It has been noted that the test mode was not initiated correctly during the original SAR testing of BCM94301CB, PC3 and PC5. The low value SAR measurements originally recorded are consistent with having no data transmitted during the measurement. Repeat measurements have been made with the test mode initiated correctly and the SAR results show appropriate levels.

The following statement will be added into the user information that accompanies this product:

"This device is approved for use in laptop computers and other portable equipment that has an appropriate PCMCIA or Cardbus slot, where a distance from the antenna to user can be assured to be no less than 1.5cm, during normal operation. Furthermore, the antennas used with this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter within the host device."

The following statement will be added into the user information that accompanies this product:

"For installation in Mobile equipment, such as cable modems or Access Points, this device is only approved where the device is intended to be situated >20cm from the user."
