TEST REPORT

| Application No.: | GZEM1205001511RF |
|------------------|---|
| Applicant: | Comba Telecom Ltd. |
| FCC ID: | PX8RX-8139 |
| Product Name: | 850MHz CDMA and UMTS Dual Mode Wireless Band Selective Repeater |
| Model No.: | RX-8139 |
| Trade Mark: | Comba |
| Standards: | FCC Part 22, FCC Part 2 |
| Date of Receipt: | 2012-05-08 |
| Date of Test: | 2012-05-08 to 2012-05-16 |
| Date of Issue: | 2012-06-14 |
| Test Result : | Pass* |

* In the configuration tested, the EUT detailed in this report complied with the standards specified above. Please refer to section 3 of this report for further details.

Manager

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

5 General Information

5.1 Client Information

| Applicant Name: | Comba Telecom Ltd. |
|--------------------------|--|
| Applicant Address: | 611 East Wing, No. 8 Science Park West Avenue, Hong Kong Science Park, Tai Po, Hong Kong |
| Manufacturer: | Comba Telecom Systems(Guangzhou)Ltd. |
| Address of Manufacturer: | No.10 Shenzhou Road, Guangzhou Science City,Guangzhou 510663,Guangdong,P.R.China |

5.2 General Description of E.U.T.

| Product Name: | 850MHz CDMA and UMTS Dual Mode Wireless Band Selective Repeater |
|------------------------|---|
| Model No.: | RX-8139 |
| Power Supply: | AC 100-240V 47 to 63Hz |
| Test power: | AC 230V |
| Operating Temperature: | -10 °C to +55°C |
| Operating Humidity: | ≤ 95% |

5.3 Details of E.U.T.

| Type of Modulation | CDMA & WCDMA |
|-----------------------|--------------------------------|
| Emission Designator: | F9W(CDMA), |
| Emission Designator: | F9W (WCDMA) |
| Froquency Band: | Downlink: 870MHz to 882.5MHz |
| Frequency Band: | Uplink: 825MHz to 837.5MHz |
| Opereating Band: | CDMA Band: |
| | Downlink: 870MHz to 877.5MHz |
| | Uplink: 825MHz to 832.5MHz |
| | WCDMA Band: |
| | Downlink: 877.5MHz to 882.5MHz |
| | Uplink: 832.5MHz to 837.5MHz |
| Nominal Power Output: | 10Wfor downlink |
| Nominal System Gain: | 90dB for downlink |

Report No.: GZEM120500151101 Page: 6 of 60 FCC ID: PX8RX-8139

5.4 Product Description

RX-8139 850MHz CDMA and UMTS Dual Mode Wireless Band Selective Repeater (hereinafter called "RX-8139") is designed for 850MHz network. Working frequency and working system can be customized for flexible configuration..

5.5 Standards Applicable for Testing

The standard used was FCC part 2 & FCC part 22

5.6 Test Location

All tests were performed at: SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory, 198 Kezhu Road, Scientech Park, Guangzhou Economic & Technology Development District, Guangzhou, China 510663 Tel: +86 20 82155555 Fax: +86 20 82075059 No tests were sub-contracted.

5.7 Other Information Requested by the Customer

None.

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <u>www.sgs.com/terms_and_conditions.htm</u> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <u>www.sgs.com/terms_edocument.htm</u>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document for 90 days only.

Report No.: GZEM120500151101 Page: 7 of 60 FCC ID: PX8RX-8139

5.8 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• NVLAP (Lab Code: 200611-0)

SGS-CSTC Standards Technical Services Co., Ltd., Guangzhou EMC Laboratory is recognized under the National Voluntary Laboratory Accreditation Program (NVLAP/NIST). NVLAP Code: 200611-0.

• ACMA

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory can also perform testing for the Australian C-Tick mark as a result of our NVLAP accreditation.

• SGS UK(Certificate No.: 32), SGS-TUV SAARLAND and SGS-FIMKO

Have approved SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory as a supplier of EMC TESTING SERVICES and SAFETY TESTING SERVICES.

