

# Test report

337322-3TRFWL

Date of issue: July 4, 2018

Applicant:

**Redline Communications** 

Product:

Broad-band wireless infrastructure product

Model:

RDL-3000-RMG3

FCC ID: IC Registration number:

QC8-RDL3000RMG3 4310A-RDL3000RMG3

### Specifications:

FCC 47 CFR Part 15 Subpart E, §15.407

Unlicensed National Information Infrastructure Devises

RSS-247, Issue 2, Section 6, Feb 2017

Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and Licence-Exempt Local Area Network (LE-LAN) Devices

### Test location

### Section 1. Report summary

### 1.1 Applicant and manufacturer

| Company name | Redline Communications                              |
|--------------|---|
| Address      | 302 Town Center Blvd., Markham, ON, Canada, L3R 0E8 |

### 1.2 Test specifications

| FCC 47 CFR Part 15, Subpart E, Clause 15.407 | Unlicensed National Information Infrastructure Devises  |
|--|---|
| RSS-247, Issue 2, February 2017              | Digital Transmission Systems (DTSs), Frequency Hopping Systems (FHSs) and Licence-Exempt Local Area |
|  | Network (LE-LAN) Devices  |

### 1.3 Test methods

| 789033 D02 General UNII Test Procedures<br>New Rules v01r04 (May 2, 2017) | Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices Part 15, Subpart E |
|---|--|
| 662911 D01 Multiple Transmitter Output v02r01 (October 31, 2013)          | Emissions Testing of Transmitters with Multiple Outputs in the Same Band   |
| 662911 D02 MIMO with Cross Polarized                                      | Emissions testing of transmitters with multiple outputs in the same band (MIMO) with Cross Polarized                   |
| Antenna v01 (October 25, 2011)  | Antenna  |
| ANSI C63.10 v2013   | American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices                         |

### 1.4 Statement of compliance

In the configuration tested, the EUT was found compliant.

Testing was completed against all relevant requirements of the test standard. Results obtained indicate that the product under test complies in full with the requirements tested. The test results relate only to the items tested.

See "Summary of test results" for full details.

### 1.5 Exclusions

None

### 1.6 Test report revision history

| Revision # | Details of changes made to test report |
|------------|--|
| TRF        | Original report issued                 |
|            |  |

## Section 2. Summary of test results

### 2.1 FCC Part 15 Subpart C, general requirements test results

| Part      | Test description          | Verdict           |
|-----------|---------------------------|-------------------|
| §15.31(e) | Variation of power source | Pass <sup>1</sup> |
| §15.203   | Antenna requirement       | Pass <sup>2</sup> |

Notes: <sup>1</sup> Measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, was performed with the supply voltage varied between 85 % and 115 % of the nominal rated supply voltage. No noticeable output power variation was observed <sup>2</sup> The EUT is a professionally installed equipment.

### 2.2 FCC Part 15 Subpart E, test results

| Part                       | Test description   | Verdict        |
|----------------------------|--|----------------|
| §15.403(i)                 | Emission bandwidth   | Pass           |
| §15.407(a)(1)              | Power and density limits within 5.15–5.25 GHz band                     | Not applicable |
| §15.407(a)(2)              | Power and density limits within 5.25–5.35 GHz and 5.47–5.725 GHz bands | Pass           |
| §15.407(a)(3)              | Power and density limits within 5.725–5.85 GHz band                    | Not applicable |
| §15.407(b)(1)              | Undesirable emission limits for 5.15–5.25 GHz band                     | Not applicable |
| §15.407(b)(2)              | Undesirable emission limits for 5.25–5.35 GHz band                     | Pass           |
| §15.407(b)(3)              | Undesirable emission limits for 5.47–5.725 GHz bands                   | Not applicable |
| §15.407(b)(4)              | Undesirable emission limits for 5.725–5.85 GHz band                    | Not applicable |
| §15.407(b)(6)              | Conducted limits for U-NII devices using an AC power line              | Pass           |
| §15.407(e)                 | Minimum 6 dB bandwidth of U-NII devices within the 5.725-5.85 GHz band | Not applicable |
| §15.407(g)                 | Frequency stability  | Pass           |
| §15.407(h)(1)              | Transmit power control (TPC)   | Not applicable |
| §15.407(h)(2) <sup>1</sup> | Dynamic Frequency Selection (DFS)                                      | Not tested     |

Notes: <sup>1</sup>DFS measurements were not tested at Nemko Canada lab. It's up to applicant to provide DFS compliance report.

