ARUBA ANTENNA

ANT-605R

The Model ANT-605R's superior performance is derived by combining the benefits of four high gain antenna elements with high isolation between each beam. This Omnidirectional and high isolation improves the SNR in MIMO channels, thereby increasing the range and throughput of WLAN, devices. The Model ANT-605R supports independent Tri-band transmission in the 2.4GHz band, the 4.9 to 5.9GHz Band and 5.9GHz-7.2GHzband, BT and GPS.

Correlated gain values generated by first generating the correlated gains of the co-pol pairs [10log[(10G1/20 + 10G2/20 + … + 10GN/20)2 /NANT] using the spatial gain data. The results were then summed [10log[(10G1/10 + 10G2/10 + … + 10GN/10)/NANT].
