

# Test Report

Report No.: E20240509968801-01-1

Customer: Comba Telecom Network Systems Limited

Address: Flat/Rm 10, 3/F, Bio-Informatics Ctr, 2 Science Park West Avenue, HK Science Park, Pak Shek Kok, N.T. Hong Kong

Sample Name: Public Safety DAS

Sample Model: RH78V3-B

Receive Sample Date: May 9, 2024

Test Date: May 14, 2024 ~ May 22, 2024

Reference Document: FCC PART 90-- PRIVATE LAND MOBILE RADIO SERVICES

Test Result: PASS

FCC ID: PX8RH78V3-B

Prepared by:

## Statement

1. The report is invalid without "special seal for inspection and testing"; some copies are invalid; The report is invalid if it is altered or missing; The report is invalid without the signature of the person who prepared, reviewed and approved it.
2. The sample information is provided by the client and responsible for its authenticity; The content of the report is only valid for the samples sent this time.
3. When there are reports in both Chinese and English, the Chinese version will prevail when the language problems are inconsistent.
4. If there is any objection concerning the report, please inform us within 15 days from the date of receiving the report.
5. Without the agreement of the laboratory, the client is not authorized to use the test results for unapproved propaganda.
6. The test report without CMA approval mark is only used for scientific research, teaching, internal quality control and other purposes.

————— The following blanks ———

## 1. Applicant information

### 1.1. Client information

Name: Comba Telecom Network Systems Limited  
Address: Flat/Rm 10, 3/F, Bio-Informatics Ctr, 2 Science Park West Avenue, HK Science Park, Pak Shek Kok, N.T. Hong Kong

### 1.2. Manufacturer and Factory

Manufacture Name: Comba Network Systems Company Limited  
Address: No. 10 Shenzhou Road, Guangzhou Science City, Guangzhou 510663, Guangdong, P.R.China  
Factory: Comba Telecom Technology (Guangzhou) Ltd.  
Address: No. 6 Jinbi Road, Economics and Technology Development District, Guangzhou, Guangdong, China

## 2. General description of EUT

### 2.1. Basic description of EUT

Product Name: Public Safety DAS  
Product Model: RH78V3-B  
Trade Name: Comba  
Power Supply: Typical working voltage: AC 110V, 50/60Hz  
Power cord: AC power cord  
Frequency Band: 700MHz Band:  
Downlink: 769MHz ~ 775MHz, Uplink: 799MHz ~ 805MHz  
800MHz Band:  
Downlink: 851MHz ~ 862MHz, Uplink: 806MHz ~ 817MHz  
Nominal Output Power: Downlink:  $33 \pm 1$  dBm (Center Frequency)  
Uplink:  $27 \pm 1$  dBm (Center Frequency)  
Nominal System Gain: Downlink:  $90 \pm 2$  dB (Center Frequency)  
Uplink:  $90 \pm 2$  dB (Center Frequency)  
EUT Operating Temperature: -40°C to +55°C  
Operating Humidity: 5% to 95%  
Antenna Type: N/A<sup>①</sup>

NOTE 1: This EUT is a Broadband device, which belongs to Class B signal booster.

NOTE 2: <sup>①</sup> The EUT does not provide antenna by manufacturer's statement, but it is required that the sum of antenna gain and cable loss shall not exceed 3dBi for downlink and 9 dBi for uplink when the project is used by manufacturer's statement.

NOTE 3: The original FCC ID number of this product is PX8RH78V3-B, and the original report number is E20230509197301-1.

NOTE 4: According to the customer's requirements, the purpose of this test is to add 1MHz to the original operating frequency range according to FCC rules, which means that the original 800MHz operating

frequency range (Downlink: 851MHz~861MHz, Uplink: 806MHz~816MHz) has been changed to (Downlink: 851MHz~862MHz), Uplink: 806MHz ~ 817MHz);

NOTE 5: According to the customer's request, it is requested to supplement the content of the original report (report number: E20230509197301-1) in this report. Therefore, for convenience, the test data from the original report will be added to Appendix A of this report.

