RE: Netgear Incorporated
FCC ID: PY3ME103

1) Please correct the RF exposure exhibit regarding users manual separation distances to 20 cm to be consistent with the rest of the application.

The rf exposure calculations have been uploaded with revisions to reflect the 20cm separation distance specified in the user's manual.

2) Page 38 of 49 of the users manual states to use shielded cables. Were shielded cables used for the Ethernet? If not, it is best to remove the reference to shielded cables since it is not necessary.

The tests were performed with unshielded ethernet cables. Netgear have been advised that they can remove the requirements for shielded ethernet cables from their manual.

The following files have been uploaded to the ATCB website:

- Response #2.pdf
- MPE Calculations (revised).pdf

If you have any additional questions please contact us at doc@elliottlabs.com
