Attn: Reviewing Engineer

RE: Limited Modular Approval

To Whom it May Concern:

Airaya Corp. complies with multiple of the items listed in Section 7.1.1, Modular Construction, of the "General Requirements and Information for the Certification of Radio communications Equipment".

Airaya retains control over the end user, in all bands of its products, by preventing the end user from increasing the output power of the selected band to higher than that defined by the test reports defining the radio operation.

The product has an encrypted challenge/response access method that prevents the end user from access to the manufacturers configuration routines. The routines are the only method for increasing the output power of the product past the local regulatory requirements.

During the manufacturing process, all units being shipped to Canada are configured for the Canadian band requirements. These settings cannot be changed by the software interface provided to the end user.

If any additional information is required, please contact me directly.

Sincerely,

William G. Pabst