### 2.3 RSS-Gen, Issue 4, test results

| Part               | Test description   | Verdict        |
|--------------------|--|----------------|
| 6.6                | Occupied Bandwidth   | Pass           |
| 7.1.2 <sup>1</sup> | Receiver radiated emission limits  | Not applicable |
| 7.1.3 <sup>1</sup> | Receiver conducted emission limits                                       | Not applicable |
| 8.8                | Power Line Conducted Emissions Limits for Licence-Exempt Radio Apparatus | Pass           |
| 8.11 <sup>2</sup>  | Frequency stability  | Pass           |

Notes: \(^1\) According to sections 5.2 and 5.3 of RSS-Gen, Issue 4: if EUT does not have a stand-alone receiver neither scanner receiver, then it exempt from receiver requirements. \(^2\) According to section 8.11 of RSS-Gen, Issue 4: if the frequency stability of the licence-exempt radio apparatus is not specified in the applicable standard (RSS), measurement of the frequency stability is not required

### 2.4 ISED RSS-247, Issue 2, test results

| Section          | Test description  | Verdict                 |
|------------------|---|-------------------------|
| 6.1 <sup>1</sup> | Types of Modulation   | Pass <sup>1</sup>       |
| 6.2.1.1          | Power limits for 5150–5250 MHz band   | Not applicable          |
| 6.2.2.1          | Power limits for 5250–5350 MHz band   | Pass                    |
| 6.2.3.1          | Power limits for 5470–5600 MHz and 5650–5725 MHz bands  | Not applicable          |
| 6.2.4.1          | Power limits for 5725–5850 MHz band   | Not applicable          |
| 6.2.4.1          | Minimum 6 dB bandwidth  | Not applicable          |
| 6.2.1.2          | Unwanted emission limits for 5150–5250 MHz band   | Not applicable          |
| 6.2.2.2          | Unwanted emission limits for 5250–5350 MHz band   | Pass                    |
| 6.2.2.2          | TPC requirements for devices with a maximum e.i.r.p. greater than 500 mW  | Not applicable          |
| 6.2.2.3          | Additional requirements for 5250–5350 MHz band  | Pass                    |
| 6.2.3.2          | Unwanted emission limits for 5470–5600 MHz and 5650–5725 MHz bands  | Not applicable          |
| 6.2.4.2          | Unwanted emission limits for 5725–5850 MHz band   | Not applicable          |
| 6.3              | Dynamic Frequency Selection (DFS) for devices operating in the bands 5250–5350 MHz, 5470–5600 MHz and 5650–5725 MHz | Not tested <sup>2</sup> |

Notes:

 $<sup>^{\</sup>rm 1}$  The EUT employs digital modulation: OFDM using BPSK through 256-QAM for sub-carriers

 $<sup>^{2}</sup>$  DFS measurements were not tested at Nemko Canada lab. It's up to applicant to provide DFS compliance report.

## Section 3. Equipment under test (EUT) details

### 3.1 Sample information

| Receipt date           | August 11, 2017     |
|------------------------|---------------------|
| Nemko sample ID number | Item #1 and Item #2 |

### 3.2 EUT information

| Product name  | Broad-band wireless infrastructure product |
|---------------|--|
| Model         | RDL-3000-RMG3                              |
| Serial number | 157SC1710002 and 157SC1710006              |

