Hi Chris,

1. Attached are the updated pages of the test report which include the new power density results.

<<E51221.01.pdf>>

2. The tests were performed today using a span of 300kHz, RBW 3kHz, VBW 10kHz, sweep time 100sec (max. sweep time available on the HP 8542E EMI Receiver). This sweep time =Span/3kHz.

3. I hope that this is OK. Please let us know if you need any additional information.

Regards

Shaik Raz