• CNAS (Lab Code: L0167)

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory has been assessed and in compliance with CNAS-CL01:2006 accreditation criteria for testing laboratories (identical to ISO/IEC 17025:2005 General Requirements) for the Competence of Testing Laboratories.

• FCC (Registration No.: 282399)

SGS-CSTC Standards Technical Services Co., Ltd., EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration 282399, May 31, 2002.

• Industry Canada (Registration No.: 4620B-1)

The 3m/10m Alternate Semi-anechoic chamber of SGS-CSTC Standards Technical Services Co., Ltd. has been registered by Certification and Engineering of Industry Canada for radio equipment testing with Registration No. 4620B-1.

• VCCI (Registration No.: R-2460, C-2584, G-449 and T-1179)

The 10m Semi-anechoic chamber and Shielded Room of SGS-CSTC Standards Technical Services Co., Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: R-2460, C-2584, G-449 and T-1179 respectively.

• CBTL (Lab Code: TL129)

SGS-CSTC Standards Technical Services Co., Ltd., E&E Laboratory has been assessed and fully comply with the requirements of ISO/IEC 17025:2005, the Basic Rules, IECEE 01:2006-10 and Rules of procedure IECEE 02:2006-10, and the relevant IECEE CB-Scheme Operational documents.

7 Test Results

7.1 E.U.T. test conditions

| Input voltage: | AC 230V |
|------------------------|---|
| Operating Environment: | |
| Temperature: | 22°C ~26°C |
| Humidity: | 46%~56% RH |
| Atmospheric Pressure: | 990~1005mbar |
| Test Requirement: | The RF output power of the EUT was measured at the antenna port, by adjusting the input power of signal generter to drive the EUT to get to maximum output power point and keep the EUT at maximum gain setteing for all tests. The device should be tested on downlink. |
| | For detail test Modulation and Frequency, please refer to 7.2. |

Remark:

GENERAL DEFINITIONS FOR CERTIFICATION PURPOSES:

The following three general definitions follow from those stated in the Part 22, 24, and 90 rule sections as listed above. Two of the definitions replace previous EAB internal definitions given for booster, repeater and extender. The general term "extender" is the same as booster, but booster should be used rather than extender. The general term "translator" is the same as repeater, but repeater should be used rather than translator.

External radio frequency power amplifier (ERFPA) - any device which, (1) when used in conjunction with a radio transmitter signal source, is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured. The EAS equipment class AMP is used only for an ERFPA device inserted between a transmitter (TNB/PCB) and an antenna (has only one antenna port)

Booster is a device that automatically reradiates signals from base transmitters without channel translation, for the purpose of improving the reliability of existing service by increasing the signal strength in dead spots. An "in-building radiation system" is a signal booster. These devices are not intended to extend the size of coverage from the originating base station. A booster can be either single or multiple channels.

Repeater is a device that retransmits the signals of other stations. Repeaters are different from boosters in that they can include frequency translation and can extend coverage beyond the design of the original base station. A repeater is typically single channel but can also be multiple channels.

ERFPA (AMP) and boosters/repeaters (TNB/PCB) can generally be authorized for all rule parts except 15 and 18.

Tests should be done with each typical signal. e.g., for F3E emissions use 2500 Hz with 2.5 or 5 kHz deviation. Use of CW signal for some tests is acceptable in lieu of actual emission, in some cases when CW signal gives worst case.

The EUT is a Repeater and belongs to TNB class.