### 3.3 Technical information

| Applicant IC company number             | 4310A   |
|---|---|
| IC UPN number                           | RDL3000RMG3   |
| All used IC test site(s) Reg. number    | 2040G-5 and 2040A-4   |
| RSS number and Issue number             | RSS-247 Issue 2, Section 6, Feb. 2017   |
| Frequency band                          | 5250–5350 MHz   |
| Frequency Min (MHz)                     | 5252.5 (5 MHz channel), 5255.0 (10 MHz channel), 5260.0 (20 MHz channel)                        |
| Frequency Max (MHz)                     | 5345.0 (5 MHz channel), 5342.5 (10 MHz channel), 5337.5 (20 MHz channel)                        |
| RF power Max (W), Conducted for FCC     | 0.0223 (13.48 dBm at 5 MHz channel), 0.0348 (15.42 dBm at 10 MHz channel),                      |
|   | 0.0764 (18.83 dBm at 20 MHz channel)  |
| RF power Max (W), Conducted for ISED    | 0.0223 (13.48 dBm at 5 MHz channel), 0.0219 (13.41 dBm at 10 MHz channel),                      |
|   | 0.0225 (13.53 dBm at 20 MHz channel)  |
| Field strength, Units @ distance        | N/A   |
| Measured BW (kHz) (26 dB)               | 4680 (5 MHz channel), 9230 (10 MHz channel), 18350 (20 MHz channel)                             |
| Calculated BW (kHz), as per TRC-43      | N/A   |
| Type of modulation                      | OFDM using 256-QAM, 128-QAM, 64-QAM, 16-QAM, QPSK and BPSK modulation for sub-carriers          |
| Emission classification (F1D, G1D, D1D) | 4M09W7D (5 MHz channel), 8M17W7D (10 MHz channel), 16M3W7D (20 MHz channel)                     |
| Transmitter spurious, dBμV/m @ 3 m      | 68.08 (at 5250 MHz for 5 MHz channel), 67.85 (at 5250 MHz for 10 MHz channel),                  |
|   | 67.99 (at 5250 MHz for 20 MHz channel)  |
| Power requirements                      | 48 V <sub>DC</sub> PoE via 120 V <sub>AC</sub> , 60 Hz  |
| Antenna information                     | 10 dBi Omni-directional Antenna Redline AOD-DB-0512-02 and L-Com HG5158DP-10U                   |
|   | 24 dBi Dual Polarization Antenna 4.9–6.1 GHz, Redline 30-00362-00, and Redline 30-00328-50 Dual |
|   | Polarization Antenna 19 dBi   |
|   | 32 dBi Redline A3FT3204LTPD Parabolic Antenna, 4.9–5.8 GHz, 4 degree, dual polarity             |
|   | The EUT is professionally installed.  |

### 3.4 Product description and theory of operation

The EUT is a 2×2 MIMO point-to-multipoint (PMP) and point-to-point (PTP) carrier grade broadband wireless infrastructure product, designed to operate in the 5250–5350 MHz band.

### 3.5 EUT exercise details

The EUT was controlled to transmit at desired frequency and modulation from laptop using web interface at IP address: 192.168.25.2

### 3.6 EUT setup diagram

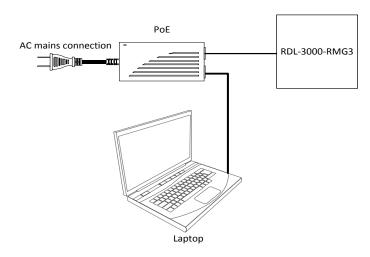

Figure 3.6-1: Setup diagram

### 3.7 EUT sub assemblies

Table 3.7-1: EUT sub assemblies

| Description | Brand name             |              | Serial number |  |
|-------------|------------------------|--------------|---------------|--|
| PoE         | Cincon Electronics Co. | TRG60A-POE-L | 004652        |  |

## **Section 4.** Engineering considerations

### 4.1 Modifications incorporated in the EUT

There were no modifications performed to the EUT during this assessment.

### 4.2 Technical judgment

None

### 4.3 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

### **Section 5.** Test conditions

### 5.1 Atmospheric conditions

| Temperature       | 15–30 °C      |
|-------------------|---------------|
| Relative humidity | 20–75 %       |
| Air pressure      | 860–1060 mbar |

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

### 5.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages ±5 %, for which the equipment was designed.

## **Section 6.** Measurement uncertainty

### 6.1 Uncertainty of measurement

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of K = 2 with 95% certainty.

| Test name                         | Measurement uncertainty, dB |
|-----------------------------------|-----------------------------|
| All antenna port measurements     | 0.55                        |
| Conducted spurious emissions      | 1.13                        |
| Radiated spurious emissions       | 3.78                        |
| AC power line conducted emissions | 3.55                        |

## **Section 7.** Test equipment

### 7.1 Test equipment list

Table 7.1-1: Equipment list

| Equipment                   | Manufacturer           | Model no.    | Asset no. | Cal cycle | Next cal.  |
|-----------------------------|------------------------|--------------|-----------|-----------|------------|
| Flush mount turntable       | Sunol                  | FM2022       | FA002550  | _         | NCR        |
| Controller                  | Sunol                  | SC104V       | FA002551  | _         | NCR        |
| Antenna mast                | Sunol                  | TLT2         | FA002552  | _         | NCR        |

