1 General Information

1.1 General Description

The equipment under test (EUT) is a superregenerative for 1:6 Dub City RC car. Operating at 49.860MHz which is controlled by LRC circuit. The EUT is powered by a 9.6V rechargeable battery. When it switches on, it will receive a different radio signal from the transmitter continuously.

The brief circuit description is listed as follows :

- Q1 and associated circuit act as superregenerative receiver.
- IC1 and associated circuit act as remote control decoder.
- IC2 and associated circuit act as single channel voice IC.
- IC3 and associated circuit act as low voltage audio power amplifier.
- Q9-Q14 and associated circuit act as current driver of the left and right motors.
- Q22-Q25, RL1-RL4 and associated circuit act as current driver of the forward and backward motors.

2 Description of the radiated emission test

2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is place 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

A signal generator was used to radiate an unmodulated continuous wave (CW) signal to the EUT (superregenerative receiver) at its operating frequency in order to “cohere” the characteristic broadband emissions from the receiver.

2.2 Test Result

The emissions meeting the requirement of section 15.109 are based on measurements employing the CISPR quasipeak detector.

It was found that the EUT meet the FCC requirement.

3 Description of the Line-conducted Test

3.1 Test Procedure

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2003. The EUT was setup as described in the procedures, and both lines were measured.

3.2 Test Result

No measurement is required as the EUT is a battery-operated product.
