## 1 General information

### 1.1 Notes

The test results of this test report relate exclusively to the test item specified in 3.1.1. The CETECOM ICT Services GmbH does not assume responsibility for any conclusions and generalisations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of the CETECOM ICT Services GmbH.

### 3.1.3 RF Technical Brief Cover Sheet acc. To RSS-102

All Fields must be completed with the requested information or the following codes: N/A for Not Applicable, N/P for Not Performed or N/V for Not Available. Where applicable, check appropriate box.

1. COMPANY NUMBER: **4170B**

2. MODEL NUMBER: **DDA-0002025**

3. MANUFACTURER: **Sony Ericsson Mobile Communications AB**

4. TYPE OF EVALUATION: **© RF Evaluation**

- Evaluated against exposure limits: General Public Use  Controlled Use
- Duty cycle used in evaluation: 99 %
- Standard used for evaluation: RSS-102 Issue 2 (2005-11)
- Measurement distance: 0.20 m
- RF value: 0.0011 V/m  A/m  W/m   
Measured  Computed  Calculated

#### Declaration of RF Exposure Compliance

#### ATTESTATION:

I attest that the information provided in this test report are correct; that a Technical Brief was prepared and the information it contains is correct; that the device evaluation was performed or supervised by me; that applicable measurement methods and evaluation methodologies have been followed and that the device meets the SAR and/or RF exposure limits of RSS-102.

Name: Meheza Kpelou Meheza  
Title: Engineer  
Company: Cetecom ICT Services GmbH

### 3.1.4 EUT operating modes

| EUT operating mode no.*) | Description of operating modes | Additional information                         |
|--------------------------|--------------------------------|--|
| Op. 0                    | Normal mode                    | Normal temperature and power source conditions |
| Op. 1                    |                                | low temperature, low power source conditions   |
| Op. 2                    |                                | low temperature, high power source conditions  |
| Op. 3                    |                                | high temperature, low power source conditions  |
| Op. 4                    |                                | high temperature, high power source conditions |

\*) EUT operating mode no. is used to simplify the test plan

### 3.1.5 Extreme conditions testing values

| Description          | Shortcut         | Unit | Value       |
|----------------------|------------------|------|-------------|
| Nominal Temperature  | T <sub>nom</sub> | °C   | <b>+20</b>  |
| Nominal Humidity     | H <sub>nom</sub> | %    | <b>50</b>   |
| Nominal Power Source | V <sub>nom</sub> | V    | <b>3.80</b> |

Type of power source: **DC from power supply**

Deviations from these values are reported in chapter 2

## 4 Summary of Measurement Results and list of all performed test cases

- No deviations from the technical specifications were ascertained  
 There were deviations from the technical specifications ascertained

## 5 RF measurement testing

### 5.1 Description of test set-up

#### 5.1.1 Radiated measurements

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 9 kHz to 25 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are confirmed with specifications ANSI C63.2-1996 clause 15 and ANSI C63.4-2003 clause 4.1.5. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analysers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.4-2003 clause 4.2.

Antennas are confirmed with ANSI C63.2-1996 item 15.

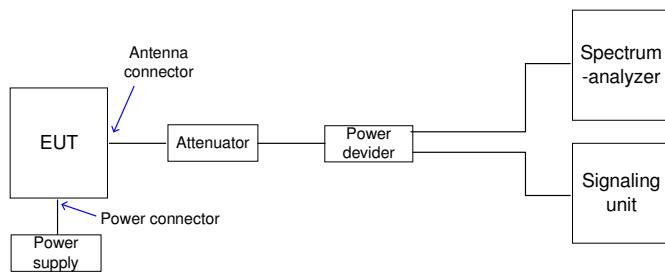

9 kHz - 150 kHz: Quasi Peak measurement, 200 Hz Bandwidth, passive loop antenna.  
 150 kHz - 30 MHz: Quasi Peak measurement, 9 kHz Bandwidth, passive loop antenna.  
 30 MHz - 200 MHz: Quasi Peak measurement, 120 kHz Bandwidth, bi-conical antenna  
 200MHz - 1GHz: Quasi Peak measurement, 120 kHz Bandwidth, log periodic antenna  
 >1GHz: Average, RBW 1MHz, VBW 10 Hz, waveguide horn

All measurements are done in accordance with the Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems DA 00-705 and Appendix A "BLUETOOTH APPROVALS"

The EUT is powered by an external power supply with nominal voltage. The signalling is performed from outside the chamber with a signalling unit (CMU200 or other) by air link using signalling antenna.