Test name Specification FCC 15.207(a) and RSS-Gen 8.8 AC power line conducted emissions limits

FCC Part 15 Subpart C and RSS-Gen, Issue 4

### Section 8. Testing data

#### 8.1 FCC 15.207(a) and RSS-Gen 8.8 AC power line conducted emissions limits

#### 8.1.1 Definitions and limits

#### FCC §15.407(6)(b):

Any U-NII devices using an AC power line are required to comply also with the conducted limits set forth in §15.207

#### FCC §15.207(a):

Except as shown in paragraphs (b) and (c) of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a  $50 \, \mu H/50 \, \Omega$  line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges.

#### **ISED**

A radio apparatus that is designed to be connected to the public utility (AC) power line shall ensure that the radio frequency voltage, which is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz, shall not exceed the limits in table below.

Unless the requirements applicable to a given device state otherwise, for any radio apparatus equipped to operate from the public utility AC power supply either directly or indirectly (such as with a battery charger), the radio frequency voltage of emissions conducted back onto the AC power lines in the frequency range of 0.15 MHz to 30 MHz shall not exceed the limits shown in table below. The more stringent limit applies at the frequency range boundaries.

Table 8.1-1: Conducted emissions limit

| Frequency of emission | Conducte   | d limit (dBμV) |
|-----------------------|------------|----------------|
| (MHz)                 | Quasi-peak | Average**      |
| 0.15-0.5              | 66 to 56*  | 56 to 46*      |
| 0.5–5                 | 56         | 46             |
| 5–30                  | 60         | 50             |

Note:

- \* The level decreases linearly with the logarithm of the frequency.
- \*\* A linear average detector is required.

Testing data

FCC 15.207(a) and RSS-Gen 8.8 AC power line conducted emissions limits

Specification FCC Part 15 Subpart C and RSS-Gen, Issue 4

### 8.1.3 Observations, settings and special notes

The EUT was set up as tabletop configuration.

The spectral scan has been corrected with transducer factors (i.e. cable loss, LISN factors, and attenuators) for determination of compliance.

A preview measurement was generated with the receiver in continuous scan mode. Emissions detected within 6 dB or above limit were re-measured with the appropriate detector against the correlating limit and recorded as the final measurement.

Receiver settings for preview measurements:

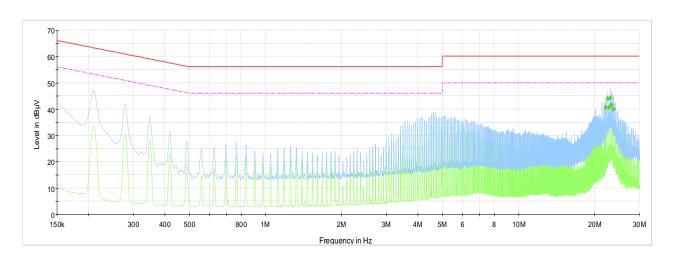

| Resolution bandwidth | 9 kHz            |
|----------------------|------------------|
| Video bandwidth      | 30 kHz           |
| Detector mode        | Peak and Average |
| Trace mode           | Max Hold         |
| Measurement time     | 100 ms           |

#### Receiver settings for final measurements:

| Resolution bandwidth | 9 kHz                  |
|----------------------|------------------------|
| Video bandwidth      | 30 kHz                 |
| Detector mode        | Quasi-Peak and Average |
| Trace mode           | Max Hold               |
| Measurement time     | 100 ms                 |

### 8.2 FCC 15.403(i) Emission bandwidth

### 8.2.1 Definitions and limits

15.403(i) For purposes of this subpart the emission bandwidth shall be determined by measuring the width of the signal between two points, one below the carrier center frequency and one above the carrier center frequency, that are 26 dB down relative to the maximum level of the modulated carrier. Determination of the emissions bandwidth is based on the use of measurement instrumentation employing a peak detector function with an instrument resolution bandwidth approximately equal to 1.0 percent of the emission bandwidth of the device under measurement.

