FCC ID: QEABOAT9T

Circuit Description

The $\underline{49.86}$ MHz crystal oscillator drives the base of $\underline{Q1}$ the final/buffer amplifier. The modulation provided by \underline{IC} . The output of $\underline{Q2}$ has the matching network consisting of $\underline{L3}$, $\underline{L4}$ and $\underline{C4}$, $\underline{C5}$ that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a 31cm long Metal antenna.

There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt ("6F22" size battery x 1) primary battery

Operation Descriptions

The transmitter is a <u>remote control toy</u> operating at <u>49.86</u>MHz band. The transmitter is powered by a <u>9V</u> battery (<u>"6F22" size battery x 1</u>) and the transmitting frequency is crystal controlled. There are <u>2 buttons</u> to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the <u>49.86</u>MHz carrier frequency.

Remarks:

The transmitter is a $\underline{2}$ button transmitter. The EUT continues to transmit while button is being pressed. It is button transmitter, Modulation by \underline{IC} ; and type is \underline{Pulse} modulation.