#### 5.1.2 Conducted measurements

The EUT's RF signal is coupled out by the antenna connector which is supplied by the manufacturer. The signal is first 10dB attenuated before it is power divided (~6dB loss per branch). One of the signal paths is connected to the communication base Station (CMU200 or other), the other one is connected to the spectrum analyzer. The specific losses for both signal paths are first checked within a calibration. The measurement readings on the signalling unit/spectrum analyzer are corrected by the specific test set-up loss. The attenuator, power divider, signalling unit and the spectrum analyzer are impedance matched on 50 Ohm.

## 5.2 Referenced documents

None

## 5.3 Additional comments

None

## 5.4 Antenna gain

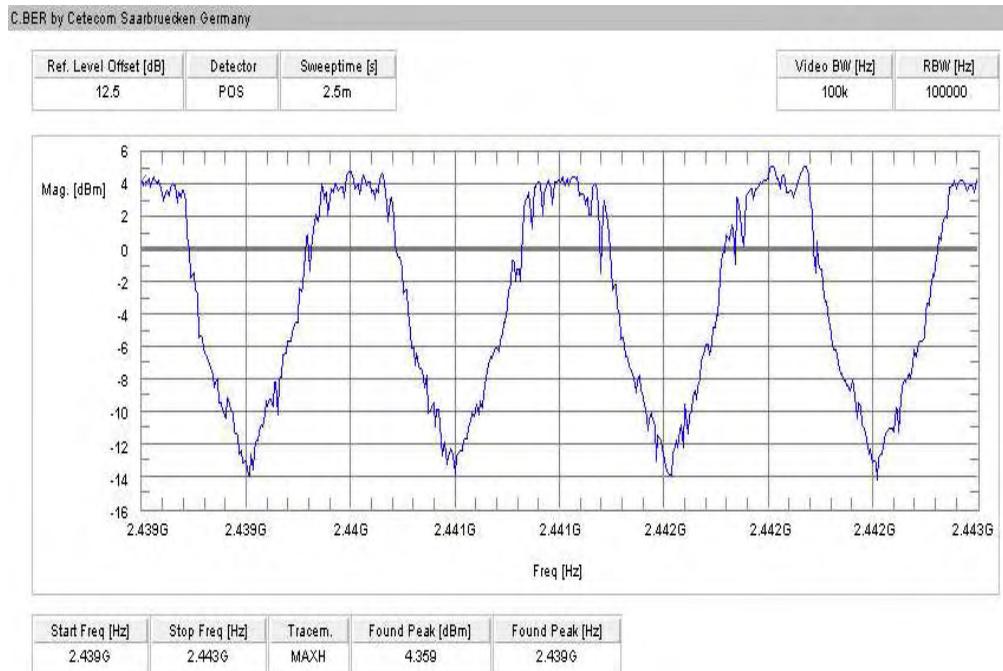

The antenna gain of the complete system is calculated by the difference of radiated power in EIRP and the conducted power of the module.

Modulation: GFSK

Plot 1 of 1:

Result: Channel separation is: ~ 1 MHz

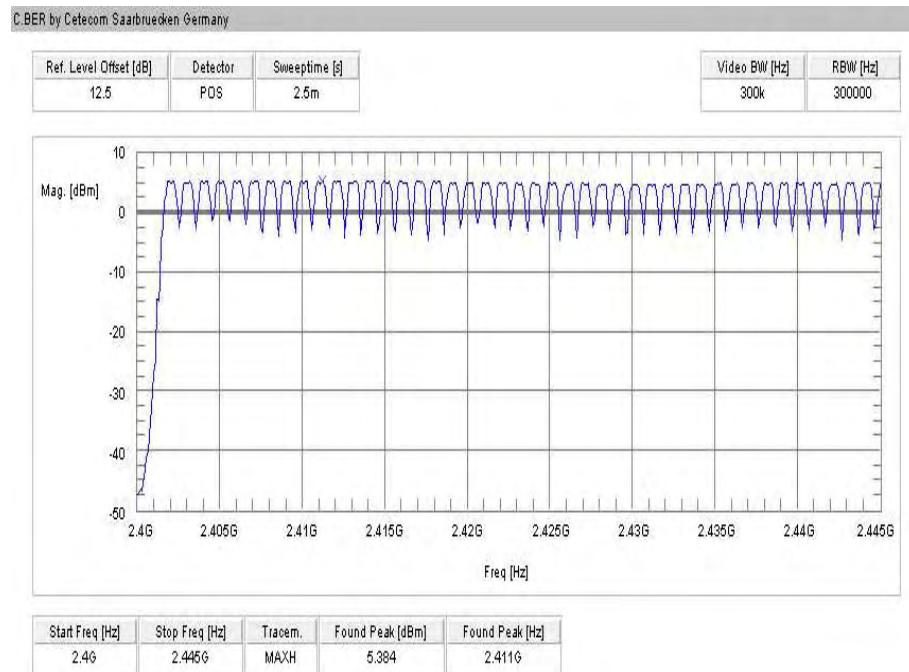

Limits:

