

16) For output power, please confirm that :

- a) both maximum input and minimum input with maximum gain have been tested. (Please see amplifier, booster, repeater guidance document).

Response to 16)

Thank you for bringing that to our attention. During the initial investigation of the EUT, the system was tested with minimum RF input and maximum RF input power as allowed by the EUT specifications. There was no discernable change in the response or emission levels from the EUT. The test was then performed at nominal RF power input, as it will be the case in actual operation, with RF input levels tightly controlled by the Exciter. Additional verbiage has been added to the updated report, version v0_1.
