

# **FCC Test Report**

APPLICANT	: Sony Mobile Communications Inc.
EQUIPMENT	: Wireless Headset
BRAND NAME	: Sony
FCC ID	: PY7-13007N
STANDARD	: FCC Part 15 Subpart C
CLASSIFICATION	: Low Power Communication Device Transmitter (DXX)

The product was received on Oct. 06, 2017 and completely tested on Nov. 13, 2017. We, SPORTON INTERNATIONAL INC., would like to declare that the tested sample has been evaluated in accordance with the procedures and has been in compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

## **1. General Description**

### 1.1. Applicant

#### Sony Mobile Communications Inc.

4-12-3 Higashi-Shinagawa, Shinagawa-ku, Tokyo, 140-0002, Japan

#### 1.2. Manufacturer

#### Sony Mobile Communications Inc.

4-12-3 Higashi-Shinagawa, Shinagawa-ku, Tokyo, 140-0002, Japan

### **1.3. Feature of Equipment Under Test**

10.579MHz

Product Specification subjective to this standard			
Antenna Type	Coil Antenna		

EUT Information List					
HWSWPerformedVersionVersionTest Item					
A	0.0.26	N/A	RF conducted measurement Radiated Spurious Emission		

## **1.4. Product Specification of Equipment Under Test**

Standards-related Product Specification				
Tx/Rx Frequency Range 10.579MHz				
Channel Number	1			
Type of Modulation	ADPCM			

**Remark:** The above EUT's information was declared by manufacturer. Please refer to the specifications or user's manual for more detailed description.

## 1.5. Modification of EUT

No modifications are made to the EUT during all test items.

### 1.6. Test Location

Sporton Lab is accredited to ISO 17025 by Taiwan Accreditation Foundation (TAF code : 1190) and the FCC designation No. TW1190 under the FCC 2.948(e) by Mutual Recognition Agreement (MRA) in FCC Test.

Test Site	SPORTON INTERNATIONAL INC.		
Test Site Location	No. 52, Hwa Ya 1 <sup>st</sup> Rd., Hwa Ya Technology Park,		
	Kwei-Shan District, Tao Yuan City, Taiwan, R.O.C.		
	TEL: +886-3-327-3456		
	FAX: +886-3-328-4978		
Test Site No.	Sporton Site No.		
	TH03-HY	03CH07-HY	

Note: The test site complies with ANSI C63.4 2014 requirement.

## 1.7. Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- FCC Part 15 Subpart C
- ANSI C63.10-2013

**Remark:** All test items were verified and recorded according to the standards and without any deviation during the test.

## 2. Test Configuration of Equipment Under Test

### 2.1. Test Mode

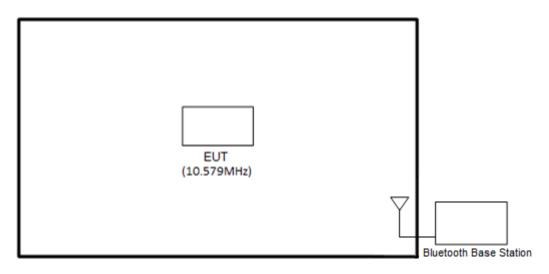

The EUT has been associated with peripherals and configuration operated in a manner tended to maximize its emission characteristics in a typical application.

Frequency range investigated: radiation (9 kHz to the 1000MHz).

For radiated measurement, pre-scanned in three orthogonal panels, X, Y, Z. The worst cases (Z plane) were recorded in this report

Test Items	Function Type					
Radiated Emission Mode 1: 10.579 MHz Link with between the EUT and support equipn						
<b>Remark:</b> For radiated emission test items, Bluetooth base station link with the EUT, and EUT use 10.579 MHz technology to connect with support equipment for continuous transmitting.						

