

Infrastructure mode

WSP-i350 communicate through AP. So, at least one AP is needed to make the infrastructure network. WSP-i350 can talk to wired network hosts because AP relays between wireless LAN stations as well as between wireless LAN station and wired LAN (Ethernet) host.

Ad-hoc Mode

WSP-i350 communicate each other without any AP. So user can make a system more simply. It is proper if there's no wired LAN requirement and it is a small network. Some people call it peer-to-peer mode.

Bluetooth Connection

WSP-i350 can be connected to devices equipped with Bluetooth communication capacity (PDAs, PCs, etc.).

Use the Bluetooth connection function supported by the device to connect to the printer.