|                                   |   |
|-----------------------------------|---|
| Under normal test conditions only | Minimum 25 kHz or 20 dB Bandwidth of the hopping system |
|-----------------------------------|---|

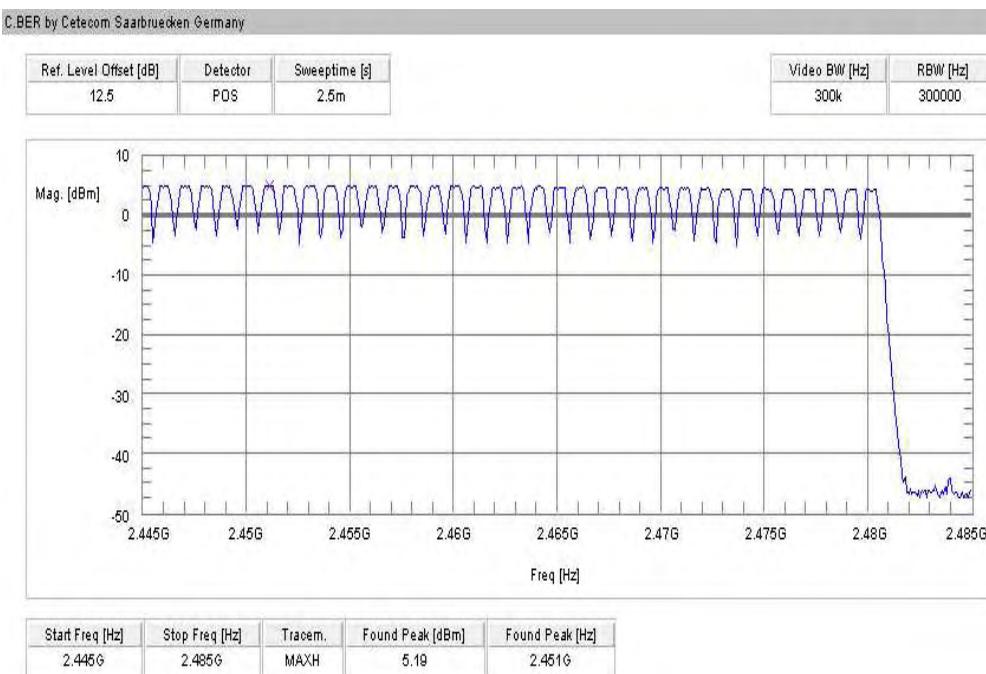

## 5.6 Number of hopping channels §15.247(a)(1)

Modulation: GFSK

Plot 1 of 2:

Plot 2 of 2:

Result: The number of hopping channels is: 79

Limits:

Under normal test conditions only

at least 15 non-overlapping channels

## 5.7 Time of occupancy (dwell time) §15.247(a)(1)(iii)

### For Bluetooth devices:

The dwell time of 0.4 s within a 31.6 second period in data mode is independent from the packet type (packet length).  
The calculation for a 31.6 second period is as follows:

$$\text{Dwell time} = \text{time slot length} * \text{hop rate} / \text{number of hopping channels} * 31.6 \text{ s}$$

Example for a DH1 packet (with a maximum length of one time slot)

$$\text{Dwell time} = 625 \mu\text{s} * 1600 \text{ 1/s} / 79 * 31.6 \text{ s} = 0.4 \text{ s} (\text{in a } 31.6 \text{ s period})$$

For multi-slot packet the hopping is reduced according to the length of the packet.

Example for a DH5 packet (with a maximum length of five time slots)

$$\text{Dwell time} = 5 * 625 \mu\text{s} * 1600 * 1/5 * 1/\text{s} / 79 * 31.6 \text{ s} = 0.4 \text{ s} (\text{in a } 31.6 \text{ s period})$$

This is according the Bluetooth Core Specification V 1.1 & V 1.2 & V2.0 (+ critical errata) for all Bluetooth devices.  
Therefore, all Bluetooth devices comply with the FCC dwell time requirement in the data mode.

