Antenna

Use of antenna devices not marketed by Sony Ericsson could damage your radio, reduce performance, and produce SAR levels above the established limits. Do not cover the antenna or use accessories that could block or interfere with the antenna.

Radio frequency (RF) exposure and Specific Absorption Rate (SAR)
When your phone or Bluetooth handsfree is turned on, it emits low levels of radio frequency energy. International safety guidelines have been developed through periodic testing and evaluation of scientific studies. These guidelines establish permitted levels of radio wave exposure. The guidelines include a safety margin designed to assure the safety of all persons and to account for any variations in measurements.

Specific Absorption Rate (SAR) is used to measure radio frequency energy absorbed by the body when using a mobile phone. The SAR value is determined at the highest certified power level in laboratory conditions, but because the phone is designed to use the minimum power necessary to access the chosen network, the actual SAR level can be well below this value. There is no proof of difference in safety based on difference in SAR value. Products with radio transmitters sold in the US must be certified by the Federal Communications Commission (FCC). When required, tests are performed when the phone is placed at the ear and when worn on the body. For body-worn operation, the phone must be tested at a minimum of 15 mm from the body. For ear-to-ear use, only any metal parts in the vicinity of the phone or when properly used with an appropriate Sony Ericsson accessory and worn on the body.

Malware

Malware (short for malicious software) is software that can harm your mobile phone or other computers. Malware or harmful applications can include viruses, worms, spyware, and other unwanted programs. While your device does employ security measures to resist such efforts, Sony Ericsson does not warrant or represent that your device will be impervious to introduction of malware. You can however reduce the risk of malware attacks by using care when downloading content or accepting applications, refraining from opening or clicking on links to messages from unknown sources, using trustworthy services to access the Internet, and only downloading content to your mobile phone from known, reliable sources.

Exposition aux hautes fréquences (HF) et taux d'absorption sélective (SAR)
Lorsque votre téléphone ou mains libres Bluetooth est sous tension, il émet de faibles niveaux d'énergie radiofréquence. Des lignes directrices de sécurité ont été développées à partir d'évaluations complètes et régulières tirées d'études scientifiques. Ces consignes fixent des seuils d'exposition aux ondes radio autorisées. Elles prévoient une marge de sécurité destinée à assurer la sécurité de toutes les personnes, ainsi qu'à prévoir tout écart de mesure.

Le taux d'absorption sélective (SAR, Specific Absorption Rate) permet de mesurer l'énergie hautes fréquences absorbée par le corps humain en cas d'utilisation d'un téléphone mobile. La valeur du taux d'absorption sélective est déterminée au niveau de puissance certifié le plus élevé, mesuré dans des conditions de laboratoire, mais comme le téléphone est conçu pour consommer le moins d'énergie possible pour atteindre le réseau choisi, elle peut être bien inférieure à cette valeur. Il n'existe aucune preuve qu'une différence de SAR puisse entraîner des différences de sécurité.

Les produits avec radio transmetteurs vendus aux États-Unis doivent être certifiés par la FCC (Federal Communications Commission). Le cas échéant, des tests sont effectués lorsque le téléphone est placé au niveau de l'oreille et porté sur le corps. Si vous portez le téléphone sur vous, celui-ci a été testé à une distance de 15 mm au moins du corps. Pour l'usage corps-à-corps, le téléphone doit être testé à une distance de 15 mm au moins du corps. Pour l'usage corps-à-corps, le téléphone doit être testé à une distance de 15 mm au moins du corps. Antiprogramme

Un antiprogramme (malware, abréviation de malicious software en anglais) est un logiciel susceptible de nuire à votre téléphone mobile ou à d'autres ordinateurs. Les antiprogrammes ou applications nuisibles peuvent comprendre des virus, des vers, des logiciels indésirables et autres programmes indésirables. Même si votre appareil applique des mesures de sécurité pour résister à ces intrus, Sony Ericsson ne peut garantir ou affirmer que votre appareil sera impénétrable à toute intrusion d'antiprogramme. Vous pouvez cependant réduire le risque d'attaques d'antiprogrammes en usant de précautions lors du téléchargement de contenu, en évitant de cliquer sur des liens suspects, en ne faisant pas ouvrir ou répondre aux messages provenant de sources inconnues, en utilisant des services de confiance pour accéder à Internet et en ne téléchargant sur votre téléphone mobile que le contenu provenant de sources connues et fiables.

Accessoires

Utilisez exclusivement des accessoires d'origine de marque Sony Ericsson, et faites uniquement appel à des partenaires de services certifiés.
