

FCC Class 2 Permissive Change  
RM-84

12<sup>th</sup> October, 2006

1.) FCC rules prohibit any change to RF Pout or frequency determining circuitry under the Class II Permissive Change process. The original Grant dated August 19, 2005 shows an EIRP of 1.072 watts. The Test Report and Application you have provided requests a new radiated power of 1.738 watts. This is, quite simply, not allowed. If you wish to retain this new rated power you must file under a new FCC ID. Please advise.

**Response**

No changes have been made to the power tunings for RM-84 since the original filing in August 2005. The apparent differences in output power reported in this Class II submission reflect the measurement uncertainty involved in radiated power measurements.
