

**June 26, 2007**

**Cover Letter:  
P-379**

This report is in support of an application by Technalogix Ltd. for certification of transmitting equipment used for VHF and UHF television systems (54-806 MHz). Specifically, Technalogix is requesting certification of the Technalogix P-379 frequency agile television processor.

The P-379 accepts RF signal on any of the VHF (2 through 13) and UHF (14 through 69) channels and outputs a modulated +15 dBm peak video signal in addition to 10% aural power on any of the VHF (2 through 13) and UHF (14 through 69) channels.

All tests were carried out on representative channels in the VHF and UHF bands in accordance with FCC Part 73 and Part 74. The results in the attached documentation show that the equipment meets or exceeds the required specifications.

The emission designators based on FCC Part 74 transmitters are 5M75C3F (for visual) and 250KF3E (for aural).

Should you have any questions, please do not hesitate to contact Technalogix:
