
Data Reuse Summary

PY7-76625R

We are applying data reuse for FCC ID PY7-76625R (variant) of the unlicensed band based on parent model FCC ID PY7-54955X. Both devices share the same PCB layout, antennas and components except as follows:

- NFC circuit (please refer to “theory of operation appendix B” about detail information.)
- Enabled/Disabled FM function by Software (PY7-54955X(parent):disable, PY7-76625R(variant):enable)

The unlicensed band data for the parent model remains representative for the variant model (equipment classes DSS, DTS and NII) and test reports for the parent model plus test report(s) with the spot check data for the variant model have been submitted. The power to be listed on the F-731 and FCC grants for these bands are the values detailed in the parent report as the spot check data shows all values within expected tolerances of the parent model. Please refer to “theory of operation appendix B” about detail information

SAR have been fully tested on the variant model.

We confirm that the test data reuse policy of FCC KDB 484596 D01 Referencing Test Data v01 has been followed and take full responsibility that the test data as referenced from the parent model report represents compliance for the new FCC ID.
