

EX-3300 – LF Exciter

The EX3300 Exciters are specialty designed to be embedded in Hand Hygiene dispenser. When a dispenser with an embedded EX3300 Exciter is activated, the Exciters trigger AeroScout's tags that are located near the Exciter and the tags in turn transmit a message to AeroScout Location Receivers or compatible Access Points in range. This provides instant acknowledgment that a tagged staff member has used the dispenser. The AeroScout Visibility System can detect, record and report the rate of usage of the dispensers per user and provides a revolutionary way for health care facilities to monitor the hand hygiene policy compliance of staff members.