Report No.: GZEM120500151101 Page: 11 of 60 FCC ID: PX8RX-8139

7.2 Test Procedure & Measurement Data

Test Modulation and Frequency CDMA Band

| Modulation | Lowest frequency | Middle frequency | Highest frequency | | |
|--------------------------------|------------------|------------------|-------------------|--|--|
| 1)Downlink: 870MHz to 877.5MHz | | | | | |
| CDMA | 871.5 | 873.75 | 876 | | |
| 2)Uplink: 825MHz to 832.5MHz | | | | | |
| CDMA | 826.5 | 828.75 | 831 | | |

WCDMA Band:

| Modulation | Lowest frequency | Middle frequency | Highest frequency |
|-------------------------|------------------|------------------|-------------------|
| 1)Downlink: 877.5MHz t | o 882.5MHz | | |
| WCDMA | N/A | 880 | N/A |
| 2)Uplink: 832.5MHz to 8 | 37.5MHz | 1 | 1 |
| WCDMA | N/A 835 N/A | | |
| Romark. | | | |

Remark:

 We test the downlink(Input From DT,Output From TX),Uplink(Input From RX,Output From DT) in the lowest band; the middle band; the hightest band for CDMA Band and the middle band for WCDMA.

7.2.1 RF Output Power

| Test Date: | 2012-05-11 |
|---------------------|--|
| Test Requirement: | FCC part 22.913(a) |
| | 22.913(a):Maximum ERP. In general, the effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts. |
| Test Method: | FCC part 2.1046 |
| EUT Operation: | |
| Status: | Drive the EUT to maximum output power. |
| Conditions: | Normal conditions |
| Application: | Cellular Band RF output ports |
| Test Configuration: | |
| Sign | |

Fig.1 RF Output Power test configuration

| Test Procedure: | RF output power test procedure: |
|-----------------|--|
| | 1. |
| | a) Connect the equipment as illustrated, when the output power is over the max value of the Spectrum Analyzer, add the attenuator to avoid destroying the facility. |
| | b) Set the center frequency of the spectrum analyzer to the assigned transmitter frequency, key the transmitter, and set the level of the carrier to the full scale reference line. |
| | c) do not apply any tone to modulate the EUT. |
| | d1) Adjust the spectrum analyzer for the following settings: |
| | 1) Resolution Bandwidth >> the carrier bandwidth, |
| | 2) Video Bandwidth refer to standard requirement. |
| | d2) Use spectrum analyzer channel power measurement function; |
| | e) Record the frequencies and levels of carrier power; |
| | f) Calculate the signal link way loss and final power value. |
| | Or 2. |
| | a) Connect the equipment as illustrated; |
| | b) Read the value from the power meter; |
| | c) Calculate the signal link way loss and final power value. |
| Remark: | Output power – |
| | Power on Form 731 should be clearly understood as either composite of multichannels or per carrier. If power is composite include in comments field: "Power output listed is composite for multi-channel operation." |
| | . Check that the input drive level is at maximum input rating and maximum gain |
| | settings for all tests. Check both uplink and downlink input levels. See manual or |
| | brochures/technical description for maximum rating. May need to check FCC |
| | identifier of transmitter used for tests. |
| | Confirm device can not operate in saturation. Are there means to control maximum power and to assure linear operation (use in system configuration may be necessary)? How is saturation or over-modulation prevented for pulsed signal inputs? |

Report No.: GZEM120500151101 Page: 15 of 60 FCC ID: PX8RX-8139

| 1)Downlink: Working Band(877.5MHz ~ 882.5MHz),Measure Maximum Output power | | | | | | | | |
| WCDMA | WCDMA N/A 40.07 dBm(10.16 | | N/A | | | | | |
| 2)Uplink: Working Band(832.5MHz ~ 837.5MHz),Measure Maximum Output power | | | | | | | | |
| WCDMA | N/A 24.66 dBm(0.29W) | | N/A 24.66 dBm(0.29W) | | N/A | | | |

Remark: test in single channel status, output power is tested in full amplifying status.

Kept the EUT working in maximum gain, adjusted the input power until to get the EUT to maximum output power.

Note: Conducted output power tested. EIRP was not tested because the amplifier does not come with an antenna.