### 8.2.2 Test summary

| Test date     | August 22, 2017 |
|---------------|-----------------|
| Test engineer | Yong Huang      |
| Verdict       | Pass            |

### 8.2.3 Observations, settings and special notes

#### Spectrum analyser settings:

| Resolution bandwidth | approximately 1% of the EBW (50 kHz for 5 MHz channel; 100 kHz for 10 MHz channel; 200 kHz for 20 MHz channel) |
|----------------------|--|

Specification RSS-Gen, Issue 4

### 8.3 RSS-Gen 6.6 Occupied bandwidth

### 8.3.1 Definitions and limits

The emission bandwidth (xdB) is defined as the frequency range between two points, one above and one below the carrier frequency, at which the spectral density of the emission is attenuated x dB below the maximum in-band spectral density of the modulated signal. Spectral density (power per unit bandwidth) is to be measured with a detector of resolution bandwidth in the range of 1% to 5% of the anticipated emission bandwidth, and a video bandwidth at least 3× the resolution bandwidth.

When the occupied bandwidth limit is not stated in the applicable RSS or reference measurement method, the transmitted signal bandwidth shall be reported as the 99% emission bandwidth, as calculated or measured.

#### 8.3.2 Test summary

| Test date     | August 22, 2017 |

**Specification** FCC Part 15 Subpart E and RSS-247 Issue 2

### 8.4 FCC 15.407(a)(2) and RSS-247 6.2.2.1, 5.25–5.35 GHz band output power and spectral density limits

### 8.4.1 Definitions and limits

#### FCC:

For the 5.25–5.35 GHz and 5.47–5.725 GHz bands, the maximum conducted output power over the frequency bands of operation shall not exceed the lesser of 250 mW or 11 dBm + 10 log B, where B is the 26 dB emission bandwidth in megahertz. In addition, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the maximum power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### FCC §15.407(h)(1) Transmit power control (TPC).

U-NII devices shall employ a TPC mechanism. The U-NII device is required to have the capability to operate at least 6 dB below the mean EIRP value of 30 dBm. A TPC mechanism is not required for systems with an e.i.r.p. of less than 500 mW.

#### ISED

For OEM devices installed in vehicles, the maximum e.i.r.p. shall not exceed 30 mW or  $1.76 + 10 \log_{10} B$ , dBm, whichever is less. Devices shall implement TPC in order to have the capability to operate at least 3 dB below the maximum permitted e.i.r.p. of 30 mW.

Devices, other than devices installed in vehicles, shall comply with the following:

- a. The maximum conducted output power shall not exceed 250 mW or 11 + 10 log<sub>10</sub>B, dBm, whichever is less. The power spectral density shall not exceed 11 dBm in any 1.0 MHz band;
- b. The maximum e.i.r.p. shall not exceed 1.0 W or 17 + 10 log<sub>10</sub>B, dBm, whichever is less. B is the 99% emission bandwidth in megahertz. Note that devices with a maximum e.i.r.p. greater than 500 mW shall implement TPC in order to have the capability to operate at least 6 dB below the maximum permitted e.i.r.p. of 1 W.

#### Section 6.2.2.3

Outdoor fixed devices with a maximum e.i.r.p. greater than 200 mW shall comply with the following e.i.r.p. at different elevations, where  $\theta$  is the angle above the local horizontal plane (of the Earth) as shown below:

1. -13 dBW/MHz for  $0^{\circ} \le \theta < 8^{\circ}$ 2.  $-13 - 0.716 (\theta - 8) \text{ dBW/MHz}$  for  $8^{\circ} \le \theta < 40^{\circ}$ 3.  $-35.9 - 1.22 (\theta - 40) \text{ dBW/MHz}$  for  $40^{\circ} \le \theta \le 45^{\circ}$ 4. -42 dBW/MHz for  $\theta > 45^{\circ}$

Specification

FCC 15.407(a)(2) and RSS-247 6.2.2.1 Output power and PSD FCC Part 15 Subpart E and RSS-247 Issue 2

#### 8.4.3 Observations, settings and special notes

Output power was tested using RMS power meter. Spectrum analyzer settings for PSD measurement:

| Resolution bandwidth | 1 MHz  |
|----------------------|--|
| Video bandwidth      | 3 MHz  |
| Frequency span       | 10 MHz (for 5 MHz channel), 20 MHz (for 10 MHz channel), 40 MHz (for 20 MHz channel) |
| Detector mode        | RMS  |
| Trace mode           | Power Averaging over 100 sweeps  |

