COMPONENT COMPATIBILITY

Regarding the components in ROK 104 001 and TVK 1280084 (prodno. LPY 111 352) the following applies.

- The crystal is identical in the two modules/designs.
- The voltage regulator is fully compatible except regarding max supply voltage which is 16V for the LP2985 (on TVK 1280084) and 6V for the LP3985 (on ROK 104 001). Fully compatible means that all characteristic data are almost identical and the small differences do not affect the radio performance.

We have been using both types during development of ROK 104 001 without finding any differences in the module's/designs data.
