

April 19, 2013

FCC ID: Q3E-MB-R1G1

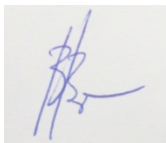

To Whom It May Concern:

The radio of the device, Model MB-R1G1, is a wrist worn arm band that transmits a 2.4 GHz signal to an indoor wireless infrastructure.

We are requesting a Class II permissive change to remove reference to UHF RFID tag from documents submitted with the original filing. The UHF RFID tag was described in the original filing as a passive tag and subject to FCC verification - not certification. The inclusion in the filing was informational only and the certification decision was not based upon the inclusion.

Continued reference in the documents has created confusion to readers with independent interest in the business impact.

Sincerely,

A handwritten signature in blue ink, appearing to be 'Bert Buxton', on a light-colored background.