FCC output power limit calculation for 5 MHz channel:  $11 + 10 \times \text{Log}_{10}$  (EBW) < 24 dBm, hence as  $11 + 10 \times \text{Log}_{10}$  (EBW), dBm; FCC output power limit calculation for 10 MHz channel:  $11 + 10 \times \text{Log}_{10}$  (EBW) < 24 dBm, hence as  $11 + 10 \times \text{Log}_{10}$  (EBW), dBm; FCC output power limit calculation for 20 MHz channel:  $11 + 10 \times \text{Log}_{10}$  (EBW) < 24 dBm, hence as  $11 + 10 \times \text{Log}_{10}$  (EBW), dBm;

ISED EIRP limit calculation for 5 MHz channel:  $17 + 10 \times \text{Log}_{10}$  (OBW) < 30 dBm, hence as  $17 + 10 \times \text{Log}_{10}$  (OBW), dBm; ISED EIRP limit calculation for 10 MHz channel:  $17 + 10 \times \text{Log}_{10}$  (OBW) < 30 dBm, hence as  $17 + 10 \times \text{Log}_{10}$  (OBW), dBm; ISED EIRP limit calculation for 20 MHz channel:  $17 + 10 \times \text{Log}_{10}$  (OBW) < 30 dBm, hence as  $17 + 10 \times \text{Log}_{10}$  (OBW), dBm;

Output power/EIRP/PSD limit adjustment for 10 dBi antenna: Output power/EIRP limit – (10 dBi – 0.7 dB – 6 dBi); Output power/EIRP/PSD limit adjustment for 24 dBi antenna: Output power/EIRP limit – (24 dBi – 0.7 dB – 6 dBi); Output power/EIRP/PSD limit adjustment for 32 dBi antenna: Output power/EIRP limit – (32 dBi – 0.7 dB – 6 dBi); Note: cable loss is 0.7 dB.

Combined average output power was calculated as follows:

$$P_{combined} = 10 \times log_{10} \left( \left( 10^{P_{ch0}/10} \right) + \left( 10^{P_{ch1}/10} \right) \right)$$

EIRP was calculated as follows:

$$EIRP = P_{combined} + antenna gain$$

For antennas with the directional gain greater than 6 dBi, the maximum power spectral density limit was calculated as follows:

For 10 dBi antenna: 11 dBm/1 MHz – (10 dBi – 0.7 dB – 6 dBi) = 7.7 dBm/1 MHz; For 24 dBi antenna: 11 dBm/1 MHz – (24 dBi – 0.7 dB – 6 dBi) = -6.3 dBm/1 MHz; For 32 dBi antenna: 11 dBm/1 MHz – (32 dBi – 0.7 dB – 6 dBi) = -14.3 dBm/1 MHz.

As per ISED requirements, EUT as outdoor fixed devices, antenna #1(10 dBi) and antenna #2(24 dBi) were configured with reduced output power with a maximum e.i.r.p. less than 200 mW. The antenna #3(32 dBi) was verified with pattern complying with the requirement at different elevations.

All ISED power setting were not greater than FCC setting, hence PSD is deemed to be compliance if FCC PSD meets compliance.

### 8.4.4 Test data

### 8.5 FCC 15.407(b) and RSS-247 6.2.2.2 Spurious (out-of-band) emissions

### 8.5.1 Definitions and limits

#### FCC:

- (2) For transmitters operating in the 5.25-5.35 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz.
- (5) The emission measurements shall be performed using a minimum resolution bandwidth of 1 MHz. A lower resolution bandwidth may be employed near the band edge, when necessary, provided the measured energy is integrated to show the total power over 1 MHz.
- (6) Unwanted emissions below 1 GHz must comply with the general field strength limits set forth in § 15.209.
- (7) The provisions of § 15.205 apply to intentional radiators operating under this section.
- (8) When measuring the emission limits, the nominal carrier frequency shall be adjusted as close to the upper and lower frequency block edges as the design of the equipment permits.

