

Dear Timothy,

Here's the updated Manual for this project.

For the comments 7~10:

- 7) Users Manual Page 11 references and incorrect FCC ID. → [FCC ID is corrected.](#)
- 8) This device contains an external GSM antenna connector (i.e. page 2 & Page 14 of the users manual). This will require additional ERP/EIRP information and MPE calculations and possibly spurious emissions. The manual should also provide specific guidance on the antennas approved for use with this connector. Currently this is not covered by this application. → [The applicant deleted all the narrative of Antenna Information in page 11.](#)
- 9) Page 15 mentions that a minimum distance of 2.5 should be maintained between user and device. This is normally required for body worn, but not head used positions. Please correct.
- 10) Within the users manual, the RF exposure info should also explain that the device is not approved for body worn use with any accessories utilizing metal. For instance:
"Body-worn operations are restricted to belt-clips, holsters or similar accessories that have no metallic component in the assembly and must provide at least --cm separation between the device and the user's body."

→ [The statement is modified as Phone Operation in page 15.](#)

Should there be any mistake or problem, please let us know as soon as possible.

Thank you very much for your consideration upon this project!

Best Regards,

Elisa
