## Appendix B. Maximum Permissible Exposure

## 1. Maximum Permissible Exposure

### 1.1. Applicable Standard

Systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess limit for maximum permissible exposure. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as a mobile device whereby a distance of 0.2 m normally can be maintained between the user and the device.
(A) Limits for Occupational / Controlled Exposure

| Frequency Range <br> $(\mathrm{MHz})$ | Electric Field <br> Strength (E) $\mathrm{N} / \mathrm{m})$ | Magnetic Field <br> Strength $(\mathrm{H})(\mathrm{A} / \mathrm{m})$ | Power Density $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Averaging Time <br> $\|\mathrm{E}\|^{2},\|\mathrm{H}\|^{2}$ or S <br> $(\mathrm{minutes})$ |
| :---: | :---: | :---: | :---: | :---: |
| $0.3-3.0$ | 614 | 1.63 | $(100)^{\star}$ | 6 |
| $3.0-30$ | $1842 / \mathrm{f}$ | $4.89 / \mathrm{f}$ | $(900 / \mathrm{f})^{\star}$ | 6 |
| $30-300$ | 61.4 | 0.163 | 1.0 | 6 |
| $300-1500$ |  |  | $\mathrm{~F} / 300$ | 6 |
| $1500-100,000$ |  |  | 5 | 6 |

(B) Limits for General Population / Uncontrolled Exposure

| Frequency Range <br> $(\mathrm{MHz})$ | Electric Field <br> Strength (E) $\mathrm{V} / \mathrm{m})$ | Magnetic Field <br> Strength $(\mathrm{H})(\mathrm{A} / \mathrm{m})$ | Power Density $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Averaging Time <br> $\|\mathrm{E}\|^{2},\|\mathrm{H}\|^{2}$ or S <br> $($ minutes $)$ |
| :---: | :---: | :---: | :---: | :---: |
| $0.3-1.34$ | 614 | 1.63 | $(100)^{\star}$ | 30 |
| $1.34-30$ | $824 / \mathrm{f}$ | $2.19 / \mathrm{f}$ | $(180 / \mathrm{f})^{\star}$ | 30 |
| $30-300$ | 27.5 | 0.073 | 0.2 | 30 |
| $300-1500$ |  |  | $\mathrm{~F} / 1500$ | 30 |
| $1500-100,000$ |  |  | 1.0 | 30 |

Note: $\mathrm{f}=$ frequency in MHz ; *Plane-wave equivalent power density

### 1.2. MPE Calculation Method

$E(\mathrm{~V} / \mathrm{m})=\frac{\sqrt{30 \times P \times G}}{d}$
Power Density: $\quad P d\left(W / \mathrm{m}^{2}\right)=\frac{E^{2}}{377}$
$E=$ Electric field (V/m)
P = Average RF output power (W)
$\mathbf{G}=$ EUT Antenna numeric gain (numeric)
$\mathbf{d}=$ Separation distance between radiator and human body (m)
The formula can be changed to
$P d=\frac{30 \times P \times G}{377 \times d^{2}}$
From the EUT RF output power, the minimum mobile separation distance, $\mathrm{d}=0.2 \mathrm{~m}$, as well as the gain of the used antenna, the RF power density can be obtained.

### 1.3. Calculated Result and Limit

For 5GHz UNII Band:
Antenna Type : Dipole Antenna
Max Conducted Power for IEEE 802.11a: 16.99 dBm

| Directional <br> Gain <br> $(\mathrm{dBi})$ | Antenna Gain <br> (numeric) | Average <br> Output Power <br> $(\mathrm{dBm})$ | Average <br> Output Power <br> $(\mathrm{mW})$ | Power Density <br> $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Limit of Power <br> Density $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Test Result |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5.31 | 3.3963 | 16.9928 | 50.0355 | 0.033824 | 1 | Complies |

Note: Directional gain=GANT+10log(NANT/Nss)

For 5GHz ISM Band:
Antenna Type : Dipole Antenna
Max Conducted Power for IEEE 802.11 ac VHT20: 29.96dBm

| Directional <br> Gain <br> $(\mathrm{dBi})$ | Antenna Gain <br> (numeric) | Average <br> Output Power <br> $(\mathrm{dBm})$ | Average <br> Output Power <br> $(\mathrm{mW})$ | Power Density <br> $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Limit of Power <br> Density $(\mathbf{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Test Result |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 5.92 | 3.9084 | 29.9609 | 991.0291 | 0.770969 | 1 | Complies |

Note: Directional gain $=$ GANT $+10 \log (N A N T / N s s)$

For 2.4GHz Band:
Antenna Type : Dipole Antenna
Max Conducted Power for IEEE 802.11 g: 27.56 dBm

| Antenna Gain <br> $(\mathrm{dBi})$ | Antenna Gain <br> $($ numeric) | Average <br> Output Power <br> $(\mathrm{dBm})$ | Average <br> Output Power <br> $(\mathrm{mW})$ | Power Density <br> $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Limit of Power <br> Density $(\mathrm{S})$ <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Test Result |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 2.82 | 1.9143 | 27.5646 | 570.7678 | 0.217475 | 1 | Complies |

## CONCULSION:

Both of the WLAN 2.4GHz Band and WLAN 5GHz Band can transmit simultaneously, the formula of calculatedthe MPE is:

CPD1 / LPD1 + CPD2 / LPD2 + ......etc. $<1$
CPD = Calculation power density
LPD = Limit of power density
Therefore, the worst-case situation is $0.770969 / 1+0.217475 / 1=0.988444$, which is less than " 1 ". This confirmed that the device comply with FCC 1.1310 MPE limit.
