RE: SendFar Technology Co., Ltd.

FCC ID: QA5-ORB-04002

After a review of the submitted information, I have a few comments on the above referenced Application.

**Administrative Issues:**

- 1) The FRN specified on the 731 form does not appear to be for SendFar. Please explain and/or correct.
- 2) The antennas shown in the users manual do not appear to match the device being approved. Please correct.
- 3) The professional installation paragraph in the back of the manual is not applicable and should be removed.
- 4) Any AC power line conducted emissions that exceed the average limits with a QP detector must also be measured with an average detector. It appears that data on pages 15, 17, and 19 needs further test data for an average detector.
- 5) FYI....Page 28 of the users manual states the antenna connectors are SMA, while the device actually contains Reverse N. This should be changed.
- 6) FYI....Page 28 of the users manual mentions the FCC EIRP output power is 24 dBm. The information in the application supports 28 dBm EIRP. This should also be changed.