Report No.: GZEM120500151101 Page: 16 of 60 FCC ID: PX8RX-8139

7.2.2 Conducted Spurious Emissions

| Test Date: | 2012-05-11 |
|---------------------|--|
| Test Requirement: | FCC part 22.917(a) |
| | 22.917(a) Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P) dB$. |
| Test Method: | FCC part 2.1051 |
| EUT Operation: | |
| Status: | Drive the EUT to maximum output power. |
| Conditions: | Normal conditions |
| Application: | Cellular Band RF output ports |
| Test Configuration: | |
| | |

Report No.: GZEM120500151101 Page: 17 of 60 FCC ID: PX8RX-8139

Test Procedure: Conducted Emissions test procedure:

a) Connect the equipment as illustrated, with the notch filter by-passed, when the output power is over the max value of the Spectrum Analyzer, add the attenuator to avoid destroying the facility.

b) Set the center frequency of the spectrum analyzer to the assigned transmitter frequency, key the transmitter, and set the level of the carrier to the full scale reference line.

c) do not apply any tone to modulate the EUT.

d) Adjust the spectrum analyzer for the following settings:

1) Resolution Bandwidth, (base the standard, apply the different set), her is 100KHz for frequency band less than 1GHz, 1MHz for frequency over 1GHz;

2) Video Bandwidth refer to standard requirement.

e) Adjust the center frequency of the spectrum analyzer for incremental coverage of the range from:

1) the lowest radio frequency generated in the equipment, it can be 9KHz base the test method, here select 30MHz as lowest frequency start point;

2) the highest radion frequency shall higher than 10 times of carrier frequency;

f) Record the frequencies and levels of spurious emissions from step e) Remark:

The notch filter is used for avoid the EUT fundamental carrier output power making the spectrum overload and the harmonic spurious brought by it.

When the EUT fundamental carrier is not enough to make the status, the notch filter could be not used.

7.2.3 Band Edge& Intermodulation

| Test Date: | 2012-05-16 |
|---|---|
| Test Requirement: | FCC part 22.917(b) 22.917(b) Measurement procedure. Compliance with these rules is based on the use of measurement instrumentation employing a resolution bandwidth of 100 kHz or greater. In the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed. A narrower resolution bandwidth is permitted in all cases to improve measurement accuracy provided the measured power is integrated over the full required measurement bandwidth (i.e. 100 kHz or 1 percent of emission bandwidth, as specified). The emission bandwidth is defined as the width of the signal between two points, one below the carrier center frequency and one |
| | above the carrier center frequency, outside of which all emissions are attenuated at least 26 dB below the transmitter power. |
| Test Method: | FCC part 2.1051&2-11-04/EAB/RF |
| EUT Operation: | |
| Status: Conditions: Application: Test Configuration: | Drive the EUT to maximum output power. Normal conditions Cellular Band RF output ports |

Fig.3. Band edge and Intermodulation test configuration

Report No.: GZEM120500151101 Page: 32 of 60 FCC ID: PX8RX-8139

Test Procedure:

Conducted Emissions test procedure:

a) Connect the equipment as illustrated, with the notch filter by-passed, when the output power is over the max value of the Spectrum Analyzer, add the attenuator to avoid destroying the facility.

b) Set the center frequency of the spectrum analyzer to the assigned transmitter frequency, key the transmitter, and set the level of the carrier to the full scale reference line.

- c) do not apply any tone to modulate the EUT.
- d) Adjust the spectrum analyzer for the following settings:
 - 1) Resolution Bandwidth,(base the standard, apply the different set),here is 100KHz for frequency band less than 1GHz, 1MHz for frequency over 1GHz;
 - 2) Video Bandwidth refer to standard requirement.

e) Adjust the center frequency of the spectrum analyzer for incremental coverage of the range from:

1) the lowest radio frequency generated in the equipment, it can be 9KHz base the test method, here select 30MHz as lowest frequency start point;

2) the highest radion frequency shall higher than 10 times of carrier frequency;

f) Record the frequencies and levels of spurious emissions from step e) Remark:

The notch filter is used for avoid the EUT fundamental carrier output power

making the spectrum overload and the harmonic spurious brought by it.

When the EUT fundamental carrier is not enough to make the status, the notch filter could be not used.

