## Reply to PBA Tracking #703553

**FCC ID: PY7A3880043**

### **Subject: MPR, Maximum Power Reduction Implementation**

The implementation of HSUPA power reduction is compliant with 3GPP TS 34.121 specification.

The specification reduces the lower output power limit for subtests 2 and 4 by 2 dB, though not requiring power reduction. As you have observed, output power is reduced by somewhat less than 2 dB for subtests 2 and 4.

Qualcomm has confirmed that this behavior is as expected for this platform. In addition, Sony Ericsson RF designers have confirmed that the reported conducted power measurements for the various subtests were correctly measured according to 3GPP TS 34.121 specifications.

Sony Ericsson Mobile Communications hopes that the FCC will allow this filing to go through”.
