

## Operation Description

The receiver of RC TRICERATOPS car is powered by 3\*1.5V AA battery. When it received Forward signal from the transmitter, it will move forward.. or else rotation.

Refer to the receiver circuit design, the circuit description is listed as below :

- .. Q1 and associate components are acted as RF receiver.
- .. Q2, Q3, D1 and associate components are acted as control signal decoder.
- .. Q4 ~ Q13 and associate components are acted as motor driving.