Report No.: GZEM120500151101 Page: 33 of 60 FCC ID: PX8RX-8139

| ntermodulation | 1. Connect the equipment as illustrated; |
|-----------------|--|
| Test Procedure: | 2. Test the background noise level with all the test facilities; |
| | Keep one transmitting path, all other connectors shall be connected by normal power or RF leads; |
| | Select the attenuator to avoid the test receiver or spectrum analyzer being destroied; |
| | 5. Keep the EUT continuously transmitting in max power; |
| | 6. Keep two signals are same in modulation type and level; |
| | 7. Measure the 3 order intermodulated product by the EUT(the sum of the two unwanted signal should be rated power); |
| | 8. Correct for all losses in the RF path; |
| | 9. Read the conducted spurious emissioins of the EUT antenna port. |
| | Remark: |
| | At maximum drive level, for each modulation: one test with three tones, or two tests (high-, low-band edge) with two tones |
| | Limit usually is -13dBm conducted. |
| | Not needed for Single Channel systems. |

Report No.: GZEM120500151101 Page: 34 of 60 FCC ID: PX8RX-8139

7.2.3.1 Measurement Record:

1.Test for CDMA:

2.Test for WCDMA:

2.1 one signal input downlink(877.5MHz ~ 882.5MHz)- Lower Edge

2.2 one signal input downlink(877.5MHz ~ 882.5MHz)- Upper Edge

Report No.: GZEM120500151101 Page: 39 of 60 FCC ID: PX8RX-8139

2.3 one signal input Uplink(832.5MHz ~ 837.5MHz)- Lower Edge

2.4 one signal input Uplink (832.5MHz ~ 837.5MHz)- Upper Edge

Report No.: GZEM120500151101 Page: 40 of 60 FCC ID: PX8RX-8139

Remark:

For the test in two signal input or intermodulation, test input signal f1 and f2 will consider as follows conditions:

- 1) EUT frequency band span and the amount of channels;
- 2) f1 is the frequency lower, f2 is the frequency higher, $\triangle f$ is the channel spacing;
- in lower edge test, f1 is the lower edge frequency +1 channel frequency, and f2 is +2 channel frequency;
- in higher edge test, f1 is the higher edge frequency -2 channel frequency, and f2 is -1 channel frequency;
- 5) according to the amplifier characteristic, the 3rd product will appear when two signals input;
- 6) base the 3rd product frequency F1= 2f1-f2 and F2=2f2-f1, when the f1 and f2 frequency select above,
 - a) in lower edge test, F1=2f1-(f1+ \triangle f)=f1- \triangle f=lower edge frequency;
 - b) in higher edge test, F2=2f2-(f2- $\triangle f$)=f2+ $\triangle f$ =higher edge frequency.

Report No.: GZEM120500151101 Page: 41 of 60 FCC ID: PX8RX-8139

| Test Date: | 2012-05-09 |
|---------------------|--|
| Test Requirement: | FCC part 22.917(a) |
| | 22.917(a) Out of band emissions. The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P) dB$. |
| Test Method: | FCC part 2.1053 |
| | ANSI/TIA-603-C-2004 |
| EUT Operation: | |
| Status: | Drive the EUT to maximum output power. |
| Conditions: | Normal conditions |
| Application: | Enclosure |
| Test Configuration: | |

30MHz to 1GHz emissions:

This document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at www.sgs.com/terms_and_conditions.htm and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at www.sgs.com/terms_e-document.htm. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's soft ereponsibility is to its Client is document does not exercise the company's fundings at the time of their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document for 90 days only.

Report No.: GZEM120500151101 Page: 42 of 60 FCC ID: PX8RX-8139

1GHz to 40GHz emissions:

Test Procedure:

1. Test the background noise level with all the test facilities;

2. Keep one transmitting path, all other connectors shall be connected by normal power or RF leads;

3. Select the suitable RF notch filter to avoid the test receiver or spectrum analyzer produce unwanted spurious emissions;

4. Keep the EUT continuously transmitting in max power;

5. Read the radiated emissioins of the EUT enclosure.

Radiated Emissions Test Procedure:

Report No.: GZEM120500151101 Page: 43 of 60 FCC ID: PX8RX-8139

- a) Connect the equipment as illustrated.
- b) Adjust the spectrum analyzer for the following settings:

1) Resolution Bandwidth = 100 kHz for spurious emissions below 1 GHz, and 1 MHz for spurious emissions above 1GHz.

