Hardware Features

Top Panel with LED

The WNCE3001 has one LED, which indicates the power and wireless connection status.

Top Panel	LED	Activity
	Power	<ul style="list-style-type: none">• Solid green: Unit is powered on and operating normally.• Solid or blinking amber: Unit is busy.• Solid red: Power source does not provide enough power.• Off: Unit is not powered on.
	WLAN	<ul style="list-style-type: none">• Green: The connection to the router is excellent.• Amber: The connection to the router is good.• Red: The connection to the router is poor.• Off: No wireless connection.

Rear Panel

Figure 1. Rear panel

Power Connection Options

You can power on your Internet adapter using **either** of these methods:

- Connect the WNCE3001 to an electrical outlet with the included power adapter.

Figure 2. Power adapter

- Connect the WNCE3001 to any USB port with the included USB power cable:

Figure 3. USB power cable

Make sure that the device where you connect the USB power cable is powered on. Some USB ports on consumer electronic devices cannot provide the power that the Internet adapter requires. In such cases, the power LED turns solid red and the Internet adapter may reset itself or turn itself off. If this happens, try connecting the USB cable to a different device, or use the Internet adapter power adapter instead.

Installation

The *Universal Dual Band WiFi Internet Adapter (WNCE3001) Installation Guide* included in the package, explains how to install your Internet adapter. The steps are summarized in this section.

1. You use a computer to set up the Internet adapter. During setup, make sure that your computer is not connected to a router. You can restore the connection after the Internet adapter installation is complete.
 - Disconnect the Ethernet cable from your computer if you use it for a wired network connection.
 - If your computer is wirelessly connected to a network, stop your wireless connection.
2. Connect the Internet adapter.
 - Use an Ethernet cable (included) to connect the Internet adapter to your computer.
 - Use either the USB power cable or the power adapter to provide power to the Internet adapter. (See *Power Connection Options* on page 5.)
3. Open your Internet browser. It automatically displays the setup page. Follow the instructions on the setup page.
4. Disconnect the Ethernet and USB cables from your computer.
5. Connect the Internet adapter to your TV, Box, or Blu-ray player.

If your device doesn't have a USB port, then use the power adapter cable that came with your Internet adapter and plug it into an electrical outlet.
6. Congratulations! Your installation is complete. You can return your computer to its usual set up and begin using the Internet adapter.

Preparing to Change Your Internet Adapter Settings

If you want to change the settings for the Internet adapter after installation, then you need to connect it to a computer while you are making changes.

1. Connect your Internet adapter to a computer with an Ethernet cable.
2. Connect either the USB power cable or the power adapter cable that came in the product package to the rear panel of your Internet adapter.

To supply power to your Internet adapter, use whichever method is more convenient for you. See [Power Connection Options](#) on page 5.

Figure 4. Connecting the WNCE3001 to a laptop

3. Launch an Internet browser such as Mozilla Firefox or Microsoft Internet Explorer. In the address field, enter **http://www.mywifiext.net**.

Unless you changed the settings on the Firmware Upgrade screen (see [Upgrading the Firmware](#) on page 15), the software automatically checks for new firmware at the NETGEAR website. Then the following screen displays:

Device Status	
Hardware Version	V1
Firmware Version	V1.0.0.21NA
GUI Language Version	V1.0.0.14
Wireless Connection Status	
Wireless Connection	Connected
Link Rate (Tx/Rx)	54Mbps / 36Mbps
Name (SSID)	Millers
Region	United States
Channel	6
Security Type	WPA2-PSK [AES]
LAN Port	
MAC Address	c0:3f:0e:40:d3:05
IP Address	192.168.1.11
DHCP Server	OFF
IP Subnet Mask	255.255.255.0
Gateway IP Address	192.168.1.1
DNS Server	192.168.1.1

[Show Statistics](#) [DHCP Connection](#)

Device Status Help
You can use the Device Status screen to check the current settings and statistics for your device. This screen shows you the current settings. If something needs to be changed, you will have to change it on the relevant screen.
Hardware Version: This is the hardware version of this device.
Firmware Version: This is the current software the device is using. This will change if you upgrade your device.
GUI Language Version: This is the current language version the device GUI is using. This will change if you upgrade your device.
Wireless Connection Status: These are the current wireless connection status.
• Wireless Connection - indicates the wireless connection is **Connect** or **Disconnect**.
• Link Rate (Tx/Rx) - indicates the

The Device Status screen shows what the current settings are for the Internet adapter. A menu in the left pane allows you to view or change the settings.

