Subject of Request: Permission and evaluation to re-use WLAN a/b/g/n & Bluetoothtest & NFC data of model PM-0873-BV in application of PM-0873-BV

Effective ID: PY7-PM0873/ PM7-PM0872

Dear Sirs,

We, the undersigned, request to re-use the test data from ID: PY7-PM0873 in application of ID: PY7-PM0872

ID: PY7-PM0873 and PY7-PM0872 contain the same PCB, layout, display, I/O digital IC, and battery spec, and confines in the same enclosure. These two ID employs the equivalently identical chipset, circuit layout, antenna of WLAN a/b/g/n, Bluetooth, with the same default setting of transmitted output power level, and same software/firmware controlling radio parameters. The difference between PY7-PM0873 / PY7-PM0872 is PY7-PM0873 support with single SIM and PM7-PM0872 supports with dual SIM. And the WWAN bands are different as well. Since 3G/4G RF circuit are independent from WLAN and Bluetooth, the changes does not affect the characteristic of BT/WLAN unchanged circuits. The Hardware difference is the SIM socket, others are all the same.

Hence, the given DXX/DSS/DTS/NII test report contains the identical test results, which inherent from PY7-PM0873 are:

Description Of Test Case (DXX / DSS / DTS / NII)	Result
AC Power Line Conducted Emission	Inherent from PY7-PM0873
Peak Output Power	Inherent from PY7-PM0873
6dB Bandwidth	Inherent from PY7-PM0873
20dB Bandwidth	Inherent from PY7-PM0873
100 KHz Bandwidth Of Frequency Band Edges	Inherent from PY7-PM0873

Spurious Emission	Inherent from PY7-PM0873
Peak Power Density	Inherent from PY7-PM0873
Antenna Requirement	Inherent from PY7-PM0873
Frequency Separation	Inherent from PY7-PM0873
Number of hopping frequency	Inherent from PY7-PM0873
Time of Occupancy	Inherent from PY7-PM0873
Transmission in case of Absence of Information	Inherent from PY7-PM0873
Frequency Stability	Inherent from PY7-PM0873
SAR Measurement	Inherent from PY7-PM0873

Sincerely,
