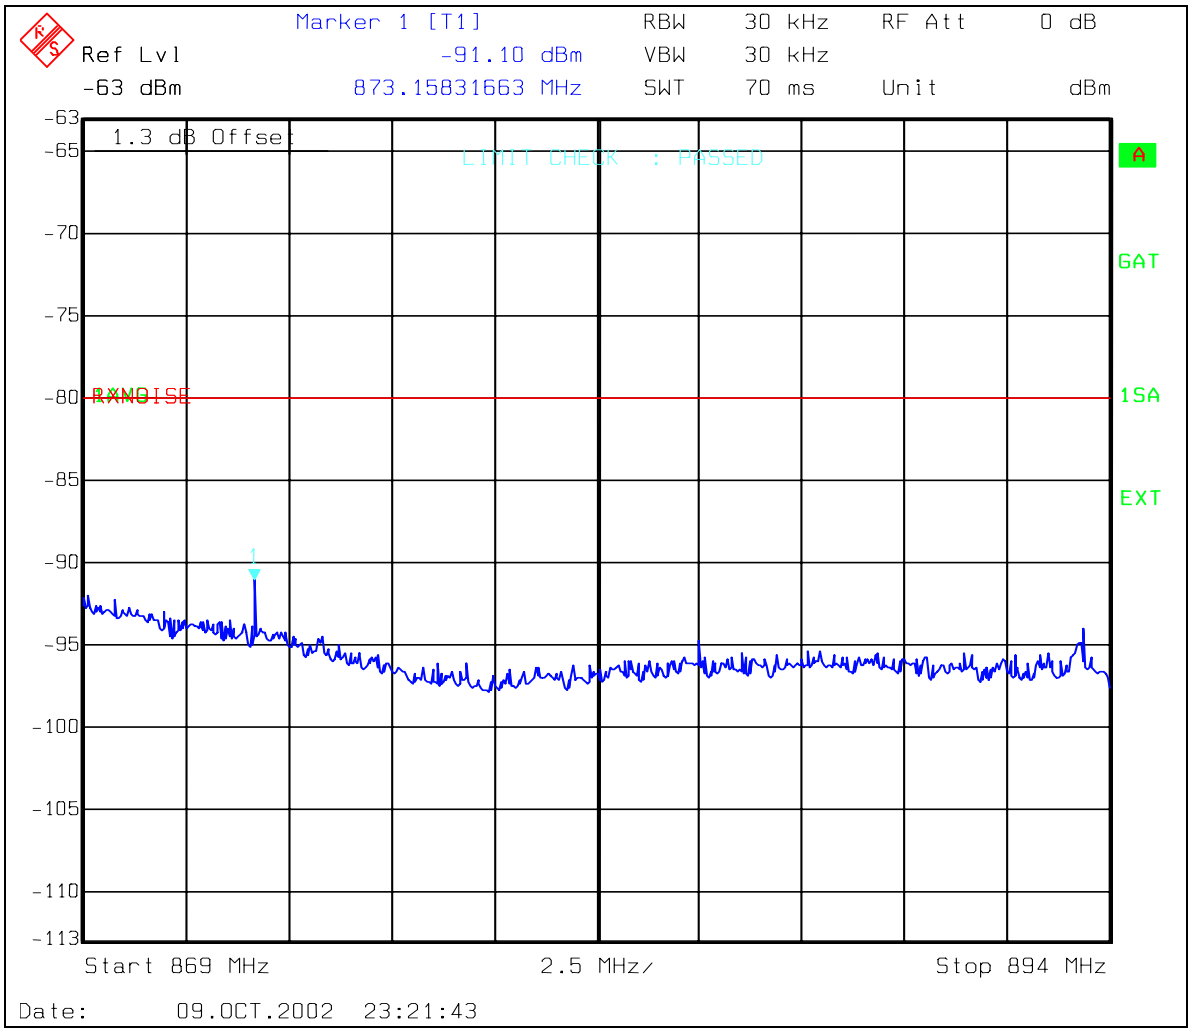
- The power level of any emissions at the receive band, measure with 30Khz RBW, shall not exceed -80dBm.

4 Test Results

4.1 Spurious emission at TX Channel 128 (824.20 MHz)



4.2 Spurious emission at TX Channel 190 (836.60 MHz)



4.3 Spurious emission at TX Channel 251 (848.80MHz)

Frank,

It was good talking to you yesterday. I appreciate your help in resolving this question regarding the correct test method for Part 22.917(f). My client must make a design decision tomorrow and after that it will be very difficult and expensive for them to change the design. Therefore, assuring that they correctly understand this test is important to them.

Attached is a memo giving a detailed description of the test method being used implementing the averaging, per our conversation yesterday. Test results from this product are included that show a little over 3 dB of margin using this test method.

I will look forward to your reply. If you want to discuss this further please feel free to call me at 512-864-3365.

Best Regards,

Stephen Berger

Test Method described in Part.zip:

"Based on this rational, we would ask if you agree that the correct measurement settings for the 22.917(f) test are as follows:

1. Limit Line = -80 dBm
2. Detector = Sample
3. Trace = Averaging over time for 200 cycles
4. Sweep Time = Auto selected (approx. 140 ms)
5. Trigger = pulsed, gated to transmit pulse
6. Bandwidths, RBW = 30 kHz, VBW = 30 kHz or greater
7. Transmit Channels (Frequencies) = Measure at low, mid and high channels."
