MiCOM Labs is an ISO 17025 Accredited Testing Laboratory

## 1. MAXIMUM PERMISSABLE EXPOSURE

## Calculations for Maximum Permissible Exposure Levels

Power Density $=\operatorname{Pd}\left(\mathrm{mW} / \mathrm{cm}^{2}\right)=\operatorname{EIRP} /\left(4^{*} \pi^{*} \mathrm{~d}^{2}\right)$
EIRP = $P^{*} G$
$\mathrm{P}=$ Peak output power (mW)
$\mathrm{G}=$ Antenna numeric gain (numeric)
$\mathrm{d}=$ Separation distance (cm)
Numeric Gain $=10^{\wedge}(\mathrm{G}(\mathrm{dBi}) / 10)$
Because the EUT belongs to the Occupational/Controlled Exposure the limit of power density is $5 \mathrm{~mW} / \mathrm{cm} 2$.
The calculations in the table below use the highest conducted power values together with the lowest and highest antenna gain specified for the EUT. These calculations represent worst case in terms of the exposure levels.

| Freq. Band (MHz) | Ant <br> Gain <br> $(\mathrm{dBi})$ | Numeric <br> Gain <br> $($ numeric) | Peak Output <br> Power $(\mathrm{dBm})$ | Peak Output <br> Power $(\mathbf{m W})$ | Calculated Power <br> Density $\left(\mathbf{m W / c m}{ }^{2}\right)$ <br> $@ 20 \mathrm{~cm}$ | Power <br> Density Limit <br> $\left(\mathbf{m W} / \mathrm{cm}^{2}\right)$ | Min Calculated <br> safe distance for <br> Limit $(\mathrm{cm})$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $4940-4990$ | 15.0 | 31.62 | 25.14 | 326.59 | 2.05 | 5.0 | 12.82 |
| $4940-4990$ | 32.0 | 1584.89 | 23.99 | 250.61 | 79.02 | 5.0 | 79.51 |

Note: for mobile or fixed location transmitters the minimum separation distance is 20 cm , even if calculations indicate the MPE distance to be less.

## Specification - Maximum Permissible Exposure Limits

The Limit is defined in Table 1 of FCC $\S 1.1310$ for Occupational/Controlled Exposure.