This was checked during the Bluetooth Qualification tests.

The Dwell time in hybrid mode is approximately 2.6 ms (in a 12.8s period)

**5.8 Power Spectral density (Hybrid system in Inquiry mode/Page scan)  
§15.247(e)****Not applicable!**

Plot 1 of 1:

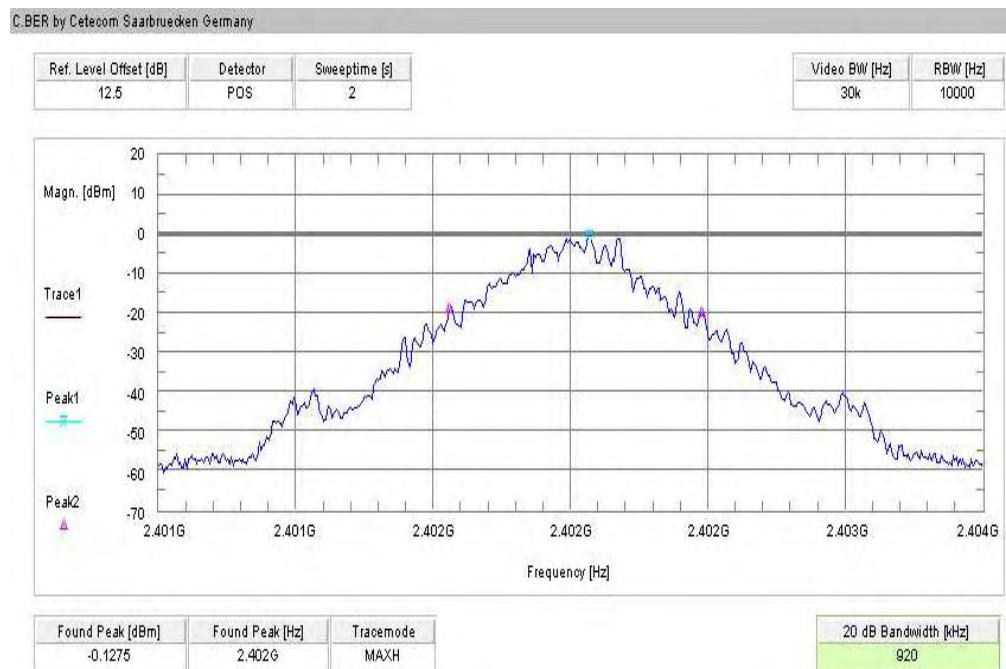

Result: Power density: - dBm/Hz = - dBm / 3 kHz  
Correction factor from dBm/Hz to dBm / 3 kHz is +34.8 dB

Limits:

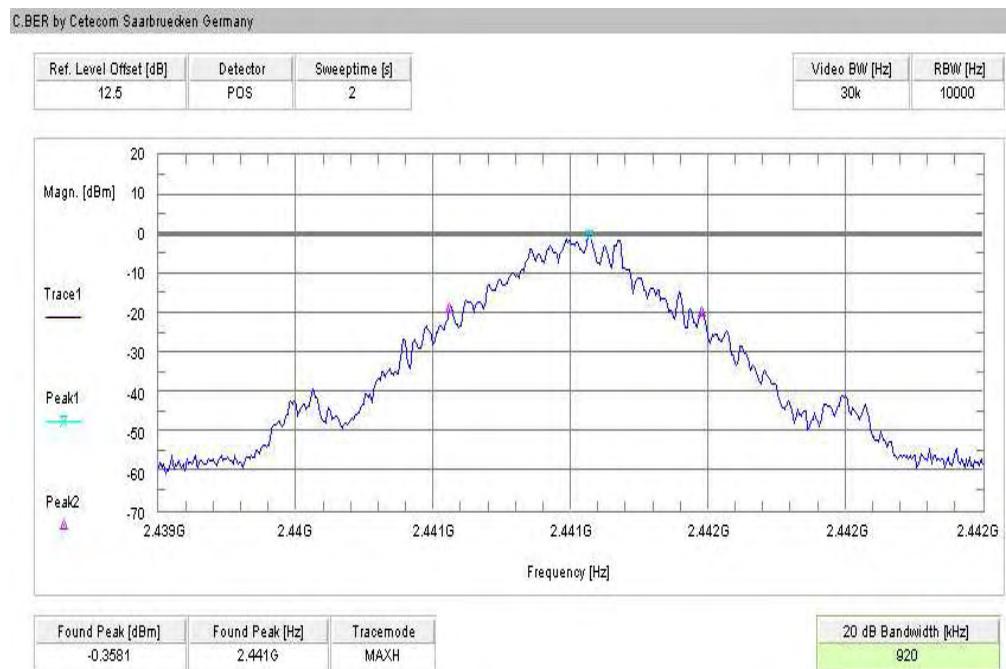

|                                   |   |
|-----------------------------------|---|
| Under normal test conditions only | For digitally modulated systems, the peak power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission |
|-----------------------------------|---|

