Application No.: HM157040

Date: 2006-07-25

FCC ID: QEAMDM27T

Circuit Description

The $\underline{27.145}$ MHz crystal oscillator drives the base of $\underline{Q1}$ the final/buffer amplifier. The modulation provided by \underline{IC} . The output of $\underline{Q1}$ has the matching network consisting of $\underline{L1}$ and $\underline{C1}$ that limit the harmonic content and effect the proper coupling of the antenna to the output stage.

Antenna, Ground and Power Source

The antenna consists of a <u>24.5cm</u> long Metal Antenna. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a <u>4.5 Volt ("AAA" size battery x 3)</u> primary battery.

Operation Descriptions

The transmitter is a remote control toy operating at 27.148MHz band. The transmitter is powered by a $3 \times 1.5 \text{V}$ battery (AAA) and the transmitting frequency is crystal controlled. There are 2 joystick to control the forward reverse motor and director of movement. The operation is achieved by different combinations of form pulse modulating signal on the 27.148 MHz carrier frequency.

Remarks:

The transmitter is a 2 Joystick transmitter.

The EUT continues to transmit while Joystick is being pressed.

It is Pulse transmitter, Modulation by IC; and type is Pulse modulation.
