### 1. ATTESTATION OF TEST RESULTS

**COMPANY NAME:** Sony Corporation

1-7-1 Konan Minato-ku Tokyo, 108-0075, Japan

**EUT DESCRIPTION:** GSM/WCDMA/LTE Phone with BT, DTS/UNII a/b/g/n/ac/ax, GPS,

WPT & NFC

SERIAL NUMBER: QV7700EBD8

**SAMPLE RECEIPT DATE: 2022-06-27** 

**DATE TESTED**: 2022-07-27

#### **APPLICABLE STANDARDS**

STANDARD TEST RESULTS

CFR 47 Part 15 Subpart C Refer to Section 2

UL LLC tested the above equipment in accordance with the requirements set forth in the above standards. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. All samples tested were in good operating condition throughout the entire test program. Measurement Uncertainties are published for informational purposes only and were not taken into account unless noted otherwise.

This document may not be altered or revised in any way unless done so by UL LLC and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL LLC will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by a2La, NIST, or any agency of the U.S. government.

| 15.209, 15.205, 15.225 (d) | Radiated Emissions           | See Comment   | Radiated spot checks performed on worst-case channels only to justify data reuse. |  |

#### 3. TEST METHODOLOGY

The tests documented in this report were performed in accordance with FCC CFR 47 Part 2, FCC CFR 47 Part 15, ANSI C63.10-2013 and KDB 484596 D01 Referencing Test Data v01.

#### 4. FACILITIES AND ACCREDITATION

UL LLC is accredited by A2LA, certification # 0751.06, for all testing performed within the scope of this report. Testing was performed at the locations noted below.

|             | Address  | ISED CABID | ISED Company Number | FCC Registration |  |
|-------------|--|------------|---------------------|------------------|--|
|             | Building:<br>12 Laboratory Dr<br>RTP, NC 27709, U.S.A                        | US0067     | 2180C               | 925274           |  |

#### 5. DECISION RULES AND MEASUREMENT UNCERTAINTY

#### 5.1. METROLOGICAL TRACEABILITY

All test and measuring equipment utilized to perform the tests documented in this report are calibrated on a regular basis, with a maximum time between calibrations of one year or the manufacturers' recommendation, whichever is less, and where applicable is traceable to recognized national standards.

#### 5.2. DECISION RULES

The Decision Rule is based on Simple Acceptance in accordance with ISO Guide 98-4:2012 Clause 8.2. (Measurement uncertainty is not taken into account when stating conformity with a specified requirement.)

#### 5.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

| PARAMETER               | U <sub>Lab</sub> |  |  |  |
|-------------------------|------------------|--|--|--|
| All emissions, radiated | 6.01 dB          |  |  |  |

Uncertainty figures are valid to a confidence level of 95%.

#### 5.4. SAMPLE CALCULATION

#### **RADIATED EMISSIONS**

Where relevant, the following sample calculation is provided:

Field Strength (dBuV/m) = Measured Voltage (dBuV) + Antenna Factor (dB/m) + Cable Loss (dB) – Preamp Gain (dB)

36.5 dBuV + 18.7 dB/m + 0.6 dB - 26.9 dB = 28.9 dBuV/m

## 6. EQUIPMENT UNDER TEST

#### 6.1. DESCRIPTION OF EUT

The EUT is a GSM/WCDMA/LTE PHONE with BT, DTS/UNII a/b/g/n/ac/ax, GPS, WPT & NFC.

#### 7. REUSE OF TEST DATA

#### 7.1. INTRODUCTION

According to the manufacturer, FCC ID: PY7-93060R and FCC ID: PY7-17565F unlicensed radios (NFC) are electrically identical. The FCC ID: PY7-93060R test data shall remain representative of FCC ID: PY7-17565F so, FCC ID: PY7-17565F leverages test data from FCC ID: PY7-93060R.

The applicant takes full responsibility that the test data as referenced in this section represents compliance for this FCC ID.

#### 7.2. DEVICES DIFFERENCES

Difference between PY7-93060R and PY7-17565F:

Sony Corporation hereby declares that the hardware NFC is identical among PY7-93060R and PY7-17565F. Therefore, the following report/data of PY7-93060R may represent for PY7-17565F.

#### 7.3. REFERENCE DETAIL

| Equipment Class | Reference<br>FCC ID | Report Title/Section                                |
|-----------------|---------------------|---|
| NFC             | PY7-93060R          | R14311585-E3 v1 FCC NFC REPORT – FINAL/All Sections |

# 7.4. SPOT CHECK VERIFICATION RESULTS SUMMARY

Spot check verification has been done on device PY7-17565F for radiated spurious emissions. The data from the application has been verified through appropriate spot checks to demonstrate compliance for this device as shown in the summary.

| PY7-17565F SPOT CHECK RESULTS |              |          |                    |                           |                           |                           |                           |       |               |  |

# 9. SPOT CHECK DATA

#### **LIMITS**

FCC §15.205, §15.209, and §15.225 (d)

- § 15.225 Operation within the band 13.110-14.010 MHz.
- (a) The field strength of any emissions within the band 13.553-13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters.
- (b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter at 30 meters.
- (c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the field strength of any emissions shall not exceed 106 microvolts/meter at 30 meters.
- (d) The field strength of any emissions appearing outside of the 13.110-14.010 MHz band shall not exceed the general radiated emission limits in § 15.209.
- (e) The frequency tolerance of the carrier signal shall be maintained within ±0.01% of the operating frequency over a temperature variation of −20 degrees to + 50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery.
- (f) In the case of radio frequency powered tags designed to operate with a device authorized under this section, the tag may be approved with the device or be considered as a separate device subject to its own authorization. Powered tags approved with a device under a single application shall be labeled with the same identification number as the device.

#### **TEST PROCEDURE**

The EUT is placed on a non-conducting table 80 cm above the ground plane for measurements below 1GHz. The antenna to EUT distance is 3 meters. The EUT is configured in accordance with ANSI C63.10. The EUT is set to transmit in a continuous mode.

The EUT was investigated in one orientation, X. This was found to be the worst-case orientation of the electrically identical radio referred to previously in section 7.

The frequency range of interest is monitored at a fixed antenna height and EUT azimuth. The EUT is rotated through 360 degrees to maximize emissions received. The antenna is scanned from 1 to 4 meters above the ground plane to further maximize the emission. Measurements are made with the antenna polarized in both the vertical and the horizontal positions.

ANSI C63.10, 2013

The EUT is an intentional radiator that incorporates a digital device, the highest fundamental frequency generated or used in the device is 13.56 MHz; therefore, the frequency range was investigated from 0.15 MHz to the 10<sup>th</sup> harmonic of the highest fundamental frequency, or 1000 MHz, whichever is greater.

#### 9.1. NFC

Note: All measurements were made at a test distance of 3 m. The measured data was extrapolated from the test distance (3m) to the specification distance (300 m from 9-490 kHz and 30 m from 490 kHz - 30 MHz) to clearly show the relative levels of fundamental and spurious emissions and demonstrate compliance with the requirement that the level of any spurious emissions be below the level of the intentionally transmitted signal. The extrapolation factor for the limits were 40\*Log (test distance / specification distance).