2) Video Bandwidth = 300 kHz for spurious emissions below 1 GHz, and 3 MHz for spurious emissions above 1 GHz.

3) Sweep Speed slow enough to maintain measurement calibration.

4) Detector Mode = Positive Peak.

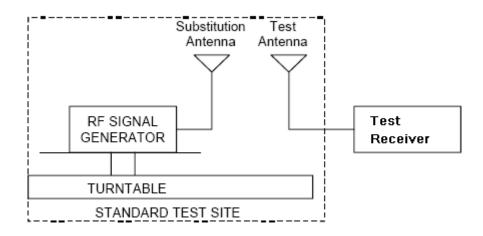

c) Place the transmitter to be tested on the turntable in the standard test site. The transmitter is transmitting into a nonradiating load that is placed on the turntable. The RF cable to this load should be of minimum length.

d) Measurements shall be made from 30 MHz to 10 tims of fundamental carrier, except for the region close to the carrier equal to \pm the carrier bandwidth.

e) Key the transmitter without modulation or normal modulation base the standard.

f) For each spurious frequency, raise and lower the test antenna from 1 m to 4 m to obtain a maximum reading on the spectrum analyzer with the test antenna at horizontal polarity. Then the turntable should be rotated 360° to determine the maximum reading. Repeat this procedure to obtain the highest possible reading. Record this maximum reading.

g) Repeat step f) for each spurious frequency with the test antenna polarized vertically.

Report No.: GZEM120500151101 Page: 44 of 60 FCC ID: PX8RX-8139

h) Reconnect the equipment as illustrated.

i) Keep the spectrum analyzer adjusted as in step b).

j) Remove the transmitter and replace it with a substitution antenna (the antenna should be halfwavelength for each frequency involved). The center of the substitution antenna should be approximately at the same location as the center of the transmitter. At the lower frequencies, where

the substitution antenna is very long, this will be impossible to achieve when the antenna is polarized vertically. In such case the lower end of the antenna should be 0.3 m above the ground.

k) Feed the substitution antenna at the transmitter end with a signal generator connected to the antenna by means of a nonradiating cable. With the antennas at both ends horizontally polarized, and with the signal generator tuned to a particular spurious frequency, raise and lower the test antenna to

obtain a maximum reading at the spectrum analyzer. Adjust the level of the signal generator output until the previously recorded maximum reading for this set of conditions is obtained. This should be done carefully repeating the adjustment of the test antenna and generator output.

I) Repeat step k) with both antennas vertically polarized for each spurious frequency.

m) Calculate power in dBm into a reference ideal half-wave dipole antenna by reducing the readings obtained in steps k) and l) by the power loss in the cable between the generator and the antenna, and further corrected for the gain of the substitution antenna used relative to an ideal half-wave dipole

antenna by the following formula:

Pd(dBm) = Pg(dBm) - cable loss (dB) + antenna gain (dB)

where:

Pd is the dipole equivalent power and

Pg is the generator output power into the substitution antenna.

NOTE: It is permissible to use other antennas provided they can be referenced to a dipole. NOTE: Effective radiated power (e.r.p) refers to the radiation of a half wave tuned dipole instead of an isotropic antenna. There is a constant difference of 2.15 dB between e.i.r.p. and e.r.p. e.r.p (dBm) = e.i.r.p. (dBm) - 2.15

Report No.: GZEM120500151101 Page: 45 of 60 FCC ID: PX8RX-8139

7.2.4.1 Measurement Record:

No emissions were detected within 20dB below the limit for the Downlink direction.

Remark:

The cabinet radiation was measured with the equipment transmitting a CW signal into a non-radiating 50 Ohm load at maximum output power on a signal frequency .