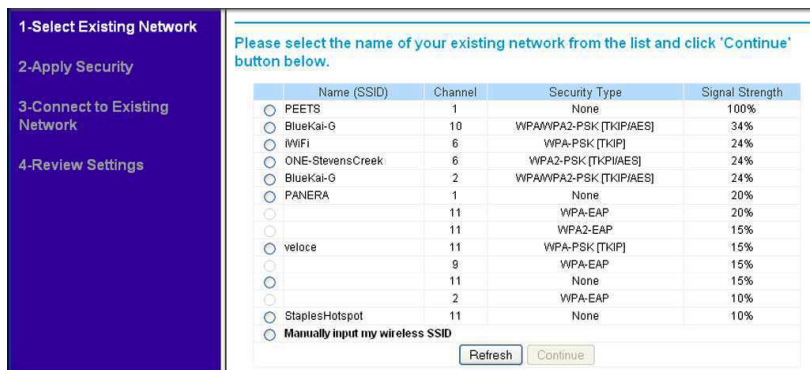

Using the Smart Wizard to Change the Setup

The Smart Wizard helps you set up your Internet adapter. For information about advanced configuration, see *Chapter 2, Advanced Settings*.

The *Universal Dual Band WiFi Internet Adapter (WNCE3001) Installation Guide* included in the package, explains how to install your Internet adapter. During installation, when you launch your Internet browser, the Smart Wizard automatically displays.

After installation, to use the Smart Wizard again:

1. Connect the Internet adapter to a computer and go to <http://www.mywifiext.net> as described in *Preparing to Change Your Internet Adapter Settings* on page 6.
2. From the menu on the left, select **Setup Wizard**. The following screen displays:

This is the same Smart Wizard that displays during installation as described in the Installation Guide.

3. You can select a network from the list, or select the **Manually input my wireless SSID** radio button. Click **Continue**. When you have chosen the network that you want to join, the next wizard screen displays. Follow the onscreen prompts to connect to a wireless network:

4. When the Review Settings screen displays, click **Finish**. If you are done making changes, disconnect your Internet adapter from your computer, and reconnect it to the device on which you want to use it.

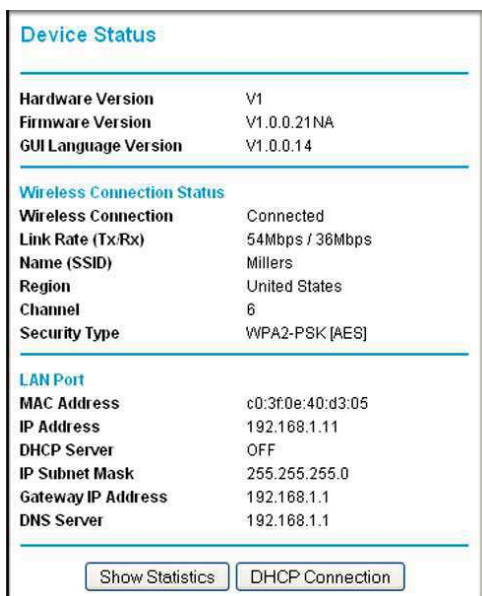

Advanced Settings

2

To change advanced settings, connect the Internet adapter to your computer and use your Internet browser to go to <http://www.mywifiext.net> as described in *Preparing to Change Your Internet Adapter Settings* on page 6.

Device Status Screen

When you connect to <http://www.mywifiext.net>, after the automatic firmware check, the Device Status screen displays:

Device Status	
Hardware Version	V1
Firmware Version	V1.0.0.21NA
GUI Language Version	V1.0.0.14
Wireless Connection Status	
Wireless Connection	Connected
Link Rate (Tx/Rx)	54Mbps / 36Mbps
Name (SSID)	Millers
Region	United States
Channel	6
Security Type	WPA2-PSK [AES]
LAN Port	
MAC Address	c0:3f:0e:40:d3:05
IP Address	192.168.1.11
DHCP Server	OFF
IP Subnet Mask	255.255.255.0
Gateway IP Address	192.168.1.1
DNS Server	192.168.1.1

Buttons: Show Statistics, DHCP Connection

This screen shows the current settings and the status of your Internet adapter.

