

## AWR300 Family Approval Information

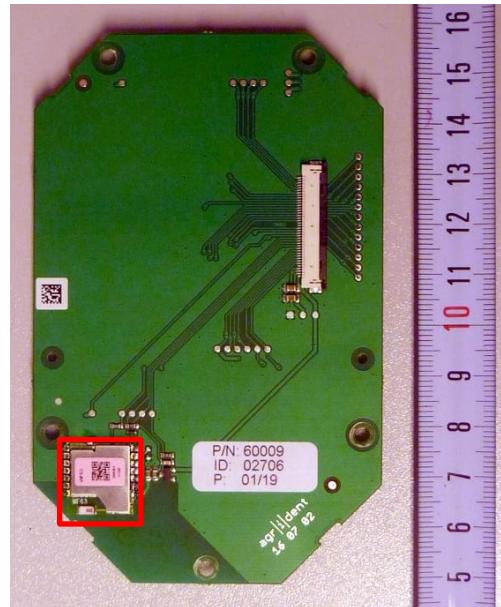

The AWR300 is available in three versions. The differences are listed in the table below.

| Device             | Contains WLAN Module *1 | Gasket Color *2 | Display Window Logo *3 |
|--------------------|-------------------------|-----------------|------------------------|
| 1243 – AWR300      | no                      | red             | Agrident               |
| 1244 – AWR300 WLAN | yes                     | red             | Agrident               |
| 1247 – AWR300 WLAN | yes                     | blue            | Tepari                 |

\*1 The only difference is the presence of the WLAN module on the display board. Beside the placement of this module, the display board is 100 percent identical for both versions. All other electronics are identical anyway.

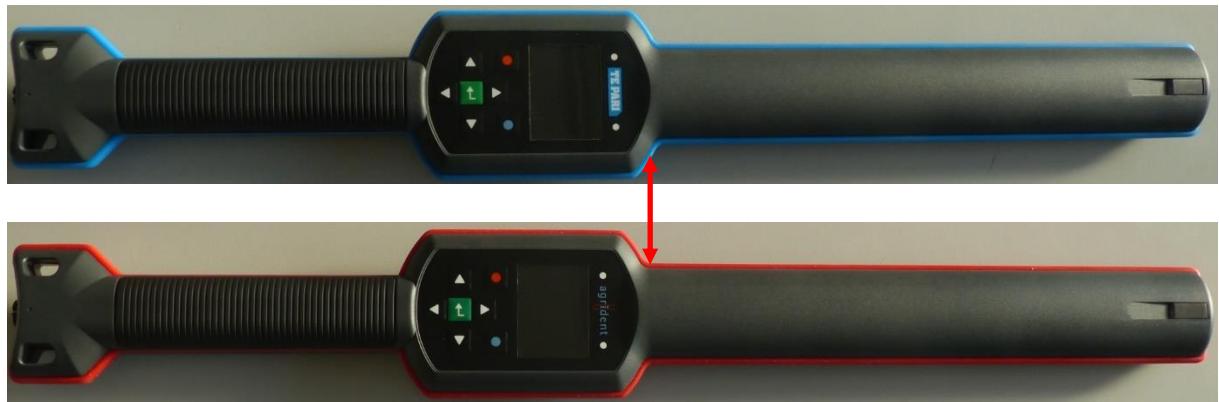

without WLAN module

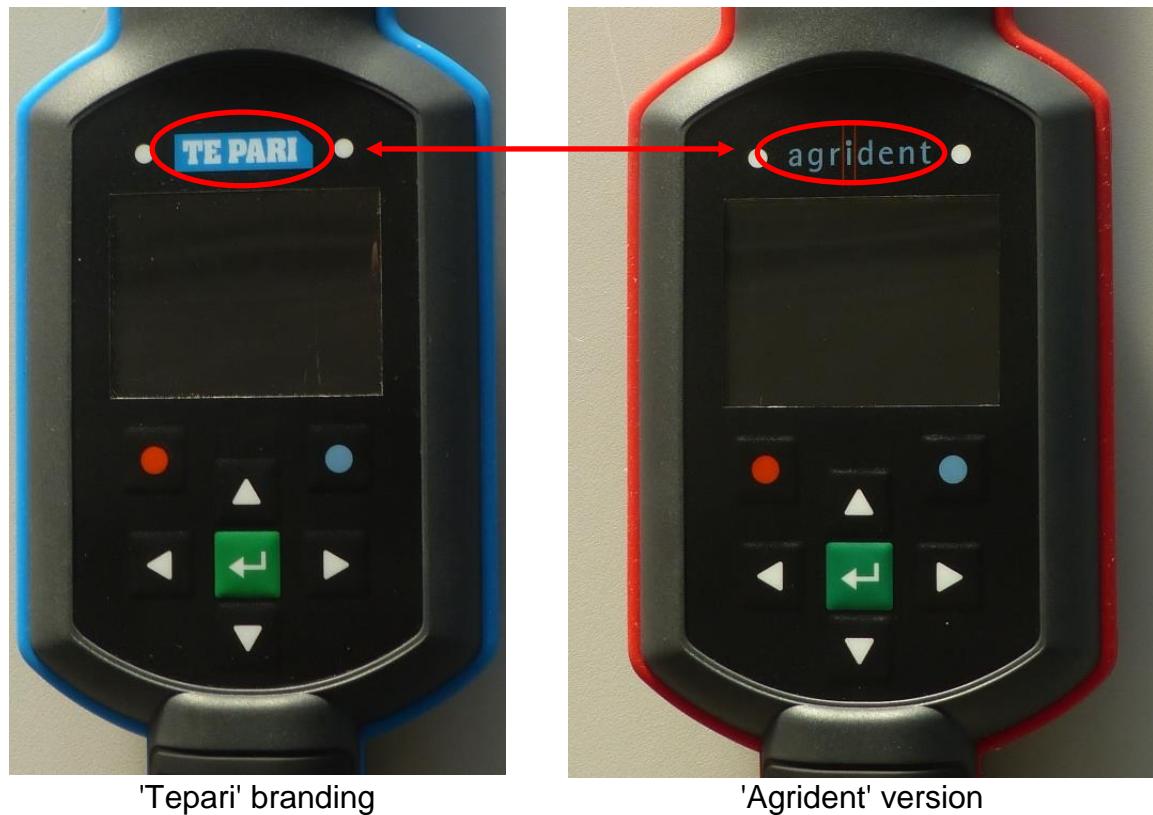

without WLAN module

The version with WLAN was tested and found to be compliant with the FCC rules, so the version without WLAN complies as well.

\*2 Only for commercial reasons, one distributor sells the AWR300-WLAN with a gasket in blue color instead of red:

\*3 For the same reason as explained in item 2, the display windows show a different logo ('Tepari' instead of 'AgriDent'):

AgriDent hereby declares that the differences stated in the document are the only ones.