#### ISED:

Devices shall comply with the following:

All emissions outside the band 5250-5350 MHz shall not exceed -27 dBm/MHz e.i.r.p.; or

All emissions outside the band 5150–5350 MHz shall not exceed -27 dBm/MHz e.i.r.p. and its power shall comply with the spectral power density for operation within the band 5150–5250 MHz. The device, except devices installed in vehicles, shall be labelled or include in the user manual the following text "for indoor use only."

| Frequency,  | Field str          | Field strength of emissions                |     |  |
|-------------|--------------------|--|-----|--|
| MHz         | μV/m               | dBμV/m                                     | m   |  |
| 0.009-0.490 | 2400/F (F in kHz)  | $67.6 - 20 \times \log_{10}(F)$ (F in kHz) | 300 |  |
| 0.490-1.705 | 24000/F (F in kHz) | $87.6 - 20 \times \log_{10}(F)$ (F in kHz) | 30  |  |
| 1.705-30.0  | 30                 | 29.5                                       | 30  |  |
| 30–88       | 100                | 40.0                                       | 3   |  |

Table 8.5-1: FCC §15.209 and RSS-Gen – Radiated emission limits

Notes: In the emission table above, the tighter limit applies at the band edges.

For frequencies above 1 GHz the limit on peak RF emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test

Table 8.5-2: ISED restricted frequency bands

| MHz             | MHz                 | MHz           | GHz         |

### 8.5.2 Test summary

| Test date:     | August 30, 2017 |
|----------------|-----------------|
| Test engineer: | Yong Huang      |
| Verdict:       | Pass            |

Section 8 Test name Testing data

FCC 15.407(b) and RSS-247 6.2.2.2 Spurious (out-of-band) emissions

**Specification** FCC Part 15 Subpart E and RSS-247 Issue 2

### 8.5.3 Observations, settings and special notes

The spectrum was searched from 30 MHz to 40 GHz while the EUT was transmitting on both MIMO chains simultaneously.

Radiated measurements below 18 GHz were performed at a distance of 3 m.

Radiated measurements above 18 GHz were performed at a distance of 1 m.

All conducted plots below have been corrected with antenna gains, RF cable losses and multiple antenna correction factors.

Where it is not specified in the figure comment, the power settings were set to a maximum between FCC and ISED.

As per customer, the transmitter output signals on the two chains are completely uncorrelated.

Cabinet radiation were performed while both antenna connectors were terminated with 50  $\Omega$  load. No emissions related to RF transmitter were detected within 6 dB below the limit.

Restricted bands Peak limit EIRP equivalent: 74 dB $\mu$ V/m - 95.23 dB = -21.23 dBm

Restricted bands Average limit EIRP equivalent: 54 dB $\mu$ V/m – 95.23 dB = -41.23 dBm

Spectrum analyser for peak conducted measurements within restricted bands below 1 GHz:

| Resolution bandwidth: | 100 kHz  |
|-----------------------|----------|
| Video bandwidth:      | 300 kHz  |
| Detector mode:        | Peak     |
| Trace mode:           | Max Hold |

Spectrum analyser for peak conducted measurements within restricted bands above 1 GHz:

| Resolution bandwidth: | 1 MHz    |
|-----------------------|----------|
| Video bandwidth:      | 3 MHz    |
| Detector mode:        | Peak     |
| Trace mode:           | Max Hold |

Spectrum analyser for average conducted measurements within restricted bands above 1 GHz for frequencies where peak results were above the average limit:

| Resolution bandwidth:       | 1 MHz         |
|-----------------------------|---------------|
| Video bandwidth:            | 3 MHz         |
| Detector mode:              | RMS           |
| Trace mode:                 | Power average |
| Number of averaging traces: | 100           |

Spectrum analyser for peak conducted measurements outside restricted bands:

| Resolution bandwidth: | 1 MHz    |
|-----------------------|----------|
| Video bandwidth:      | 3 MHz    |
| Detector mode:        | Peak     |
| Trace mode:           | Max Hold |

Conducted emissions measurements outside restricted bands were performed on each individual MIMO chain. The reference level offset was adjusted to include antenna directional gain.

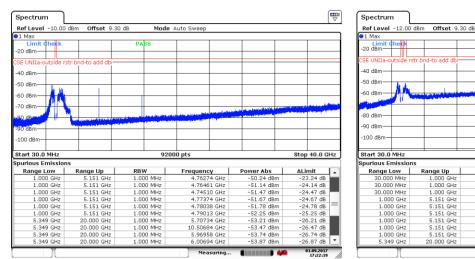

Stop 40.0 GHz