- You can click **Show Statistics** to see device performance statistics such as the number of packets sent and number of packets received for each port. See *Show Statistics* on page 11.
- Click **DHCP Status** to see information about your current DHCP connection. See *DHCP Connection Status* on page 12.
- The following table describes the fields in the Device Status screen.

Table 1. Device Status Settings

Field		Description
Device Status	Hardware Version	The hardware version of the Internet adapter.
	Firmware Version	The current firmware version of the Internet adapter. If you upgrade the firmware, this field changes.
	GUI Language Version	The language version running on the Internet adapter. If you upgrade the firmware, this field changes.
Wireless Connection Status	Wireless Connection	The status of your wireless connection (connected or disconnected).
	Link Rate	The actual transmission (Tx) and receive (Rx) link rate in the current wireless connection
	Name (SSID)	Your Internet adapter is set up to connect to this SSID, also called the wireless name.
	Region	The location of the Internet adapter.
	Channel	The wireless channel of the network.
	Security Type	The security setting for the wireless network.
LAN Port	MAC Address	The physical address of the Internet adapter, as seen from the local area network (LAN).
	IP Address	The IP address of the Internet adapter. The default is 192.168.1.251.
	DHCP Server	Identifies the network DHCP server on the wireless network.
	IP Subnet Mask	The IP subnet mask associated with the LAN IP address of the Internet adapter. The default is 255.255.255.0.
	Gateway IP Address	The IP address of the wireless network gateway.
	DNS Server	The IP address of the Domain Name Server (DNS) of the wireless network.

Show Statistics

On the Device Status screen, click **Show Statistics** to display the following screen:

System Up Time 00:14:12

Port	Status	TxPkts	RxPkts	Collisions	Tx B/s	Rx B/s	Up Time
LAN	100M/Full	1848	2889	0	238	2558	00:12:02
WLAN	300Mbps	2547	10870	0	0	3702	00:12:24

Poll Interval: (secs)

Table 2. Show Statistics Fields

Field	Description
LAN or WLAN	The statistics for the LAN (local), and wireless LAN (WLAN) ports. For each port, the screen displays the following:
Status	The link status of the port.
TxPkts	The number of packets transmitted on this port since reset or the connection was established.
RxPkts	The number of packets received on this port since reset or the connection was established.
Collisions	The number of collisions on this port since reset or the connection was established.
Tx B/s	The current line utilization—percentage of current bandwidth used on this port.
Rx B/s	The average line utilization for this port.
Up Time	The time elapsed since the last power cycle, reset, or when the connection was established.
Poll Interval	Specify the poll interval frequency. If you change this value, click Set Interval so that your change takes effect.

DHCP Connection Status

On the Device Status screen, click **DHCP Connection Status** to view the following screen:

Connection Status	
IP Address	192.168.1.11
Subnet Mask	255.255.255.0
Default Gateway	192.168.1.1
DHCP Server	192.168.1.1
DNS Server	192.168.1.1 0.0.0.0
Lease Obtained	0 Day,00 Hours,01 Minutes,58 Seconds
Lease Expires	0 Day,23 Hours,58 Minutes,02 Seconds

Close Window

This screen shows the status of the Internet connection.

Table 3. Connection Status Fields

Field	Description
IP Address	The IP address of the wireless network router.
Subnet Mask	The subnet mask associated with the IP address.
Default Gateway	The IP address of the gateway.
DHCP Server	The IP address of the DHCP server.
DNS Server	The IP address of the domain name server (DNS).
Lease Obtained	The date when the lease was obtained.
Lease Expires	The date when the lease expires.