————— The following blanks ————

## 2.2. Signal Booster control process

### 2.2.1. System block

Figure 2-1 System block diagram

### 2.2.2. Signal control process

In the downlink path, the BTS signals are received by the donor antenna that is connected to the Master Unit. After the duplexer, the signals are sent to the LNA module for pre-amplification and to the digital RF integrated module for digital filtering and frequency conversion. Then the DL signals will be filtered via the duplexer, and then sent to the Expansion Unit(s), the RF signal is converted into an optical signal and then distributed to the Remote Unit(s) to over optical fiber. After amplification by the RU, the signals are transmitted at the MT port to the service.

In the uplink path, the mobile signals are received by the service antenna. After passing through the MT port duplexer, the signals are sent to the LNA and the integrated module for digital filtering, then the UL signals will be sent to the Expansion Unit(s), the RF signal is converted into an optical signal and then distributed to the Master Unit for filtering by the duplexer and power amplification. Finally, the uplink signals are sent to the donor antenna for transmission back to the BTS.

Both DL PA and UL PA have ALC function (ALC= Auto Level Control) to control the output power under the rated output power.

Downlink detection circuit detect the downlink output power at PA output port of Remote unit(RU) and send to differential comparator to compare with the rated output power  $32 \pm 1 \text{ dBm}$ , and the output of differential comparator will send control level to attenuator at PA input port to make sure the output power at PA output port is not higher than  $33 \text{ dBm}$  (TX/RX Separate).

Uplink detection circuit detect the uplink output power at PA output port of Master unit(MU) and send to differential comparator to compare with the rated output power  $27 \pm 1 \text{ dBm}$ , and the output of differential comparator will send control level to attenuator at PA input port to make sure the output power at PA output port is not higher than  $28 \text{ dBm}$  (TX/RX Separate).

————— The following blanks ————

### 3. Test signal modulation description

Refer to FCC PART 2.202 (g), Table of necessary bandwidths follow:

#### 3.1. Analog signals

Emission Designator	Description	Modulation type	M (modulation Freq, kHz)	R (Rate, baud sym/s)	D (Deviation, kHz)	K (numeric constant)	S (Symbols)	Bandwidth Calculation	Necessary Bandwidth (kHz)
11K0F3E	Narrowband Analog FM Voice	FM	3.0	--	2.5	1.0	--	Bn=2M+2DK	11.0
16K0F3E	Wideband Analog FM Voice	FM	3.0	--	5.0	1.0	--	Bn=2M+2DK	16.0

#### 3.2. Digital signals

Emission Designator	Description	Modulation type	M (modulation Freq, kHz)	R (Rate, baud sym/s)	D (Deviation, kHz)	K (numeric constant)	S (Symbols)	Bandwidth Calculation	Necessary Bandwidth
8K10F1E	P25 Phase I C4FM Voice	4FSK	--	9600	1.8	0.916	4	Bn=(R/log <sub>2</sub> S)+2DK	8.1
8K10F1D	P25 Phase I C4FM Data	4FSK	--	9600	1.8	0.916	4	Bn=(R/log <sub>2</sub> S)+2DK	8.1
8K10F1W	P25 Phase II H-CPM Voice/Data	4FSK	--	9600	1.8	0.916	4	Bn=(R/log <sub>2</sub> S)+2DK	8.1
9K80F1E	P25 Phase II H-DQPSK Voice	QPSK	--	12000	--	0.817	4	Bn=2RK/log <sub>2</sub> S	9.8
9K80F1D	P25 Phase II H-DQPSK Data	QPSK	--	12000	--	0.817	4	Bn=2RK/log <sub>2</sub> S	9.8
7K60FXE	DMR Voice	4FSK	--	9600	1.8	0.778	4	Bn=(R/log <sub>2</sub> S)+2DK	7.6
7K60FXD	DMR Data	4FSK	--	9600	1.8	0.778	4	Bn=(R/log <sub>2</sub> S)+2DK	7.6
21K0F1E	Tetra Voice	$\pi/4$ DQPSK	--	9600	--	2.188	4	Bn=2RK/log <sub>2</sub> S	21.0
21K0F1D	Tetra Data	$\pi/4$ DQPSK	--	9600	--	2.188	4	Bn=2RK/log <sub>2</sub> S	21.0