## 2.2. Connection Diagram of Test System

Note: Bluetooth base station is only use support equipment for 10.579 MHz link

## 2.3. Support Unit used in test configuration and system

Item	Equipment	Trade Name	Model Name	FCC ID	Data Cable	Power Cord
1.	Bluetooth Base Station	R&S	CBT32	N/A	N/A	Unshielded, 1.8 m
2.	Wireless Headset	Sony	N/A	PY7-37030I	N/A	N/A

## 3. Test Result

## 3.1. 20dB and 99% Occupied Bandwidth Measurement

#### 3.1.1 Limit of 20dB and 99% Occupied Bandwidth

Reporting only

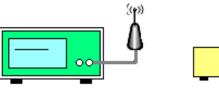

#### 3.1.2 Measuring Instruments

The measuring equipment is listed in the section 4 of this test report.

#### 3.1.3 Test Procedures

- 1. The 20dB bandwidth is measured with a spectrum analyzer connected via a receiver antenna placed near the EUT in peak Max hold mode.
- 2. Use the following spectrum analyzer settings for 99 % Bandwidth measurement.
- 3. For Bandwidth measurement, the RBW= 10kHz, and VBW = 30kHz. Sweep = 20ms;
- 4. Measure and record the results in the test report.

#### 3.1.4 Test Setup

Spectrum Analyzer

		-

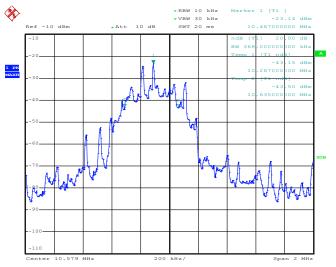

EUT

#### 3.1.5 Test Result of 20dB and 99% Bandwidth

Test Engineer :	Shiming Liu	Temperature :	<b>21~25</b> ℃
rest Engineer :		Relative Humidity :	51~54%

#### 20 dB Bandwidth Plot

Date: 27.0CT.2017 10:01:51

#### 99% Occupied Bandwidth Plot

Date: 27.0CT.2017 10:00:47

### 3.2. Radiated Emission

#### 3.2.1. Limit of Radiated Emission

The emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency	Field Strength	Measurement Distance
(MHz)	(microvolts/meter)	(meters)
0.009 - 0.490	2400/F(kHz)	300
0.490 – 1.705	24000/F(kHz)	30
1.705 – 30.0	30	30
30 – 88	100	3
88 – 216	150	3
216 - 960	200	3
Above 960	500	3

#### 3.2.2. Measuring Instruments

The measuring equipment is listed in the section 4 of this test report.

#### 3.2.3. Measuring Instrument Setting

The following table is the setting of receiver.

Receiver Parameter	Setting
Attenuation	Auto
Frequency Range: 9kHz~150kHz	RBW 200Hz for QP
Frequency Range: 150kHz~30MHz	RBW 9kHz for QP
Frequency Range: 30MHz~1000MHz	RBW 120kHz for Peak

**Note:** The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz. Radiated emission limits in these two bands are based on measurements employing an average detector.

#### 3.2.4. Test Procedures

#### <9kHz-30MHz>

- Configure the EUT according to ANSI C63.10. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the loop receiving antenna mounted antenna tower was placed 1 meters far away from the turntable.
- 2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- 3. The height of the receiving antenna was fixed at one meter above ground to find the maximum emissions field strength.
- 4. For emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver.
- 5. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.

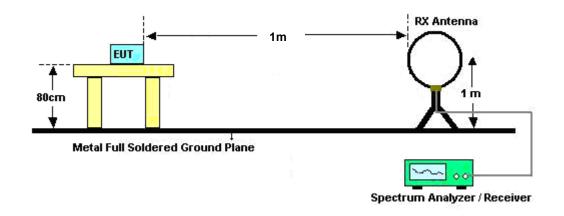

#### <30MHz-1GHz>

- Configure the EUT according to ANSI C63.10. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 1 meters far away from the turntable.
- 2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- 3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
- 4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
- 5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
- 6. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.

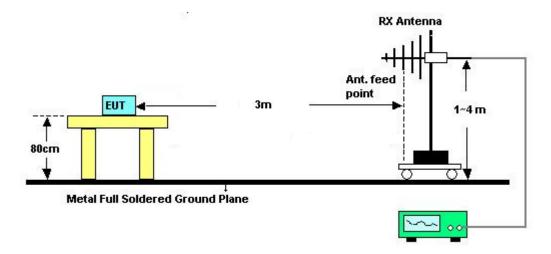

#### 3.2.5. Test Setup of Radiated Emission

For radiated emissions below 30MHz

**Note:** There is a comparison data of both open-field test site and semi-Anechoic chamber, and the result came out very similar.