IP Address

From the Internet adapter menu at <http://www.mywifnext.net>, under the Maintenance heading, select **IP Address**. The following screen displays:

Device's IP Address

Get Dynamically From Router
 Use Static IP Address

IP Address: 192 . 168 . 1 . 251
 IP Subnet Mask: 255 . 255 . 255 . 0
 Gateway IP Address: 0 . 0 . 0 . 0
 Primary DNS: 0 . 0 . 0 . 0
 Secondary DNS: 0 . 0 . 0 . 0

Apply Cancel

This screen shows whether the Internet adapter is set to get its IP address dynamically from the router (this is the most common setting), or is set as a static IP address.

- **Get Dynamically From Router:** The wireless network router assigns an IP address when the Internet adapter connects to its wireless network. Most networks are set up so that the router automatically does this.
- **Use Static IP Address:** Specify a static IP address. This is not usually necessary. If you set this up, you should be technically experienced or have a technically experienced person help you.
 - IP Address: The static IP address.
 - IP Subnet Mask: The subnet mask associated with the IP address.
 - Gateway IP Address:
 - Primary DNS: The primary domain name server (DNS).
 - Secondary DNS: The secondary domain name server (DNS).

Managing Your Configuration Settings

From the Internet adapter menu at <http://www.mywifnext.net>, under the Maintenance heading, select **Backup Settings**. The following screen displays

Backup Settings

Save a copy of current settings
 Back Up

Restore saved settings from a file
 Browse...
 Restore

Revert to factory default settings
 Erase

The Backup and Restore options in the Backup Settings screen let you save and retrieve a file containing your Internet adapter's configuration settings. Once you have your Internet adapter working correctly, you should back up the information to have it available if something goes wrong. When you back up the settings, they are saved as a file on your computer. You can restore the device's settings from this file.

Backing Up Settings

1. Click **Back Up**. Your browser extracts the configuration file from the Internet adapter.
2. If you do not have your browser set up to save downloaded files automatically, locate where you want to save the file.
3. You can give the file a meaningful name at this time, such as *internet_adapter.cfg*.

Restoring Settings

1. On the Backup screen, click **Browse**.
2. Locate and select the previously saved backup file.
3. Click **Restore**.

A screen displays letting you know that the device has been successfully restored to the previous settings. The Internet adapter will restart. This will take about 1 minute.

CAUTION:

Do not try to go online, turn off the Internet adapter, shut down the computer, or do anything else to the Internet adapter until it finishes restarting!

4. Close the message window.

To restore your settings from a saved configuration file, enter the full path to the file on your computer, or click **Browse** to browse to the file. When you have located it, click **Restore** to send the file to the Internet adapter. The Internet adapter then reboots automatically.

Erasing the Settings

Under some circumstances (for example, if you have lost track of the changes that you made to the Internet adapter settings), you might want to erase the configuration. After an erase, the Internet adapter returns to its factory settings (see [Factory Settings](#) on page 20).

To erase the configuration, click the **Erase** button in the Backup Settings screen.

CAUTION:

Do not try to go online, turn off the Internet adapter, shut down the computer, or do anything else to the Internet adapter until it finishes restarting!

Upgrading the Firmware

Unless you changed the settings in the Firmware Upgrade screen previously, the Internet adapter is set up to check for new firmware automatically at log in.

If you do not want to use the automatic firmware check, clear the **Check for new version upon login** check box.

To check for firmware and upgrade if it is available:

1. From the Internet adapter menu at <http://www.mywifiext.net>, under the Maintenance heading, select **Firmware Upgrade**. The following screen displays:

The screenshot shows a web form titled "Firmware Upgrade". It has a section "Check for New Version from the Internet" with a "Check" button and a checked checkbox "Check for new version upon login". Below that is a section "Locate and select the upgrade file on your hard disk." with a text input field and a "Browse..." button. At the bottom are "Upload" and "Cancel" buttons.

2. Click **Check** to see if new firmware is available. If it is, follow the onscreen prompts to download it onto your computer.
3. Use the **Browse** field to locate and select the new firmware.
4. Click **Upload** to install the new firmware on your Internet adapter.

CAUTION:

Once you start the firmware upgrade, do not try to go online, turn off the Internet adapter, shut down the computer, or do anything else to the Internet adapter until it finishes restarting!