————— The following blanks —————

NOTE: In the above test signal modes, the typical signal and the worst mode signal are used as representatives in this test. The specific test signal types are as follows:

Emission Designator	Description	Modulation type	M (modulation Freq, kHz)	R (Rate, baud sym/s)	D (Deviation, kHz)	K (numeric constant)	S (Symbols)	Bandwidth Calculation	Necessary Bandwidth
16K0F3E	Wideband Analog FM Voice	FM	3.0	--	5.0	1.0	--	Bn=2M+2DK	16.0
8K10F1D	P25 Phase I C4FM Data	4FSK	--	9600	1.8	0.916	4	Bn=(R/log <sub>2</sub> S)+2DK	8.1
9K80F1D	P25 Phase II H-DQPSK Data	QPSK	--	12000	--	0.817	4	Bn=2RK/log <sub>2</sub> S	9.8
7K60FXD	DMR Data	4FSK	--	9600	1.8	0.778	4	Bn=(R/log <sub>2</sub> S)+2DK	7.6
21K0F1D	Tetra Data	$\pi/4$ DQPSK	--	9600	--	2.188	4	Bn=2RK/log <sub>2</sub> S	21.0

NOTE: ☒ mean that test needs to be performed.

————— The following blanks ————

## 6. About Signal Booster

According to the basic information of EUT and FCC part 90.219 (a) and KDB 935210 D02 APPENDIXA3.1 rules, this EUT belongs to PART 90 class B Industrial signal booster and it is a non SMR.

### 6.1. KDB 935210 D02 APPENDIXA3.1

#### A.3.1 Signal Booster (Section 90.219)

A **Signal Booster (Section 90.219)** is a device or system that automatically receives, amplifies, and retransmits signals from wireless stations into and out of building interiors, tunnels, shielded outdoor areas and other locations where these signals would otherwise be too weak for reliable communications. Signal booster systems may contain both Class A and Class B signal boosters as components. [Section 90.219(a)]

All **Section 90.219 boosters** are a type of Industrial Signal Booster, and are classified as either **Class A boosters** (narrowband) or **Class B boosters** (wideband). [R11] [Order, ¶ 15]

Note also that Consumer Signal Boosters are not defined for PLMRS or PSRS because licensees are considered to operate private services. Part 90 PLMR licensees typically obtain authorizations for individual narrowband channels or groups of channels to satisfy their own communication needs. Moreover, many Part 90 channels are interleaved and a licensee's channels may not be adjacent to one another, which presents unique considerations for signal boosters used with Part 90 PLMR services. [Order, ¶ 144]

**a) Class A signal booster:** A signal booster designed to retransmit signals on one or more specific channels. A signal booster is deemed to be a Class A signal booster if none of its passbands exceed 75 kHz. [Section 90.219(a)]

**b) Class B signal booster:** A signal booster designed to retransmit any signals within a wide frequency band. A signal booster is deemed to be a Class B signal booster if it has a passband that exceeds 75 kHz. [Section 90.219(a)]

Class B signal boosters may be deployed only at fixed locations; mobile operation of Class B signal boosters is prohibited (after November 1, 2014). [Section 90.219(d)(4)]

Except for signal boosters incorporating distributed antenna systems (DAS) and installed in buildings, the passband of a Class B booster shall not encompass both commercial services (such as ESMR and Cellular Radiotelephone) and Part 90 Land Mobile and Public Safety Services. [Section 90.219(d)(7)]

### 6.2. FCC part 90.219 (a) Definitions

#### §90.219 Use of signal boosters.

This section contains technical and operational rules allowing the use of signal boosters in the Private Land Mobile Radio Services (PLMRS). Rules for signal booster operation in the Commercial Mobile Radio Services under part 90 are found in §20.21 of this chapter.