Measured were performed in the lowest, middle and hightest frequency for : the Downlink.

The spectrum was searched from 30MHz to 10GHz (10th Harmonic) for downlink;

Report No.: GZEM120500151101 Page: 46 of 60 FCC ID: PX8RX-8139

7.2.5 Occupied Bandwidth

| Test Date: | 2012-05-08 to 2012-05-12 |
|-------------------|--|
| Test Requirement: | 2-11-04/EAB/RF |
| Test Method: | FCC part 2.1049, 2-11-04/EAB/RF |
| | The spectral shape of the output should look similar to input for all modulations. |
| EUT Operation: | |

Status: Conditions: Application:

Drive the EUT to maximum output power. . Normal conditions Cellular Band RF output ports

Test Configuration:

Fig.2. Conducted Spurious Emissions test configuration

Test Procedure:

- a) Set the spectrum analyzer RBW 300 Hz or >1%&<2% emission bandwidth of carrier.
- b) Capture the trace of input signal;
- c) Connect the equipment as illustrated;
- d) Capture the trace of output signal;

Report No.: GZEM120500151101 Page: 47 of 60 FCC ID: PX8RX-8139

7.2.5.1 Measurement Record:

1.Test for CDMA:

1.1 Downlink: 870MHz ~ 877.5MHz (lowest frequency) – Input

1.2 Downlink: 870MHz ~ 877.5MHz (lowest frequency)-- Output

Report No.: GZEM120500151101 Page: 48 of 60 FCC ID: PX8RX-8139

1.3 Downlink: 870MHz ~ 877.5MHz (middle frequency)-- Input

1.4 Downlink: 870MHz ~ 877.5MHz (middle frequency)-- Output

Report No.: GZEM120500151101 Page: 49 of 60 FCC ID: PX8RX-8139

1.5 Downlink: 870MHz ~ 877.5MHz (highest frequency)-Input

1.6 Downlink: 870MHz ~ 877.5MHz (highest frequency)--Output

Report No.: GZEM120500151101 Page: 50 of 60 FCC ID: PX8RX-8139

1.7 Uplink: 825MHz ~ 832.5MHz (lowest frequency) - Input

1.8 Uplink: 825MHz ~ 832.5MHz (lowest frequency)-- Output

Report No.: GZEM120500151101 Page: 51 of 60 FCC ID: PX8RX-8139

1.9 Uplink: 825MHz ~ 832.5MHz (middle frequency)-- Input

1.10 Uplink: 825MHz ~ 832.5MHz (middle frequency)-- Output

Report No.: GZEM120500151101 Page: 52 of 60 FCC ID: PX8RX-8139

1.11 Uplink: 825MHz ~ 832.5MHz (highest frequency)-Input

1.12 Uplink: 825MHz ~ 832.5MHz (highest frequency)--Output

Report No.: GZEM120500151101 Page: 53 of 60 FCC ID: PX8RX-8139

2.Test for WCDMA:

2.3 Downlink: 877.5MHz ~ 882.5MHz (middle frequency)-- Input

2.4 Downlink: 877.5MHz ~ 882.5MHz (middle frequency)-- Output

Report No.: GZEM120500151101 Page: 54 of 60 FCC ID: PX8RX-8139

2.5 Uplink: 832.5MHz ~ 837.5MHz (middle frequency)-- Input

2.6 Uplink: 832.5MHz ~ 837.5MHz (middle frequency)-- Output

Report No.: GZEM120500151101 Page: 55 of 60 FCC ID: PX8RX-8139

7.2.6 Out of Band Rejection

| Test Date: | 2012-05-10 |
|---------------------|--|
| Test Requirement: | 2-11-04/EAB/RF |
| | Test for rejection of out of band signals. Filter freq. response plots are acceptable. |
| Test Method: | 2-11-04/EAB/RF |
| EUT Operation: | |
| Status: | Drive the EUT to maximum output power. |
| Conditions: | Normal conditions |
| Application: | Cellular Band RF output ports |
| Test Configuration: | |
| Sig | nal RF RF Spectrum nerator Input Output Analyzer |

Fig.4. Out of Band rejection test configuration

Test Procedure:

1. Connect the equipment as illustrated;

2. Test the background noise level with all the test facilities;

3. Keep one transmitting path, all other connectors shall be connected by normal power or RF leads;

4. Select the attenuator to avoid the test receiver or spectrum analyzer being destroied;

5. Keep the EUT continuously transmitting in max power;

6. Signal generator sweep from the frequency more lower than the product frequency to the frequency more higher than it, find the product band filter characteristic;

· CW signal rather than typical signal is acceptable (for FM).