#### For radiated emissions above 30MHz

#### 3.2.6. Test Result of Radiated Emission (9kHz ~ 30MHz)

## 3.3. Antenna Requirements

#### 3.3.1 Standard Applicable

Except for special regulations, the Low-power Radio-frequency Devices must not be equipped with any jacket for installing an antenna with extension cable. An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited.

The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the FCC rule.

#### 3.3.2 Antenna Anti-Replacement Construction

An embedded-in antenna design is used.

## 4. List of Measuring Equipment

Instrument	Manufacturer	Model No.	Serial No.	Characteristics	Calibration Date	Test Date	Due Date	Remark
Spectrum Analyzer	Rohde & Schwarz	FSP30	101067	9kHz~30GHz	Jun. 26, 2017	Oct. 27, 2017	Jun. 25, 2018	Conducted (TH03-HY)
Hygrometer	Testo	608-H1	34893241	N/A	Nov. 16, 2016	Oct. 27, 2017	Nov. 15, 2017	Conducted (TH03-HY)
RF Cable	HUBER + SUHNER	SUCOFLEX 104	MY842095 21	1GHz~26GHz	Dec. 02, 2016	Oct. 27, 2017	Dec. 01, 2017	Conducted (TH03-HY)
Bilog Antenna	TESEQ	CBL 6111D&00800 N1D01N-06	35419&03	30MHz to 1GHz	Jan. 07, 2017	Nov. 13, 2017	Jan. 06, 2018	Radiation (03CH07-HY)
Hygrometer	Testo	HTC-2	1	N/A	Jun. 27, 2017	Nov. 13, 2017	Jun. 26, 2018	Radiation (03CH07-HY)
Preamplifier	COM-POWER	PA-103A	161241	10MHz-1GHz	Mar. 14, 2017	Nov. 13, 2017	Mar. 13, 2018	Radiation (03CH07-HY)
RF Cable	HUBER + SUHNER	SUCOFLEX 104	Y8420952 1+MY8420 9521	9KHz~30MHz	Jan. 03, 2017	Nov. 13, 2017	Jan. 02, 2018	Radiation (03CH07-HY)
RF Cable	HUBER + SUHNER	SUCOFLEX 104	MY842095 21	30MHz~1GHz	Jan. 03, 2017	Nov. 13, 2017	Jan. 02, 2018	Radiation (03CH07-HY)
Controller	ChainTek	Chaintek 3000	N/A	Control Turn table	N/A	Nov. 13, 2017	N/A	Radiation (03CH07-HY)
Controller	Max-Full	MF7802	MF780208 368	Control Ant Mast	N/A	Nov. 13, 2017	N/A	Radiation (03CH07-HY)
Antenna Mast	Max-Full	MFA520BS	N/A	1m~4m	N/A	Nov. 13, 2017	N/A	Radiation (03CH07-HY)
Turn Table	ChainTek	Chaintek 3000	N/A	0~360 Degree	N/A	Nov. 13, 2017	N/A	Radiation (03CH07-HY)
Loop Cable	Rohde & Schwarz	N/A	N/A	9KHz~30MHz	Jan. 03, 2017	Nov. 13, 2017	Jan. 02, 2018	Radiation (03CH07-HY)
Loop Antenna	Rohde & Schwarz	HFH2-Z2	100488	9 kHz~30 MHz	Oct. 20, 2016	Nov. 13, 2017	Oct. 19, 2018	Radiation (03CH07-HY)
EMI Test Receiver	Agilent	N9038A(MXE)	MY532900 53	20Hz to 26.5GHz	Jan. 12, 2017	Nov. 13, 2017	Jan. 11, 2018	Radiation (03CH07-HY)

## 5. Uncertainty of Evaluation

#### Uncertainty of Radiated Emission Measurement (30 MHz ~ 1000 MHz)

Measuring Uncertainty for a Level of	5.70
Confidence of 95% (U = 2Uc(y))	5.70
