

Attestation Letter

About ZTE-J G682, this is an order from Sudan telecom. The Sudan CUSTOM needs a FCC certificate for all electronic product import due to the new law. The PTT function is a speed dial technical base CDMA voice call, the international name is GoTa, and this is a patent technique base CDMA from ZTE 中兴. And it has some special communication protocol in the CDMA network.

The CDMA network have not support the GoTa protocol in Canada and USA. So we have not plan to sell the G682 to those customers. The PTT function of the G682 can just only be used in several countries as follow as:

- China
- Sudan
- Ghana