· Multiple band filter will need test each other.

Report No.: GZEM120500151101 Page: 56 of 60 FCC ID: PX8RX-8139

7.2.6.1 Measurement Record:

1.Test for Downlink:870MHz to 882.5MHz

Report No.: GZEM120500151101 Page: 57 of 60 FCC ID: PX8RX-8139

2.Test for Uplink:825MHz to 832.5MHz

Report No.: GZEM120500151101 Page: 58 of 60 FCC ID: PX8RX-8139

7.2.7 Frequency Stability

| | • |
|-------------------|--|
| Test Date: | 2012-05-12 |
| Test Requirement: | FCC part 22.355 |
| | The frequency stability shall be sufficient to ensure that the fundamental emissions stay within the authorized bands of operation. |
| Test Method: | FCC part 2.1055 |
| EUT Operation: | |
| Status: | Drive the EUT to maximum output power. |
| Conditions: | Temperature conditions, voltage conditions |
| Application: | Cellular Band RF output ports |
| Test Procedure: | 1. Temperature conditions: |
| | The RF output port of the EUT was connected to Frequency Meter; |
| | b) Set the working Frequency in the middle channel; |
| | c) record the 20 °C and norminal voltage frequency value as reference point; |
| | d) vary the temperature from -10 $^{\circ}$ C to 55 $^{\circ}$ C with step 10 $^{\circ}$ C |
| | e) when reach a temperature point, keep the temperature banlance at least 1 hour to make the product working in this status; |
| | f) read the frequency at the relative temperature. |
| | 2. Voltage conditions: |
| | a) record the 20 °C and norminal voltage frequency value as reference point; |
| | b) vary the voltage from -15% norminal voltage to +15% voltage; |
| | c) read the frequency at the relative voltage. |
| | |
| | |

Report No.: GZEM120500151101 Page: 59 of 60 FCC ID: PX8RX-8139

7.2.7.1 Measurement Record:

Frequency Stability vs temperature:

1.Test for Downlink: 870~877.5MHz (middle channel 873.75MHz)

| Temperature(℃) | Frequency(MHz) | Tolerance(ppm) |
|----------------|----------------|----------------|
| 55 | 873.7500341 | 0.014535 |
| 40 | 873.7500369 | 0.017739 |
| 30 | 873.7500349 | 0.015451 |
| 20 | 873.7500214 | Reference |
| 10 | 873.7500641 | 0.048869 |
| 0 | 873.7500348 | 0.015336 |
| -10 | 873.7500345 | 0.149928 |

2.Test for Uplink: 825~832.5MHz (middle channel 828.75MHz)

| Temperature(°C) | Frequency(MHz) | Tolerance(ppm) |
|-----------------|----------------|----------------|
| 55 | 828.7500389 | 0.009291 |
| 40 | 828.7500431 | 0.014359 |
| 30 | 828.7500369 | 0.006877 |
| 20 | 828.7500312 | Reference |
| 10 | 828.7500432 | 0.014479 |
| 0 | 828.7500396 | 0.010136 |
| -10 | 828.7500478 | 0.020030 |

3.Test for Downlink: 877.5~882.5MHz (middle channel 880MHz)

| Temperature(℃) | Frequency(MHz) | Tolerance(ppm) |
|----------------|----------------|----------------|
| 55 | 880.0000325 | 0.009318 |
| 40 | 880.0000412 | 0.019205 |
| 30 | 880.0000258 | 0.001705 |
