Standard Test Conditions and Engineering Practices

Unless otherwise indicated, the procedures contained in ANSI C63.4-2009 were observed during testing.

Prior to testing, the EUT was tuned up in accordance with the manufacturer's alignment procedures. All external gain controls were maintained at the position of maximum and/or optimum gain throughout the testing.

Measurement results, unless otherwise noted, are worst case measurement.

Unless otherwise indicated in the specific measurement results, the ambient temperature was maintained within the range of 10º to 40ºC (50º to 104ºF) and the relative humidity levels were in the range of 10% to 90%.

Emissions Limitations for Mobile Earth Stations

Engineer: Alex Macon

Test Date: 8/31/15

Test Procedure

The EUT was connected directly to a spectrum analyzer and the conducted spurious emissions were measured to ensure that the EUT met the requirements specified. Only the worst case emission at each frequency was reported. These losses in addition to cable losses were input into the analyzer as a reference level offset to ensure accurate measurements were obtained. Section 25.202(f)(3)

Emissions Limits for Mobile Earth Stations

Engineer: Alex Macon

Test Date: 8/31/15

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the EUT met the requirements for emission limits. Attenuator, cable losses and antenna gain were input into the analyzer as a reference level offset and a correction factor to ensure accurate measurements were obtained.