<https://www.ecfr.gov/cgi-bin/text-idx?SID=2097cbcede8abb94d012e95530a44e05&mc=true&node=pt47.5.90&rgn=div5>

---

2020/6/15

Electronic Code of Federal Regulations (eCFR)

(a) **Definitions.** The definitions in this paragraph apply only to the rules in this section.

**Class A signal booster.** A signal booster designed to retransmit signals on one or more specific channels. A signal booster is deemed to be a Class A signal booster if none of its passbands exceed 75 kHz.

**Class B signal booster.** A signal booster designed to retransmit any signals within a wide frequency band. A signal booster is deemed to be a Class B signal booster if it has a passband that exceeds 75 kHz.

## 7. Test modes

Test modes	<p>Downlink mode: After the Main Unit (MU), Expansion Unit (EU) and Remote Unit (RU) are connected, the "DT" port of the MU is connected to the signal generator, and the "MT" port of the RU is connected to the spectrum analyzer through the attenuator to turn on the MU and RU power supplies and transmit signals.</p> <p>Uplink mode: After the Main Unit (MU), Expansion Unit (EU) and Remote Unit (RU) are connected, the "MT" port of the RU is connected to the signal generator, and the "DT" port of the MU is connected to the spectrum analyzer through the attenuator to turn on the MU and RU power supplies and transmit signals.</p>

## 8. Laboratory

### 8.1. Laboratory

The tests & measurements refer to this report were performed by GRG METROLOGY & TEST GROUP CO., LTD.

Testing Certificate Number: 2861.02

Add. : Park, No.9, Wu Ke East 3<sup>rd</sup> Road, WuHou District, ChengDu, 610045, People's Republic of China

P.C. : 610045

Tel : (+86) 028-86496437

Fax : (+86) 028-86496423

### 8.2. Accreditations

Our laboratories are accredited and approved by the following approval agencies according to ISO/IEC 17025.

**USA:** A2LA(Certificate #2861.02)

————— The following blanks ————

## 9. Measurements uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

Measurement		Frequency	Uncertainty
Radiated spurious emissions	Horizontal	30MHz~1000MHz	4.8dB
	Horizontal	1GHz~18GHz	5.1dB
	Vertical	30MHz~1000MHz	4.9dB
	Vertical	1GHz~18GHz	5.0dB

Measurement	Uncertainty
RF frequency	$6.0 \times 10^{-6}$
RF power conducted	0.60dB
Occupied channel bandwidth	0.40%
Unwanted emission, conducted	0.66dB
Humidity	6.0%
Temperature	2.0°C

Note: This uncertainty represents an expanded uncertainty factor of  $k=2$ .

## 11. Radio technical requirement specification

### 11.1. Test Frequencies

Test requirement: KDB 935210 D02 APPENDIX D/Table D.3  
 FCC PART 2.1057  
 ANSI C63.26-2015 Clause 5.1.2

#### 11.1.1. Requirements

Reference to FCC regulations, FCC part 2.1057, ANSI C63.26-2015 clause 5.1.2 and KDB 935210 D02 Appendix D / table D.3 have relevant frequency band requirements.

##### (1) FCC PART 2.1057

###### **§2.1057 Frequency spectrum to be investigated.**

(a) In all of the measurements set forth in §§2.1051 and 2.1053, the spectrum shall be investigated from the lowest radio frequency signal generated in the equipment, without going below 9 kHz, up to at least the frequency shown below:

(1) If the equipment operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

(2) If the equipment operates at or above 10 GHz and below 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 100 GHz, whichever is lower.