## 5.9 Spectrum Bandwidth of a FHSS System / 20dB Bandwidth §15.247(a)(1)

## 5.12 Band-edge compliance of conducted emissions §15.247 (d)

Modulation: GFSK

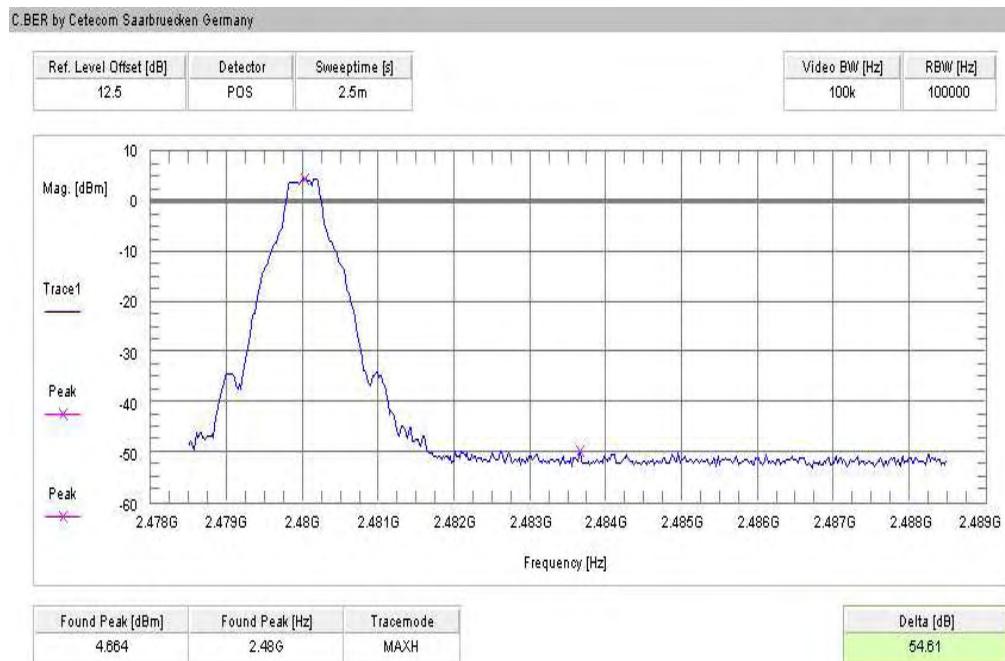

Plot 1 of 4 (hopping off, lowest frequency):