Advanced Wireless Settings

CAUTION:

The Internet adapter is already configured with the optimum settings. Do not alter these settings unless directed by NETGEAR support. Incorrect settings might degrade the wireless performance of the Internet adapter.

To view or change the advanced wireless settings:

From the Internet adapter menu at <http://www.mywifiext.net>, under the Advanced heading, select **Wireless Settings**. The following screen displays

You can view or configure the following settings:

- **Fragmentation Length (256-2346):** This is the maximum packet size used for fragmentation. Packets larger than the size programmed in this field are fragmented.
- **CTS/RTS Threshold (1-2347):** The packet size that is used to determine whether it should use the CSMA/CA (Carrier Sense Multiple Access with Collision Avoidance) mechanism for wireless packet transmission.
- **Preamble Mode.** An Auto setting might give slightly better performance. A Long setting might provide a more reliable connection or slightly longer range.

Using Push 'N' Connect (WPS)

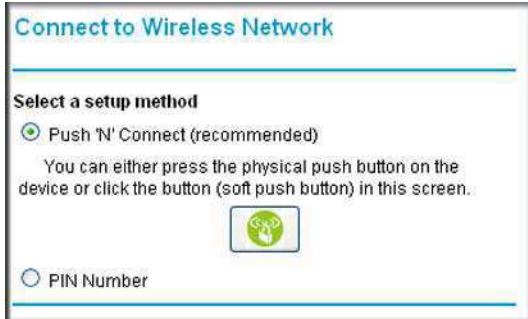

WPS (WiFi Protected Setup) lets you connect to a wireless network without entering its passphrase or wireless key. Instead, you use a button or enter a PIN to connect.

If you have a NETGEAR router, this feature is called Push 'N' Connect. Look for the  or  symbol on the router to make sure the NETGEAR router supports WPS. For non-NETGEAR routers, refer to the user manual to determine if the router supports WPS.

Note: The *Universal Dual Band WiFi Internet Adapter (WNCE3001) Installation Guide* explains how to use WPS during installation.

To join a network using WPS after installation:

1. From the Internet adapter menu at <http://www.mywifiext.net>, under the Setup heading, select **WPS**. The following screen displays:

2. Select a radio button.
 - **Push and Connect (recommended)**. Either click the  button or press the WPS button on the rear panel of the Internet adapter.
 - **PIN Number**. Select the radio button and a PIN displays.

The Internet adapter tries to join the wireless network for 2 minutes if you are using Push 'N' Connect, or 4 minutes if you are using a PIN.

3. Go to the router.
 - If you are using Push 'N' Connect, press the router's WPS button.
 - If you are using a PIN, log in to the router and type the PIN from your Internet adapter in its WPS screen.
 4. Go back to the computer that is connected to the Internet adapter, and make sure that you are connected to the wireless network.
 - When WPS is running, the WLAN LED blinks, alternating between green and amber.
 - If the computer does not connect with WPS, the WLAN LED is solid red for 5 seconds.
 - If the computer does connect using WPS, the WLAN LED is solid green for 5 seconds
- Then the WLAN LED returns to indicating a wireless signal.

Using the USB Power Cable

You can connect the USB power cable to a USB port on a nearby device. If the Internet adapter is not getting enough power, the following can occur:

- The Power LED is red.
- The Internet adapter resets itself intermittently or turns itself off.

Check to make sure that the device with the USB port is powered on. If so, it is likely that the USB port you are connected to does not provide enough power for the Internet adapter. Try using the power adapter. See *Power Connection Options* on page 5.

Connecting to <http://www.mywifiext.net>

When I launched my browser, I got an error page. What can I do?

- Make sure that you include `http://` when you type this URL in the address field of your Internet browser. If you leave it out, you might not be able to connect.
- If you started up your computer, connected the Ethernet cable to the Internet adapter, and launched your browser quickly, the computer might still need a couple of minutes to recognize the Ethernet LAN connection. Try launching your browser again.

If the problem continues, make sure that your Ethernet cable is securely connected to the Internet adapter and the computer, and that the Internet adapter LAN LED is on. If not, reconnect the Ethernet cable, and re-launch your Internet browser.

