Subject: Re : TCB Review Comments for (B06-0412a- PY306100034,950406H04- Netgear 2.4G 11n)

Dear Steve,

Thank you for your comments on this application!

The following items are our replies for your comments:

- 1) We uploaded the revised file to ftp. Please help us check it.
- 2) Yes, it's include the correction factor.
- 3) Please see client's response below,

Dear Eden,

What is shown in the manual is not a Regional Domain selection manual. It is just an information table showing the status of the Card-Bus including the current region setting. User cannot change the region setting because it was automatically scanned and controlled by AP. Basically it was just an explanation to the user on what a "Regional Domain" is.

Best Regards,
Jason Lin

Thanks!

Best Regards,

**TCB Review Comments for (B06-0412a- PY306100034, 950406H04- Netgear
2.4G 11n)**

-EMC-

Question #1: Operational description does not have enough info, please supply a more detail version to cover all modulation schemes, data rate and transmission modes...etc.

Question #2: Please clarify if radiated field strength measurement traces shows on the Restricted Bandedge Plots include the correction factor?

Question #3: P38 of user's manual show Regional Domain selection manual and this is not allowed by FCC/IC. Please explain.

Best Regards
