## DFS device channel plan and software operational declaration

Date: 2023-09-07

We, **Netgear Incorporated**, declare that the device, FCC ID: **PY320100488** Model Name: **RBR350**, **RBS350**, **SXR30**, **SXS30**, does not have Ad Hoc on "non-US frequencies" and/or on" DFS frequencies". Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons.

Below is the channel / frequency plan for the device:

DFS channels: The WLAN driver in the device operates under the control of an host router at all times. Satellite devices passively scan DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Firmware is protected by a special digital signature and CRC checksum. The signature and CRC checksum are calculated and verified before firmware upgrade. Installation of an unauthorized modification to firmware will be prevented by a digital signature and CRC checksum verification failure.