Connecting to Wireless Networks

To join a wireless network you must know its network name (also called the SSID) so that you can select it. If the network is secure, you must know the passphrase or wireless key. If the Internet adapter does not connect to the network that you chose, the following message displays:

Connection was not established to the selected network.

If this happens it could be due to one of these reasons:

- If you are unable to join the wireless network, it is possible that the network name, or passphrase or key was typed incorrectly. Click **Cancel**, use the Smart Wizard to select the network from the list and retype the passphrase or key. This is case-sensitive. PASSWORD25 is not the same as Password25 or password25. See *Using the Smart Wizard to Change the Setup* on page 8.
- If the Smart Wizard does not find your wireless network (it is not displayed in the Select Existing Network screen) check to see if your wireless network is still up and running. Make sure the router is turned on. If possible, move the Internet adapter closer to the router and click **Try Again**. If after repeated attempts to connect, you are still seeing this message, you might need to upgrade your router to one that provides greater wireless range, or purchase a range extender to extend its wireless range to your location.
- If the Internet adapter WLAN LED is red, this could indicate a poor wireless connection, or it could mean that no data is being sent over the wireless link.
 - First, try using your computer to access the Internet. See if the WLAN LED turns a different color when data is sent wirelessly.
 - If the wireless connection is poor, check the location of the Internet adapter and the router. The best connection is established when there is a clear line of sight between the Internet adapter and the router you are connecting to. Make sure there are no physical obstacles between the Internet adapter and the router, and try to move the Internet adapter closer to the router.

Factory Settings and Technical Specifications

Factory Settings

You can use the **Reset** button on the rear panel to return your adapter to its factory settings.

Figure 5. The Reset button restores factory settings

Use a pin or paperclip to press the **Reset** button and hold it for 5 seconds until the power LED blinks amber.

Table 4.

Factory Settings		
Smart Wizard		Enabled
Wireless	Wireless communication	Disabled
	Wireless Network Name (SSID)	Any (will connect to the first wireless network that responds)
	Security	Disabled

Notification of Compliance

Maximum Wireless Signal Rate Derived from IEEE Standard 802.11 Specifications

Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate.

Safety and Regulatory Notices

FCC Statement

The WNCE3001 has been tested and complies with the specifications for a Class B digital device, pursuant to Part 15 of the FCC Rules.

Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used according to the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which is found by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment or devices
- Connect the equipment to an outlet other than the receiver's
- Consult a dealer or an experienced radio/TV technician for assistance

FCC Caution: Any change or modification to the product not expressly approved by Netgear could void the user's authority to operate the device.

FCC RF Radiation Exposure and SAR Statements

SAR Statement

This NETGEAR WNCE3001 complies with FCC radiation exposure limits set forth for an uncontrolled environment. This WNCE3001 should be installed and operated with minimum distance 20cm between the radiator & your body.

RF Exposure Information

The radio module has been evaluated under FCC Bulletin OET 65C (01-01) and found to be compliant to the requirements as set forth in CFR 47 Sections, 2.1093, and 15.247 (b) (4) addressing RF Exposure from radio frequency devices. This model meets the applicable government requirements for exposure to radio frequency waves.

For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

This device and its antenna(s) must not be co-located or operation in conjunction with any other antenna or transmitter.

This device is going to be operated in 5.15~5.25GHz frequency range, it is restricted in indoor environment only.

Canadian Department of Communications Industry Canada (IC) Notice

This Class B digital apparatus complies with Canadian ICES-003 and RSS-210. Cet appareil numérique de la classe B est conforme à la norme NMB-003 et CNR-210 du Canada.

“To prevent radio interference to the licensed service, this device is intended to be operated indoors and away from windows to provide maximum shielding. Equipment (or its transmit antenna) that is installed outdoors is subject to licensing.”

“Pour empêcher que cet appareil cause du brouillage au service faisant l’objet d’une licence, il doit être utilisé à l’intérieur et devrait être placé loin des fenêtres afin de fournir un écran de blindage maximal. Si le matériel (ou son antenne d’émission) est installé à l’extérieur, il doit faire l’objet d’une licence.”

Europe - EU Declaration of Conformity

A printed copy of the EU Declaration of Conformity certificate for this product is provided in the WNCE3001 product package.