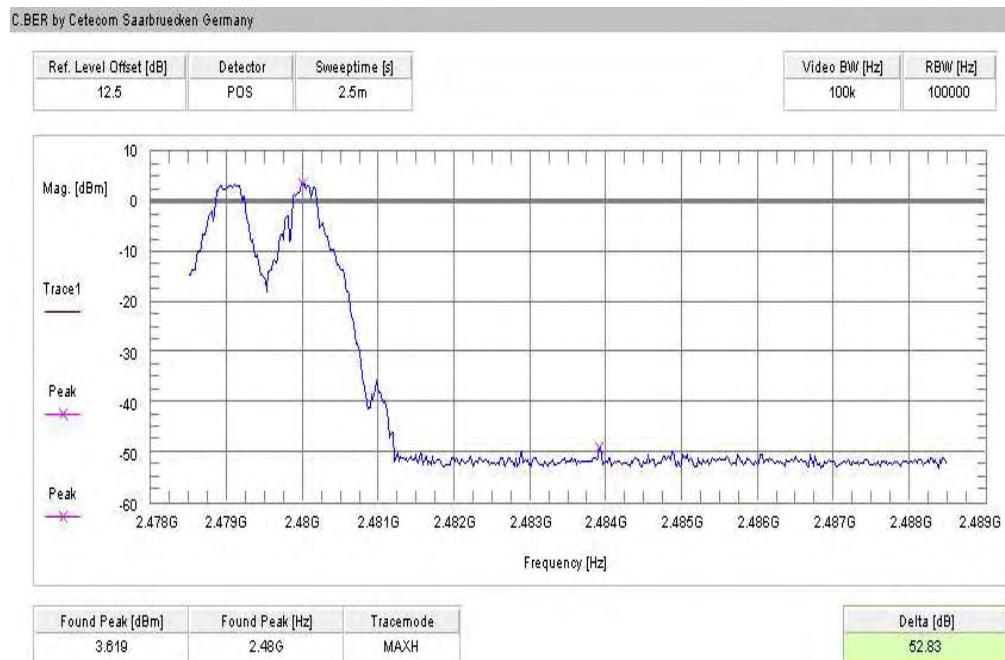

Plot 2 of 4 (hopping on, lowest frequency):

Plot 3 of 4 (hopping off, highest frequency):

Plot 4 of 4 (hopping on, highest frequency):

Results:

| SZENARIO                       | DELTA VALUE [DB] |
|--------------------------------|------------------|
| hopping off, lowest frequency  | > 20 dB          |
| hopping on, lowest frequency   | > 20 dB          |
| hopping off, highest frequency | > 20 dB          |
| hopping on, highest frequency  | > 20 dB          |
| Measurement uncertainty        | ±1,5dB           |

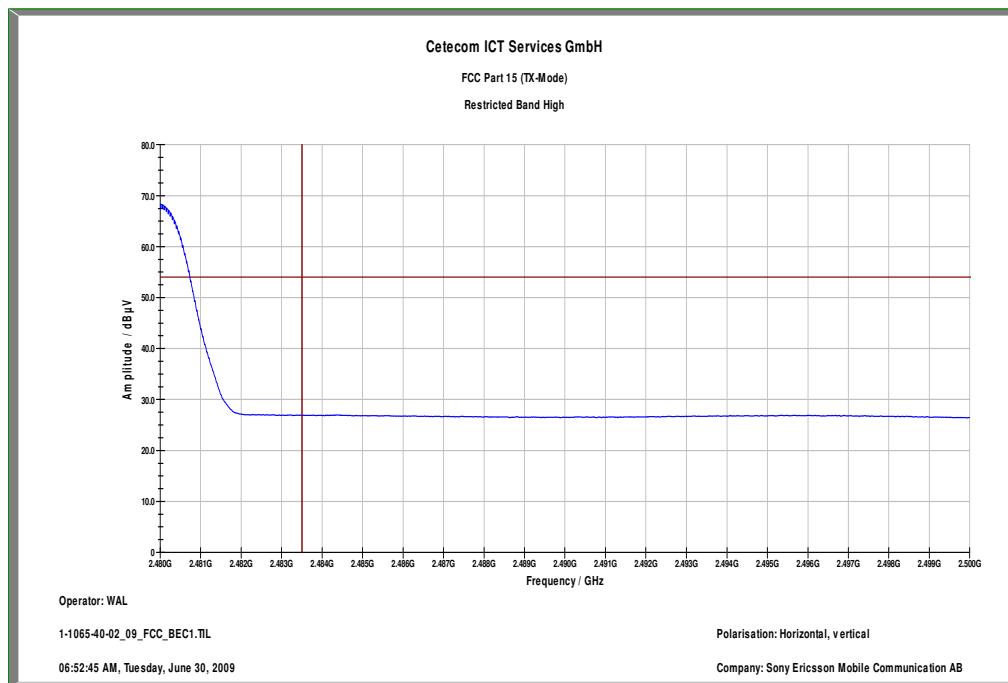

Limits:

|                                   |  |
|-----------------------------------|--|
| Under normal test conditions only | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 5.205(c)). |
|-----------------------------------|--|

