FCC ID: Q4S87933

Circuit Description

The <u>27.145</u>MHz crystal oscillator drives the base of <u>Q1</u> the final/buffer amplifier. The modulation provided by <u>IC</u>. The output of <u>Q1</u> has the matching network consisting of <u>T1, L3</u> and <u>C9</u> that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 15.5cm long Metal antenna.

There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("6F22" size battery x 1) primary battery

Operation Descriptions

The transmitter is a <u>remote control toy</u> operating at <u>27.145</u>MHz band. The transmitter is powered by a <u>9V</u> battery (<u>"6F22" size battery x 1</u>) and the transmitting frequency is crystal controlled. There are <u>2 trigger</u> to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the <u>27.145</u>MHz carrier frequency.

Remarks:

The transmitter is a $\underline{2}$ trigger transmitter. The EUT continues to transmit while trigger is being pressed. It is trigger transmitter, Modulation by \underline{IC} ; and type is \underline{Pulse} modulation.
