Ref: Output power programmed in the Broadcom 3x3 MIMO module (Model: BCM94331CSAX) to be used in Apple MacBook Pro, Model No: A1425.

To whom it may concern:

We, **Broadcom Corporation**, hereby declare that the Model: BCM94331CSAX has an application driver that will limit the maximum transmit power levels of the radio as detailed in BCM94331CSAX_Operational Description Final-Rev.A2.

For the Class II permissive change, to add the module into the portable host A1425, the host integrator is required to use the GMc driver where the final shipping power is limited as follows. In order to achieve RF exposure compliance the maximum power levels have been reduced in some cases to levels lower than the original submission, the maximum power levels that are allowed by the A1425 driver are also detailed in BCM94331CSAX_Operational Description Final-Rev.A2.

If you have any questions regarding this application, please feel free to contact me.

Sincerely yours,

A handwritten signature in black ink, appearing to read 'DL', with a long horizontal flourish extending to the right.