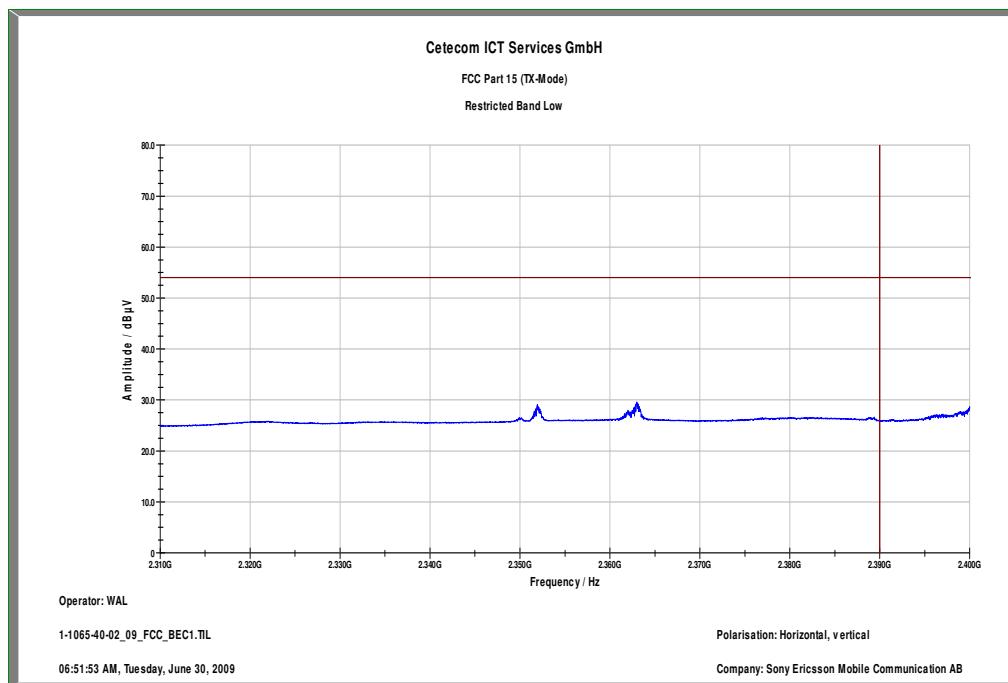

## 5.13 Band-edge compliance of radiated emissions §15.205

### Modulation: GFSK

Plot 1: Band edge compliance at the highest channel with far away emissions

Plot 2: Band edge compliance at the lowest channel with far away emissions

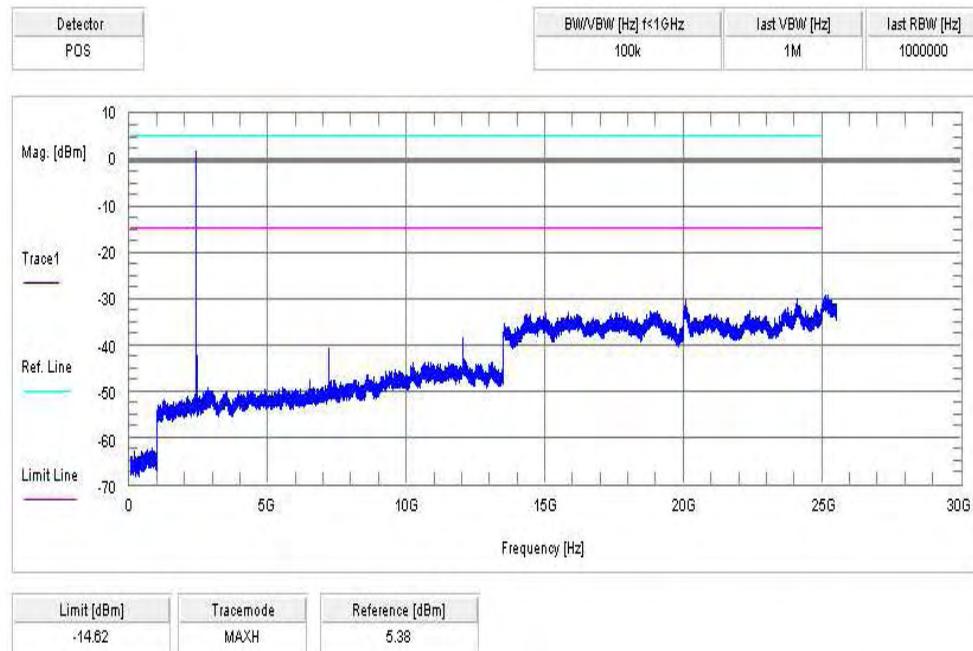

Final verdict: Passed

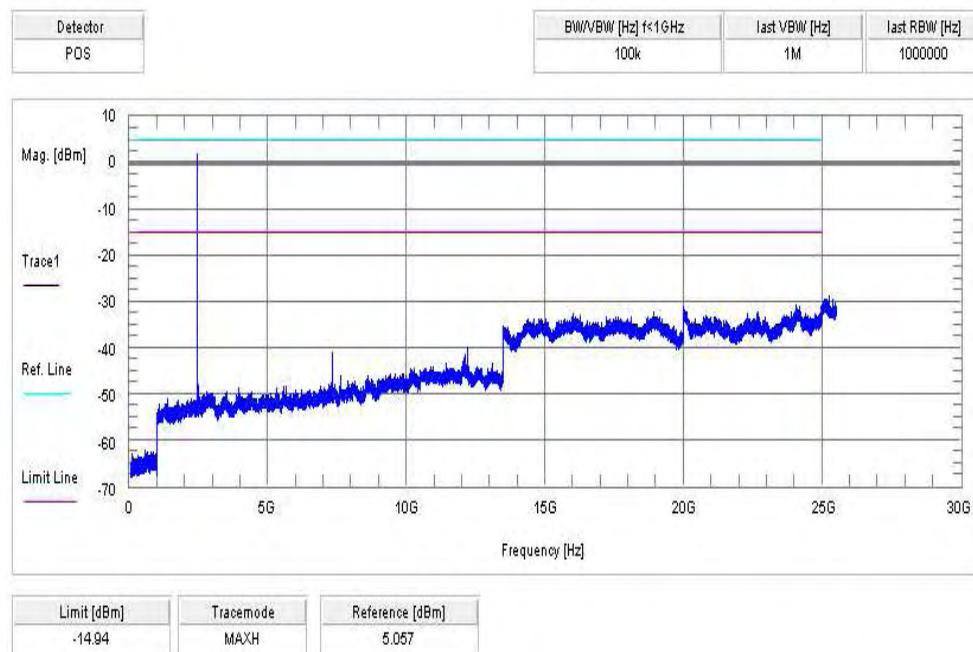

## 5.14 Spurious Emissions - conducted (Transmitter) § 15.247 (c)(1)

Modulation: GFSK

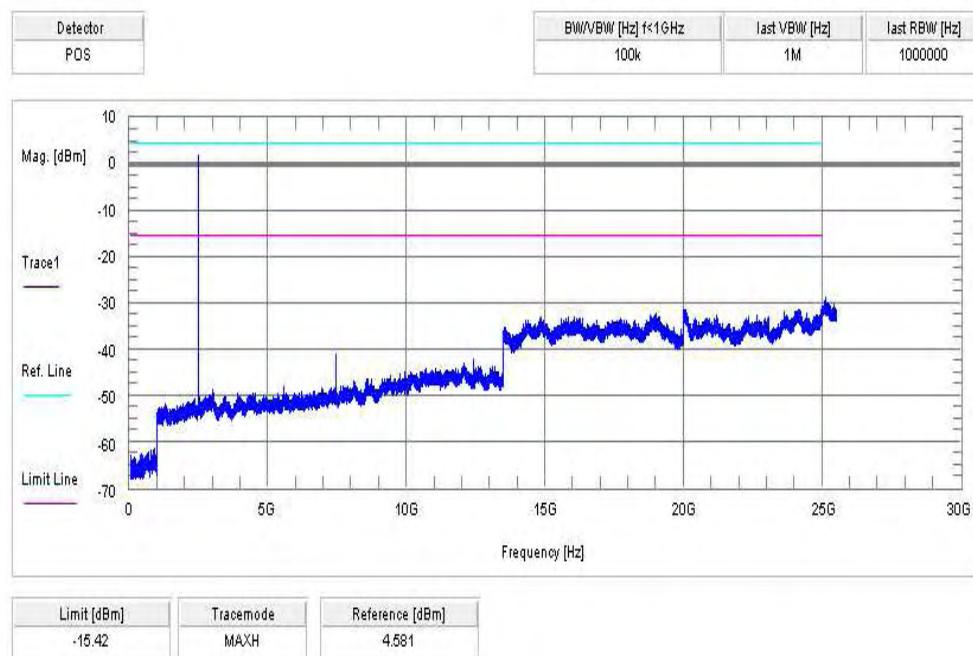

Plot 1 of 3: lowest channel

Plot 2 of 3: middle channel

Plot 3 of 3: highest channel

#### Result & Limits:

| Emission Limitation     |  |                             |                                   |  |                     |

Plot 2: Phase Line

Limits:

Under normal test conditions only

See plots

## 6 Test equipment and ancillaries used for tests

To simplify the identification on each page of the test equipment used, on each page of the test report, each item of test equipment and ancillaries such as cables are identified (numbered) by the Test Laboratory, below.

All reported calibration intervals are calibrations according to the EN/ISO/IEC 17025 standard. These calibrations were performed from an accredited external calibration laboratory.

Additional to these calibrations the laboratory performed comparison measurements with other calibrated systems and performed a weekly chamber inspection.

All used devices are connected with a 10 MHz external reference.

According to the manufacturers' instruction is it possible to establish a calibration interval for the FSP unit of 24 month, if the device has an external 10 MHz reference.