(3) If the equipment operates at or above 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 200 GHz, whichever is lower.

(b) Particular attention should be paid to harmonics and subharmonics of the carrier frequency as well as to those frequencies removed from the carrier by multiples of the oscillator frequency. Radiation at the frequencies of multiplier stages should also be checked.

(c) The amplitude of spurious emissions which are attenuated more than 20 dB below the permissible value need not be reported.

(d) Unless otherwise specified, measurements above 40 GHz shall be performed using a minimum resolution bandwidth of 1 MHz.

##### (2) ANSI C63.26-2015 Clause 5.1.2

###### **5.1.2 Number of fundamental frequencies to be tested in EUT transmit band**

###### **5.1.2.1 General requirement**

Measurements of transmitters shall be performed and, if required, reported for each frequency band in which the EUT can be operated with the device transmitting at the number of frequencies in each band specified in Table 2.

<sup>24</sup> See 47 CFR 2.1057.

**Table 2—Number of frequencies to be tested**

Frequency range over which EUT operates	Number of frequencies	Location in frequency range of operation
1 MHz or less	1	Middle
1 MHz to 10 MHz	2	1 near top and 1 near bottom
More than 10 MHz	3	1 near top, 1 near middle, and 1 near bottom

## (3) KDB 935210 D02 APPENDIX D/Table D.3

**Section 90.219 purposes (for info only – see rules for details, also KDB Publication 634817 [R14])**

The EUT will utilize bands:

700MHz Band:

Downlink: 769MHz ~ 775MHz, Uplink: 799MHz ~ 805MHz

800MHz Band:

Downlink: 851MHz ~ 862MHz, Uplink: 806MHz ~ 817MHz

#### 11.1.2. Result

This project is only reported and checked, the frequency range of this EUT meets the above regulatory requirements.

## 11.2. Input Signals

Test requirement: KDB 935210 D05 clause 4.1

### 11.2.1. Requirements

(1) KDB 935210 D05 clause 4.1

The procedures in this clause are specific to EUTs intended for operating in the Private Land Mobile Radio Services (PLMRS) and Public Safety Radio Services (PSRS)<sup>5</sup>, which are governed under the provisions and requirements of the Part 90 rules (i.e., Section 90.219 applies).

Table 1 depicts signal types associated with PLMRS operations, which are to be considered as test signals to be used in performing compliance testing on PLMRS amplifiers, repeaters, and industrial boosters. Not all of the procedures in this clause will require using each of the signals listed in Table 1, because for

---

<sup>5</sup> As explained in § 90.16, Public Safety Radio Services is part of the Public Safety Radio Pool, also known as the Public Safety Pool.

many EUTs a CW tone can adequately model the narrowband signals typically encountered within these services. For EUTs supporting digitally modulated signals, the intended operating signal types should be tested (e.g., P25 Phase 1, P25 Phase 2, TETRA, etc.), especially for PSRS devices. Devices intended for use in 700 MHz Public Safety Broadband spectrum shall be tested using a representative band-limited AWGN signal (99 % OBW of 4.1 MHz) or the applicable signal type (e.g., LTE).

**Table 1—Test signals for PLMRS devices**

Emission Designator	Modulation	Occupied Bandwidth	Channel Bandwidth	Audio Frequency
16K0F3E	FM	16 kHz	25 kHz	1 kHz
11K3F3E	FM	11.3 kHz	12.5 kHz	1 kHz
4K00F1E	FM	4 kHz	6.25 kHz	1 kHz
N/A	CW	N/A	N/A	N/A

### 11.2.2. Result:

Test Date (yy-mm-dd): 2024-05-14

Normal condition: Temp:25.3 °C, Humid: 42%, Atmospheric Pressure:101kpa

Supply Voltage: AC 110V, 50Hz

This project is only reported and checked.
