## 2. TEST POSITIONS

### 2.1 Body Worn Configuration

The device was placed below the flat section of the phantom. The distance between the device and the phantom was kept at the separation distance of 0.5 cm using a flat spacer that was removed before starting the measurements. The device was oriented with all five sides facing the phantom to find the highest result. Two of the orientations were tested with device directly connected to a horizontal or to a vertical USB port of the laptop computer positioned against the phantom, and the other three orientations were tested with the device connected to the laptop computer using the high quality USB cable assembly CA-175D.

Device directly connected to a horizontal USB port of the IBM laptop computer, side 1 facing the phantom. The 0.5 cm spacer was removed before the test.

Device directly connected to a vertical USB port of the Amilo laptop computer, side 4 facing the phantom. The 0.5 cm spacer was removed before the test.

Device positioned below the phantom using a SPEAG device holder and expanded styrofoam blocks, side 2 facing the phantom. Device is connected to a USB port of the laptop computer using a CA-175D cable. The 0.5 cm spacer was removed before the test.

Device positioned below the phantom using a SPEAG device holder and expanded styrofoam blocks, side 3 facing the phantom. Device is connected to a USB port of the laptop computer using a CA-175D cable. The 0.5 cm spacer was removed before the test.

Device positioned below the phantom using a SPEAG device holder and expanded styrofoam blocks, side 5 facing the phantom. Device is connected to a USB port of the laptop computer using a CA-175D cable. The 0.5 cm spacer was removed before the test.
