

Elisa,

For 3) We are required to list Edge modulation separately on the FCC Certificate because of the different emissions designator. Therefore this information must be provided.

Note that the FCC is not as interested in GPRS as GPRS is only a duty factor difference. However Edge uses a different modulation scheme.

For 4) Please note that for the power measurements PEAK is required under Part 24 - not average....see the following:

24.232

(d) **Peak transmit power must be measured** over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage. The measurement results shall be properly adjusted for any instrument limitations, such as detector response times, limited resolution bandwidth capability when compared to the emission bandwidth, sensitivity, etc., so as to obtain a true peak measurement for the emission in question over the full bandwidth of the channel.

For 5) We are not concerned with the USB connector. We are concerned with the connector labeled #14 on page 1...

Thanks,

Tim
