

## PY7-16813Y Data Reuse justification and summary

We are applying data reuse for FCC ID PY7-16813Y (variant) based on parent model FCC ID PY7-26726G. Both devices share the same PCB layout, antennas, and most of the components. The difference between PY7-16813Y and PY7-26726G is described in the appendix of the technical description.

The unlicensed band data for the parent model remains representative for the variant model (equipment classes DXX, DSS, DTS, NII and DCD) and test reports for the parent model plus test report(s) with the spot check data for the variant model have been submitted. The power to be listed on the F-731 and FCC grants for these bands are the values detailed in the parent report as the spot check data shows all values within expected tolerances of the parent model.

FCC ID	802.11 DTS	Bluetooth DTS	Bluetooth DSS	802.11 NII	NFC DXX	WPT DCD
PY7-26726G Parent	FR0D2215C	FR0D2215B	FR0D2215A	FR0D2215E FR0D2215F	FR0D2215D	FA0D2215B
PY7-16813Y Variant	FR0D2217C	FR0D2217B	FR0D2217A	FR0D2217E FR0D2217F	FR0D2217D	FA0D2217B
	Indicates full set of test data. Values in this report to be listed on the grant for these bands.					
	Spot check tests are used to confirm that parent model data is representative for the variant model. Data for these bands is for reference only.					

For the licensed bands (equipment code PCE) we have submitted test reports for the parent model and variant model. The major change between the parent model and variant model is band configuration by Software. The detail is described in the appendix B of the technical description.

We confirm that the test data reuse policy of FCC KDB 484596 D01 Referencing Test Data v01 has been followed and take full responsibility that the test data as referenced from the parent model report represents compliance for the new FCC ID.
